In 1964, 15 companies were directly engaged in iron mining—one on the Island of Newfoundland, one with mines in both Newfoundland-Labrador and Quebec, two in Quebec, six in Ontario, and five in British Columbia. Two other mines in British Columbia made small shipments from stockpile. In addition, four companies shipped iron ore produced as a by-product of base-metal operations. Iron Ore Company of Canada, with direct-shipping ore deposits astride the Labrador-Quebec border at Schefferville (Que.), and concentrating-grade deposits near Labrador City (Nfld.), is the largest producer, accounting for 41 p.c. of 1964 shipments. Wabana Mines of Dosco Industries Limited, producing medium-grade sized concentrate from an underground mine on Bell Island, Nfld., accounted for 3.6 p.c. of the year's shipments. Quebec Cartier Mining Company's shipments of high-grade concentrate from its operations at Gagnon, Que., made up 26.4 p.c. of 1964 shipments, making it Canada's second largest producer; and high-grade pellets from Hilton Mines, Ltd. near Shawville, Que., accounted for another 2.6 p.c. In Ontario, Algoma Ore Properties Division of The Algoma Steel Corporation, Limited, operates mines and a sinter plant at Wawa and accounted for 5.2 p.c. Shipments of high-grade pellets by Marmoraton Mining Company, Ltd. at Marmora, and Lowphos Ore, Limited near Capreol made up 1.6 p.c. and 1.8 p.c., respectively, of Canada's 1964 total. In the Steep Rock area, Caland Ore Company Limited, Steep Rock Iron Mines Limited and Oglebay Norton Co. (Canadian Charleson Mine), producing medium-grade, direct-shipping ore and concentrate, accounted for 5.8 p.c., 3.8 p.c. and 0.5 p.c., respectively, of Canadian shipments. The five British Columbia producers, plus the two that shipped from stockpile, together shipped 5.1 p.c. of the total. By-product iron ore was produced by Consolidated Mining and Smelting Company of Canada Limited at Kimberley, B.C., and by The International Nickel Company of Canada, Limited and Falconbridge Nickel Mines, Limited in the Sudbury area. Noranda Mines, Limited shipped from stockpile at Cutler, Ont.

In 1964 several companies were preparing for iron production. In Newfoundland-Labrador, Wabush Mines neared completion of its mine and concentrator, scheduled to begin production at a designed annual capacity of 5,300,000 long tons of concentrate in 1965. An associated company, Arnaud Pellets, neared completion of a 4,900,000-ton-a-year pelletizing plant at Pointe Noire, Que., also to begin production in 1965. Jones & Laughlin Steel Corporation began production at its 1,250,000-ton-a-year pellet project at Kirkland Lake, Ont., early in 1965. A new iron mining project, similar to Jones & Laughlin's, was announced for the Temagami area, 60 miles north of North Bay, Ont.

It will have an annual capacity of 1,000,000 tons of high-grade pellets and will be 90 p.c. owned by Dominion Foundries and Steel, Limited of Hamilton, Ont. In British Columbia, Empire Development Company, Limited was preparing to resume production, and a new mine was being developed near Campbell River by Orecan Mines Limited; both should be producing in 1965. Wesfrob Mines Ltd. continued development of its iron-copper mine at Tasu Harbour on the Queen Charlotte Islands. This property will begin production of magnetite concentrates late in 1967 at an annual rate of nearly 1,000,000 tons. Several other pelletizing and mining projects were under active consideration, thus promising continued growth of the Canadian iron ore industry.

Nickel.—Canadian nickel production during 1964 was 232,875 tons valued at \$381,996,719, slightly more than in 1963. Canada is traditionally the world's leading supplier of nickel and accounts for about 80 p.c. of the non-communist world production. The leading producers—The International Nickel Company of Canada, Limited, Falconbridge Nickel Mines, Limited, and Sherritt Gordon Mines, Limited—are among the world's largest.

Near Sudbury in Ontario, International Nickel operated seven mines—the Creighton, Frood-Stobie, Garson, Levack, Murray and Crean Hill underground mines and the Clarabelle open pit. Also near Sudbury, Falconbridge operated five mines—Falconbridge, East, Hardy, Onaping and Fecunis.

In Manitoba, the Lynn Lake mine of Sherritt Gordon Mines, Limited operated at 3,900 tons daily. Nickel matte was imported to permit the Fort Saskatchewan, Alta., refinery to operate at full capacity of 14,000 tons. The company had a good market for its nickel products sold in briquette and powder forms. At the Thompson mine of International Nickel, a service shaft on the edge of Thompson Lake was being sunk and, five miles to the south, two shafts were being sunk on the Birchtree deposit, with production expected in 1968. The production capacity of International Nickel in Ontario and Manitoba is now some 225,000 tons of nickel annually. By 1967, Falconbridge will have a capacity of 50,000 tons.

Several smaller nickel mining operations made good progress in 1964. The Gordon Lake mine of Metal Mines Limited in northwestern Ontario produced about 525 tons of ore a day; a bulk nickel-copper concentrate is transported by truck to Lac du Bonnet, Man., and shipped by rail to Copper Cliff, Ont., for smelting. The Marbridge Mines Limited mine in La Motte township, Que., was operating at close to its daily capacity of 400 tons and a second shaft will increase production by 200 tons starting in mid-1965; bulk nickel-copper flotation concentrates, amounting to about 2,800 tons a month, are trucked to Falconbridge, Ont., for smelting. Lorraine Mining Company commenced production at 400 tons daily early in 1965 at its property in the Belleterre area of Quebec; indicated ore reserves to 800 feet are 550,000 tons of 2.1 p.c. combined nickel-copper. Giant Mascot Mines, Limited, near Hope, B.C., produced about 1,500 tons of ore daily, operating for 23 days each month; bulk nickel-copper concentrates are exported to Japan.

There were no price changes for nickel during the year. Prices remained at 84 cents a pound for Canada and 79 cents for the United States, both f.o.b. Port Colborne, Ont. The United States price includes import duty of $1\frac{1}{2}$ cents a pound.

Copper.—All segments of the copper industry moved ahead in 1964. Mine production at 494,017 tons was valued at \$328,233,604, an increase of 41,458 tons and \$43,829,894 over 1963. Production of refined copper increased as did domestic consumption. Mine production increased in Newfoundland, New Brunswick, Quebec, Ontario and Manitoba but decreased in Saskatchewan and British Columbia. Exploration for new copper properties and development of known deposits were proceeding in most of Canada's copper-bearing areas. New mines were brought into production in Newfoundland, New Brunswick, Quebec, Ontario, Manitoba and British Columbia and prospective producers were being developed in these provinces and in Saskatchewan. One mine, in British Columbia, was closed by a strike.

Six smelters for the reduction of copper and nickel-copper ores and concentrates are operated in Canada. In the Sudbury district of Ontario, The International Nickel Company of Canada, Limited operates smelters at Copper Cliff and Coniston, and Falconbridge Nickel Mines, Limited produces nickel-copper matte at its Falconbridge smelter. Hudson Bay Mining and Smelting Co., Limited at Flin Flon, Man., smelts concentrates from its mine in Manitoba and Saskatchewan and copper concentrates from the mine of Sherritt Gordon Mines, Limited at Lynn Lake, Man. Ores and concentrates from most of the copper mines in Ontario, Quebec and Newfoundland are smelted at the Noranda smelter of Noranda Mines, Limited and the Murdochville smelter of Gaspé Copper Mines, Limited, both in Quebec. Electrolytic copper refineries are operated by International Nickel at Copper Cliff, Ont., and by Canadian Copper Refiners Limited at Montreal East, Que. Production of refined copper in 1964 was 408,505 tons, 8 p.c. more than in 1963.

The output from Newfoundland's three established producers was augmented by that from Consolidated Rambler Mines Limited after the latter came into production in October. Total output in 1964 was 14,506 tons valued at \$9,689,729. British Newfoundland Exploration Limited was developing its Whalesback Pond mine for production in 1965 at 1,500 tons of ore a day and First Maritime Mining Corporation Limited was developing the Gull Pond property for production in 1966. The output of copper in New Brunswick continued its upward trend, rising 17 p.c. over 1963 to 10,523 tons valued at \$7,029,479. Brunswick Mining and Smelting Corporation Limited became the province's newest producer when mill tune-up started in March. The company will open two new mines and build a new lead-zinc concentrator in the Bathurst area in 1965.

The reactivation of idle capacity at the Horne mine of Noranda Mines, Limited and at the Murdochville mine of Gaspé Copper Mines, coupled with a full year's output from the mines in the Matagami area and production from new mines, brought Quebec's output to 160,288 tons of copper valued at \$107,072,207. Ten miles north of Noranda, Lake Dufault Mines Limited completed construction of a 1,300-ton-a-day concentrator and initial development of its orebody; mill tune-up started in August and the mine and plant were officially opened in October. About 60 miles north of Amos, Rio Algom Mines Limited was developing its Poirier Township mine for production, in 1966, at 1,500 tons of ore a day.

In Ontario, with the return to full production at the Sudbury mines of The International Nickel Company of Canada, Limited, copper production increased by 12 p.c. over 1963 to 201,031 tons valued at \$132,519,010. In addition to the nickel-copper mines of International Nickel and Falconbridge in the Sudbury area, Ontario's copper producers were: Rio Algom's Pater mine at Spragge; Kam-Kotia Porcupine and McIntyre-Porcupine at Timmins; Copperfield's Temagami mine at Timagami; and Wilroy and Noranda's Geco mine at Manitowadge and North Coldstream at Kashabowie. The discovery of a major zinc-copper-silver orebody, near Timmins, by Texas Gulf Sulphur Company sparked a vigorous exploration and staking rush in the area. Texas Gulf plans production from its orebody in late 1966 at 6,000 tons of ore a day.

Manitoba-Saskatchewan's two major producers, Hudson Bay Mining and Smelting Co., Limited and Sherritt Gordon Mines, Limited, had a combined output of 49,880 tons of copper valued at \$33,319,676, an increase of 6.7 p.c. over 1963. Hudson Bay operated a central mill and smelter at Flin Flon, treating ores from the Schist Lake, Chisel Lake and Stall Lake mines in Manitoba, the Coronation mine in Saskatchewan and the Flin Flon mine that straddles the Manitoba-Saskatchewan boundary. The Company continued exploration and development at its Osborne Lake and Anderson Lake mines near Snow Lake in Manitoba. Sherritt Gordon produced copper concentrates at its Lynn Lake, Man., mine for shipment to Hudson Bay's smelter, and nickel-copper concentrates for shipment to its own smelter at Fort Saskatchewan, Alta. Sherritt Gordon continued exploration of the Fox Lake copper deposit some 34 miles southwest of Lynn Lake.

Production in British Columbia decreased for the first time since 1962. At 57,506 tons the output was 8 p.c. lower than in 1963 and despite increased copper prices, the value of production in 1964 at \$38,413,747 was \$771,220 less than in 1963. The decrease in production can be attributed to the closure by flooding in December 1963 of the Sunro mine of Cowichan Copper Co. Ltd. at Jordan River, Vancouver Island, and the stoppage of operations at the Britannia mine of The Anaconda Company (Canada) Limited in August by a labour dispute. Mt. Washington Copper Co. Ltd. near Courtenay, Vancouver Island, became British Columbia's newest producer when operations started in December. Three new mines are slated for production by 1968. Western Mines Limited at the south end of Buttle Lake, Vancouver Island, will build a 750-ton-a-day mill at its Lynx mine. Production is scheduled for late 1965. Granby Mining has scheduled production from its Granisle property in Babine Lake for 1966 at 5,000 tons of ore a day. On the Unuk River north of Stewart, Granduc Mines Limited has started the driving of an 11-mile tunnel from its mine to Tide Lake preparatory to building a 7,000-ton-a-day mill and mine production at this rate in 1968. Exploration parties were active in all parts of the province. In the Stikine River area, Kennco (Canada) Limited was exploring a large low-grade copper deposit.

There was no production from the Territories in 1964 but New Imperial Mines Limited was exploring a number of copper occurrences in the copper belt just southwest of Whitehorse, Y.T.

Lead and Zinc.—Production of lead in 1964 totalled 200,385 tons, slightly less than in 1963. Major increases in New Brunswick and the Northwest Territories were offset by a decline in the output of mines in British Columbia. Refinery production at Trail, B.C., was 151,372 tons, or 3,600 tons less than in 1963. Exports of lead concentrates went to Belgium and the United States in about equal amounts with lesser amounts to Britain, West Germany, France, Japan and Mexico, totalling 80,357 tons of contained lead compared with 53,756 tons in 1963. Exports of refined lead totalling 95,867 tons went to 10 countries—Britain took 42,000 tons, the United States 30,000, Japan 9,800 and India 8,500 tons. Lead prices rose from 13 to 15.5 cents a pound during 1964.

Production of zinc in 1964 was very much higher than in the previous year due to the opening of two new mines late in 1963 and of four new mines during 1964. The total was a record 682,021 tons compared with 473,722 tons in 1963. Refinery production at the three Canadian plants at Trail, Flin Flon and Valleyfield was also higher, rising from 284,021 tons to 337,728 tons due mainly to the output of the Valleyfield plant which opened late in 1963. Exports of zinc concentrates, totalling 403,102 tons, went mainly to the United States (188,750 tons), Belgium (93,377 tons), West Germany (32,298 tons), Poland (28,356 tons) and Japan (24,384 tons). Refined zinc exports went to 33 countries and, in total, amounted to 238,076 tons. Britain took 97,991 tons, the United States 78,563 tons, the Netherlands 15,534 tons, and India 15,126 tons. Zinc prices rose from 13 to 14.5 cents a pound during 1964.

All of the Yukon Territory's production of lead and zinc was accounted for by United Keno Hill Mines Limited, which operates mines in the Mayo district some 200 miles north of Whitehorse.

British Columbia's production was mainly from the southeastern part of the province, most of it being accounted for by The Consolidated Mining and Smelting Company of Canada Limited which operates the Sullivan mine at Kimberley, the H. B. mine at Salmo and the Bluebell mine at Riondel; daily lead-zinc ore production from these three mines was, respectively, 10,000, 1,200 and 700 tons. Other large producers in this part of the province included Canadian Exploration, Limited at Salmo, Reeves MacDonald Mines Limited at Remac and Sheep Creek Mines Limited at Toby Creek. British Columbia's only producer of copper-zinc ore was The Anaconda Company (Canada) Ltd., which operates the Britannia mine some 20 miles north of Vancouver. There are a number of

smaller lead-zinc producers in British Columbia and Consolidated Mining and Smelting treats concentrates from most of these properties, as well as some Yukon Territory and foreign concentrates, at its Trail smelter.

Most of Saskatchewan's output of zinc came from the large base-metal mine at Flin Flon operated by Hudson Bay Mining and Smelting Co., Limited. This mine, which straddles the Saskatchewan-Manitoba boundary, was also the source of most of Manitoba's zinc and some of its lead. Hudson Bay also operated the Schist Lake and Coronation mines near Flin Flon, and the Chisel Lake and Stall Lake mines at Snow Lake, 90 miles east of Flin Flon. The Stall Lake mine was brought into production in February 1964. The ore from all company mines plus a relatively small amount of custom ore was treated at the Flin Flon metallurgical works for the recovery of zinc, copper and by-product metals.

In Ontario, Noranda Mines Limited (Geco Division) and Willroy Mines Limited, both at Manitouwadge, produced zinc, lead and copper concentrates; Kam-Kotia Porcupine Mines Limited at Timmins produced mainly copper concentrates and also a small tonnage of zinc concentrates. At Port Maitland on Lake Erie, zinc concentrates from Ontario and Quebec mines were roasted by Sherbrooke Metallurgical Company Limited and the resulting calcine was shipped to the United States for final treatment by Matthiessen & Hegeler Zinc Company, the owner of the Port Maitland plant.

Quebec's lead production was small in 1964 but its zinc output rose from 75,084 tons in 1963 to 228,580 tons in 1964. Production of zinc from the new Matagami Lake camp totalled 188,000 tons. A new producer in the Noranda district, Lake Dufault Mines Limited, came into operation in August 1964 and produced about 6,000 tons of contained zinc from copper-zinc ores. Other mines in Quebec were the Normetal (copper-zinc), Quemont (copper-zinc), Manitou-Barvue (copper-zinc-lead) and East Sullivan (copper-zinc), all in the Noranda-Val d'Or area; New Calumet (zinc-lead) at Calumet Island on the Ottawa River; Coniagas (lead-zinc-silver) at Bachelor Lake; and Solbec (copper-zinc-lead) in the Sherbrooke district.

New Brunswick's production rose substantially with the opening in March of the Brunswick No. 12 mine near Bathurst, which produced about 65,000 tons of zinc and 25,000 tons of lead during 1964. Brunswick Mining and Smelting Corporation Limited, which owns the mine, continued construction of a zinc-lead blast-furnace at Belledune Point, 25 miles north of Bathurst, where part of the output of the No. 12 mine will be smelted; the remainder will continue to be shipped to European smelters. Heath Steele Mines Limited near Newcastle, N.B., produced copper, lead and zinc concentrates. Nova Scotia's only lead-zinc producer is Magnet Cove Barium Corporation, at Walton. In Newfoundland regular lead-zinc-copper production continued at the Buchans mine of American Smelting and Refining Company. Consolidated Rambler Mines Limited opened a copper-zinc mine near Baie Verte in September, operating a 500-ton mill.

The highlight of exploration in 1964 was the discovery, announced in April, of a zinc-copper-silver deposit near Timmins, Ont. After preliminary drilling, Texas Gulf Sulphur Company indicated the reserve was 55,000,000 tons averaging 7.08 p.c. zinc, 1.33 p.c. copper and 4.85 oz. silver per ton, which it later confirmed. There was increased exploration at Pine Point in the Northwest Territories where the Great Slave Lake railway from Roma in Alberta to Hay River and Pine Point was opened for limited operation late in 1964. Test shipments of lead-zinc ore from the mine at Pine Point were made. Western Mines Limited continued development of a zinc-lead-copper deposit on Vancouver Island. Hudson Bay Mining and Smelting Co., Limited carried out exploration and development in the Snow Lake district of Manitoba, and Sherritt Gordon Nickel Mines Limited continued exploration of a copper-zinc deposit at Fox Lake in northern Manitoba. In Quebec, mine development proceeded in the Poirier-Joutel district north of Amos. Preparations were begun in New Brunswick for bringing the Brunswick No. 6 mine, the New Larder "U" mine, and the Nigadoo mine into production.

Gold.—Canadian gold production in 1964 decreased to an estimated 3,810,738 oz.t. valued at \$143,855,362 compared with 4,003,127 oz.t. worth \$151,118,045 in 1963. The average price for gold paid by the Royal Canadian Mint in 1964 was \$37.75 per oz.t. in Canadian funds, the same as in the previous year. On May 2, 1962, the Canadian dollar was stabilized at 92.5 cents in terms of the U.S. dollar but it can fluctuate 1 p.c. either side of the fixed value. The range in value for the Canadian dollar is thus set at \$0.916 to \$0.934 in relation to the U.S. dollar and the corresponding Royal Canadian Mint price between \$37.46 and \$38.22 per oz.t.

The Emergency Gold Mining Assistance Act (see p. 577) was extended to the end of 1967 but, despite the benefit of cost assistance, the gold mining industry is encountering increasing difficulty in continuing operations. One lode gold mine closed in 1964 as ore reserves were exhausted and a number of others were scheduled to close in 1965. Two new, but small, lode gold mines began operations in 1964 and two others operated on a minor, intermittent basis. In 1964, the proportion of gold coming from lode gold mines decreased to 81.9 p.c. from 82.5 p.c. and by-product gold from base-metal ores increased to 16.6 p.c. from 16.0 p.c. Placer gold accounted for 1.5 p.c., the same as 1963.

Ontario remained the principal producer, accounting for over 56 p.c. of the total. Quebec was second with approximately 24 p.c., followed by the Northwest Territories with 10 p.c. and British Columbia with about 3.4 p.c.

In Ontario, all the gold producing areas recorded decreases in 1964 and production declined to an estimated 2,135,269 oz.t. from 2,338,854 oz.t. in 1963. Thirty lode gold mines operated in the province in 1964, two of which were small, intermittent producers. Thirteen mines operated in the Porcupine area but one of them, Kenilworth Mines Limited, was on a very small scale. Delnorte Mines Limited closed in August. Six mines were in operation in the Red Lake-Patricia district. McKenzie Red Lake Gold Mines Limited, Cochenour Willans Gold Mines, Limited and Pickle Crow Gold Mines, Limited suffered substantial production declines. At Larder Lake, Kerr Addison Mines Limited decreased production about 15 p.c. Five mines operated at Kirkland Lake but total production was about 5.7 p.c. lower. Production at the three mines in the Port Arthur mining division declined by over 15 p.c. An estimated 62,000 oz.t. of gold was recovered as a by-product from base-metal ores in Ontario compared with 59,962 oz.t. in 1963.

Twelve lode gold mines operated in Quebec in 1964 and gold production increased about 3 p.c. to an estimated 944,941 oz.t. from 917,229 oz.t. in 1963. One new lode gold mine, Norbeau Mines (Quebec) Limited, began operations in the Chibougamau copper-gold district in September and a number of prospective gold producers were under development. Gold recovered as a by-product from base-metal ores represented about 45 p.c. of the provincial total.

In the Northwest Territories, a new lode gold mine, Tundra Gold Mines Limited, began operations in March and helped to increase total gold output by almost 4 p.c. Giant Yellowknife Mines Limited and Discovery Mines Limited, which located new high-grade ore deposits, both increased production substantially.

Two lode gold mines were in continuous production in British Columbia. Production declined sharply at Bralorne Pioneer Mines Limited but increased slightly at The Cariboo Gold Quartz Mining Company, Limited; production from the two mines was down over 12 p.c.

Manitoba and Saskatchewan together accounted for an estimated 103,611 oz.t. in 1964 compared with 117,897 oz.t. in 1963. San Antonio Gold Mines Limited, the only lode gold producer in the two provinces, improved production considerably in 1964. Most of the remaining production is derived from the base-metal ores mined in the Flin Flon area. In the Yukon Territory, all gold came from placer operations. The dredge and hydraulic operations of The Yukon Consolidated Gold Corporation, Limited at Dawson recovered about 95 p.c. of Canada's total placer gold production. Some gold was recovered in New Brunswick and Newfoundland as a by-product of base-metal production.

GOLD, SILVER, URANIUM, MOLYBDENUM AND ALUMINUM REFERENCES

ASBESTOS, POTASH AND SULPHUR REFERENCES

Uranium.—Despite the general decline of the uranium mining industry over the past five years, deliveries in 1964, at 6,914 tons of uranium oxide (U_3O_8), were about 18 p.c. lower than in the previous year (8,352 tons) and were substantially lower than the peak production year of 1959 (15,892 tons). Canada has been one of the world's leading producers of uranium since the metal became important as a fissionable material for military purposes and, more recently, in the development and production of atomic energy for electric power generation. One of the largest known deposits in the world is in Canada where present reserves represent about 35 p.c. of the total in the non-communist world.

The rapid growth of the uranium mining industry since World War II was remarkable. In 1958, Canada was the world's leading producer of uranium and the value of U_3O_8 produced in both 1958 and 1959 exceeded the value of any other Canadian-produced metal. As an export commodity, uranium ranked fourth in value in 1959 following newsprint, wheat and lumber. Production from 25 mines in that year was 15,892 tons of U_3O_8 valued at \$331,000,000. Since 1959 the decline in production, resulting from declining export markets, has been almost as rapid as the spectacular rise from 1953 to 1959. However, with the rapid development of economic nuclear power for the generation of electricity, the long-term future for the uranium industry holds considerable promise.

Practically all of Canada's uranium is sold under contract to the United States Atomic Energy Commission (USAEC) and the United Kingdom Atomic Energy Authority (UKAEA). The United States, Canada's largest customer, announced in 1959 that it would not exercise its option to purchase additional uranium from Canada. To prevent a collapse of the industry in 1962 and 1963, when the USAEC contracts would expire, the Government of Canada, through Eldorado Mining and Refining Limited, negotiated a delivery stretch-out for the uranium already under contract with the USAEC and the UKAEA. This plan also permitted the transfer of contracts between companies. In 1962, a contract was signed with the UKAEA for the delivery of 12,000 tons of U_3O_8 over a period extending until late 1971. This contract permitted each of the seven mining companies, which were still operating in 1962, to extend its operating life approximately 16.7 months past the completion date of previous commitments.

Procurement and marketing of most of the uranium produced in Canada has been the responsibility of Eldorado Mining and Refining Limited. Private producers are free to sell uranium abroad without reference to Eldorado but sales are subject to control measures administered through the Atomic Energy Control Board. Sales of uranium to countries that do not hold agreements with Canada for co-operation in the peaceful uses of atomic energy are permitted; however, the maximum amount any such country may receive from Canada is 2,500 lb.

Ore reserves as of Jan. 1, 1964, were estimated at 225,000,000 tons containing 207,000 tons of recoverable uranium oxide (U_3O_8) and about 82,000 tons of thorium oxide (ThO_2). Reserves in the conglomeratic deposits in the Blind River-Elliot Lake district of Ontario constitute 93 p.c. of Canada's total. Reserves in pitchblende-bearing vein-type deposits in the Beaverlodge Lake area of northern Saskatchewan comprise 6 p.c. and the pegmatitic deposits in the Bancroft area of southeastern Ontario make up about 1 p.c. Scheduled deliveries of U_3O_8 to the USAEC and the UKAEA from 1964 to 1971, inclusive, total 16,851 tons. By the end of 1971 Canada's reserves will be approximately 190,000 tons of recoverable U_3O_8 if no further exploration is undertaken before then. Domestic requirements of uranium for nuclear power purposes will not appreciably affect Canada's ability to export uranium in the future.

Silver.—With recovery of silver in substantial quantities commencing at several new base-metal mines in 1964 and several other producers completing their first full year of operation, Canada's silver production at 31,111,943 oz.t. was somewhat higher than 1963 output of 29,932,003 oz.t. The increase was largely the result of higher output in Ontario and initiation of by-product output from the zinc-lead-copper-silver mine of Brunswick

Mining and Smelting Corporation Limited in New Brunswick. The value of 1964 production was \$13,556,719 compared with the value of 1963 production at \$41,425,891. At the beginning of the year the price was \$1.4020 per oz.t. and at year-end it was \$1.3930; average for 1964 was \$1.4000. Of the total 1964 output, 79 p.c. was by-product derived from base-metal ores, 19 p.c. came from silver-cobalt ores mined in northern Ontario and 2 p.c. from lode gold ores mined in British Columbia, Ontario and Quebec and placer-gold ores mined almost entirely in British Columbia and the Yukon Territory.

The Consolidated Mining and Smelting Company of Canada Limited, at its refinery at Trail, B.C., produced 7,347,590 oz.t., most of which was derived from lead and zinc concentrates originating in mines in southeastern British Columbia and in the Yukon Territory. The remainder of the Canadian output of refined silver was produced from blister and anode copper by Canadian Copper Refiners Limited in Montreal East; from blister copper by The International Nickel Company of Canada, Limited at Copper Cliff, Ont.; from gold precipitates by Hollinger Consolidated Gold Mines, Limited at Timmins, Ont.; from gold bullion by the Royal Canadian Mint at Ottawa; and from arsenical-silver-cobalt concentrates by Cobalt Refinery Limited at Cobalt, Ont.

Canada's largest sources of silver are the Hector-Calumet, Keno, Elsa and Silver King silver-lead-zinc mines in the Yukon Territory about 200 miles north of Whitehorse, operated by United Keno Hill Mines Limited, and the Sullivan lead-zinc-silver mine at Kimberley, B.C., operated by The Consolidated Mining and Smelting Company of Canada Limited. In the 15-month period ended Dec. 31, 1964, United Keno produced concentrates containing 7,270,911 oz.t. and in 1964 Consolidated Mining and Smelting produced concentrates at the Sullivan mine containing 2,897,791 oz.t. Other important producers of by-product silver included Mastodon-Highland Bell Mines Limited at Beaverdell in southern British Columbia; Hudson Bay Mining and Smelting Co., Limited at Flin Flon, Man.; Noranda Mines Limited (Geco Division) at Manitouwadge, Ont.; The International Nickel Company of Canada, Limited at Sudbury, Ont.; Brunswick Mining and Smelting Corporation Limited near Bathurst, N.B.; and American Smelting and Refining Company (Buchans Unit) in Newfoundland. In the Cobalt and Gowganda areas of Ontario a number of firms mined silver-cobalt ores from which 5,920,900 oz.t. of silver were recovered in 1964.

Platinum Metals.—Canadian production of the platinum metals in 1964 amounted to 374,988 oz.t., valued at \$25,196,159. This slight increase over the previous year resulted from increased 1964 nickel production; platinum metals are recovered as a by-product of nickel mining. The group consists of platinum, palladium, rhodium, ruthenium, iridium and osmium; all except osmium are produced in Canada. World markets for platinum metals were very strong in 1964. In the past several years, world production has been about evenly divided between Canada, the Republic of South Africa and the U.S.S.R. In 1961, sales by the U.S.S.R. to the non-communist world virtually ceased, causing a wide difference between the official platinum price, about \$90 an oz.t., and the free market price, up to \$140 an oz.t.

Platinum metals occur in Canadian nickel ores to the extent of about 0.025 oz.t. per ton of ore. In the treatment of these ores for nickel, the platinum metals follow nickel and are eventually removed as sludges from the electrolytic tanks in which nickel anodes have been formed. The sludge is purified and sent to precious metal refineries in Britain and the United States for recovery of the platinum metals. All of Canada's platinum metals production results from the treatment of nickel ores of the Sudbury district of Ontario and the Thompson mine in Manitoba.

Cobalt.—Cobalt is derived as a by-product from the smelting and refining of nickel-copper ores of Sudbury, Ont., and Lynn Lake, Man.; from nickel ores of Thompson, Man.; and from silver ores of Cobalt, Ont. International Nickel recovers cobalt from its refinery operations at Port Colborne, Ont., Thompson, Man., and Clydach, Wales, based on its Sudbury and Thompson ores. Falconbridge Nickel produces electrolytic cobalt in the

refining of nickel-copper matte exported to its refinery at Kristiansand, Norway. Sherritt Gordon recovers cobalt as a by-product at its nickel refinery at Fort Saskatchewan, Alta., from its Lynn Lake nickel-copper ores. Cobalt Refinery Limited at Cobalt, Ont., recovers black cobalt oxide and mixed cobalt and nickel oxide from silver concentrates. Eldorado Mining and Refining Limited has developed a process for the recovery and purification of cobalt, nickel and arsenic from silver-cobalt concentrates. Total Canadian production in 1964 was 3,196,322 lb. valued at \$6,484,255.

Columbium.—St. Lawrence Columbium and Metals Corporation continued to be the only Canadian producer of columbium concentrates. Mine production in 1964 amounted to 2,250,000 lb. of contained Cb_2O_3 in pyrochlore concentrates valued at \$2,305,000. The company's mine is near the town of Oka, 20 miles west of Montreal. Quebec Columbium Limited and Columbium Mining Products Limited also own large pyrochlore deposits in the Oka area. Masterloy Products Limited, Ottawa, Ont., is the only Canadian manufacturer of ferro-columbium, which is sold in Canada and the United States.

Molybdenum.—Molybdenum production in 1964 amounted to 1,278,404 lb. of contained Mo in molybdic oxide (MoO_3) and molybdenite (MoS_2) concentrates valued at \$1,789,234. Production came from the Molybdenite Corporation of Canada Limited's mine at Lacorne, Que., and the Gaspé Copper Mines Limited's mine at Murdochville, also in Quebec, and from the Bethlehem Copper Corporation's mine in the Highland Valley of British Columbia. Molybdenum is recovered as a primary product at the Lacorne mine and as a by-product of copper operations at the other two mines.

During 1964, preproduction work was carried out at the properties of Preissac Molybdenite Mines Limited and that of Anglo-American Molybdenite Mining Corporation; both properties are in Preissac Township, about five miles north of Cadillac, Que. Also in 1964, Noranda Mines Limited prepared its Boss Mountain property in British Columbia for production, and Endako Mines Limited prepared its property at Endako, B.C.; both mining operations were scheduled to commence by mid-1965. The Boss Mountain mine will produce about 3,000,000 lb. of contained Mo in concentrates a year and the Endako mine will produce about 10,000,000 lb. a year.

Selenium and Tellurium.—Selenium production in 1964 totalled 448,750 lb. valued at \$2,213,182, 4 p.c. lower than in 1963; tellurium output at 79,789 lb. valued at \$508,830 was about 4 p.c. higher than in 1963. These metals are recovered from the anode muds resulting from the electrolytic refining of copper at the plants of Canadian Copper Refiners Limited at Montreal East, Que., and International Nickel at Copper Cliff, Ont.

Magnesium.—The only Canadian producer, Dominion Magnesium Limited, is also the only Canadian source of calcium and thorium. Dolomite of exceptional purity is quarried and reduced to magnesium by the ferrosilicon method at Haley, Ont. In 1964, magnesium production was 9,021 tons. Expansion of the smelter from 10,000 to 11,000 tons annual capacity will be completed in 1965. Canadian consumption of primary magnesium is about 3,600 tons, including imports; a further 400 tons of semi-fabricated forms are imported.

Titanium.—Ilmenite, an iron-titanium oxide, is mined in the Allard Lake and St. Urbain areas of Quebec. The Allard Lake ore, mined by Quebec Iron and Titanium Corporation, is smelted by the company in electric furnaces at Sorel, Que., to produce high-titania slag and pig iron. The slag is sold to producers of titanium-based pigments in Canada, the United States, Britain, Japan and other countries. Ilmenite mined at St. Urbain by Continental Titanium Corporation is used as heavy aggregate in weighting oil and gas transmission pipelines and in shielding nuclear reactors. The value of titanium-bearing materials shipped in 1964 as ore, heavy aggregate and titanium-bearing slag was at an all-time high of \$20,981,935, which compares with \$13,806,608 in 1963.

Aluminum.—Canada is second, after the United States, in non-communist world aluminum production. At the end of 1964 annual capacity was 913,000 tons but capacity for a further 20,000 tons was under construction at the Kitimat, B.C., smelter of Aluminum Company of Canada Limited. This Company also has smelters at Arvida, Isle Maligne, Shawinigan and Beauharnois, all in Quebec. Canadian British Aluminium Company Limited operates a smelter at Baie Comeau, Que., with an estimated capacity of 105,000 tons. As all bauxite or alumina used by the aluminum smelters must be imported, mainly from the Caribbean area, metal production is classed in official statistical data with manufactures and not with smelter production of ores and metals of domestic origin. Production of primary aluminum in 1964 was 842,640 tons, of which 627,992 tons were exported. Domestic consumption was estimated at about 175,000 tons as measured at the semi-fabricated level. Of this amount 18,054 tons were exported.

Subsection 2.—Industrial Minerals

The 1964 production of industrial minerals in Canada was at a record high for the sixth consecutive year. Producer shipments of non-metallic minerals, clay products and other structural materials of mineral origin were valued at \$687,300,000, almost 9 p.c. higher than for the previous year, and represented 20 p.c. of the total mineral production. New production records were established for asbestos, cement, gypsum, nepheline syenite, potash, salt, sodium sulphate and sulphur. Important developments taking place during 1964 in the production and marketing of asbestos, potash, silica sand, sulphur and certain structural materials are reviewed in this Subsection.

Asbestos.—In 1964, for the fifth consecutive year, Canadian shipments of asbestos established an all-time high: 1,377,079 tons of fibre valued at \$148,370,312 were shipped to the markets of the world, an increase of 8 p.c. over 1963. Quebec, which produces almost 90 p.c. of the Canadian output, British Columbia and Newfoundland contributed to the increase. Shipments in Ontario, the only other producing province, were lower than in 1963. The principal grades were in good demand during the year.

World production for 1964 is estimated at 3,500,000 tons, having doubled in a ten-year period. A substantial part of this increase is attributed to a rapid rise in the U.S.S.R. where production is estimated to be 1,500,000 tons, slightly ahead of the Canadian output. Traditionally, the U.S.S.R. asbestos industry has been located at Sverdlovsk in the Urals but two other important areas have been under development for some time and a new mine near Kiembi, Kazakhstan, about 300 miles south of Sverdlovsk, is expected to begin operation in 1965. A deposit at Aktrovak in Tannu-Tuva is also being prepared for early production. These developments will provide a major increase in the U.S.S.R.'s production capability for asbestos fibre. While Soviet Union consumption is expected to rise with the addition of new asbestos-cement producing facilities currently under construction, there is speculation that exports will also increase.

In Quebec, Asbestos Corporation Ltd., the second largest producer of Canadian asbestos, acquired the assets of Johnson's Co. Ltd. and Johnson's Asbestos Company operating the Johnson mine at Thetford and the Magnetic pit at Black Lake. Johnson's have had a continuous record of production for over eighty years. The consolidation, will enable certain production economies to be achieved in the two producing areas. Asbestos Corporation, early in the year, exercised its option to acquire the Asbestos Hill deposit of Murray mining Corporation Limited, 40 miles south of Deception Bay in northern Quebec. Over the past few years exploration and development of this deposit have established a substantial reserve of commercial-grade fibre.

The only producing asbestos mine in Ontario (Munro, of Canadian Johns-Manville Company, Limited, located near Matheson) ceased operation on July 31. This mine has been a source of fibre for the asbestos-cement industry since 1950. The same company

has in hand an extensive exploration and development program in Reeves Township, about 40 miles southwest of Timmins. Underground development work is proceeding to prove up the orebody and facilitate bulk sampling of the deposit.

In British Columbia, Cassiar Asbestos Corporation Limited increased mill capacity to 1,700 tons a day, providing additional equipment for recovery of other asbestos-cement fibre grades. The company continued its exploration program at Clinton Creek, adding to the reserves of this promising deposit.

Potash.—During 1964 world potash demand increased at a higher rate than in past years until it exceeded output. Despite high production by all suppliers, inventories were reduced and shortages were reported in overseas markets. In North America supplies were barely sufficient to serve domestic and some export demands. Except for full-scale production and increased capacity at the Esterhazy plant of International Minerals and Chemical Corporation (Canada) Limited, shortages would have occurred in North America and would have been more serious in overseas markets. This plant is estimated to have exported more than 700,000 tons K_2O in 1964 with a value of about \$20,000,000.

The success of the Esterhazy project and the rising demand for potash throughout the world served to encourage new development in Saskatchewan. In mid-1964, Kalium Chemicals Limited started operating its new solution mining complex 25 miles west of Regina and in late September, at the formal opening of the plant, shipped two trainloads of potash totalling some 7,000 tons. Potash Company of America was completing plant alterations and plans to resume production early in 1965. In addition, new deep potash shafts were being sunk by International Minerals at Gerald, by Alwinsal Potash Corporation of Canada Limited near Lanigan and by United States Borax and Chemical Company at Allan and it is expected that other potash projects will be announced during 1965. The 24 companies holding potash rights in Saskatchewan and Manitoba at the end of 1964 had about 4,000,000 acres under permit and lease. To the companies now considering but not yet committed to potash development in Saskatchewan, the vital consideration is to accurately assess the future growth in world potash demand; this is expected to be in the order of 13,000,000 tons K_2O in 1965, 16,000,000 tons in 1970 and 20,000,000 tons or more in 1975. Recent data tend to suggest that even these estimates are conservative in that consumption of potash has increased from 10,600,000 tons in 1962 to 11,600,000 tons in 1963 and to an estimated 13,000,000 in 1964. Assuming that these projections are realistic and considering that productive capacity should be possibly 20 p.c. in excess of expected demand, projected capacities should then be about 15,600,000 tons in 1965, 19,200,000 tons in 1970 and 24,000,000 tons in 1975. Of these totals, Canadian capacity is expected to be about 1,600,000 tons in 1965, 5,500,000 tons in 1970 and 8,700,000 tons in 1975.

Considering these world potash requirements and the vast reserves of high-quality material available in Canada, the major industry being developed is both necessary and timely. It is possible that the most optimistic suggestions about future production in Saskatchewan will prove to be low.

Silica Sand.—Canada has always been heavily dependent on imported silica sand, chiefly from northeastern United States, for the bulk of its requirements. The chief consumers, glass and silicon carbide manufacturers and steel foundries, are located principally in southeastern Quebec and southern Ontario where there are no naturally occurring high-quality sand deposits. However, two domestic producers are assuming an increasingly important role in providing high-quality sand for the Quebec market—Industrial Minerals of Canada, Limited, operating a deposit of Potsdam sandstone at St. Canut, Two Mountains County, Que., and Dominion Industrial Mineral Corporation, operating a deposit of friable quartzite at St. Donat, Montcalm County, Que. Industrial Minerals, in 1964, completed an extensive investigation of silica deposits in the area south and west of Montreal and late in the year acquired a controlling interest in Canadian Silica Corporation Limited, the largest producer of silica sand in Canada. Dominion Industrial Mineral

Corporation, in a move to consolidate operations, sold its silica milling plant at Lachine, Que., and embarked on a \$1,000,000 expansion program at St. Donat, which will include a wet silica processing plant that, when completed in 1965, will have a rated output of 360,000 tons of products annually.

Sulphur.—The major part of Canadian elemental sulphur production is derived from "sour" natural gas in Western Canada. During 1964 elemental sulphur was produced at 15 plants in Alberta, at one plant in British Columbia and at one in Saskatchewan. Minor amounts are obtained during the refining of oil and base metals at plants in Ontario and Manitoba. The marked increase in elemental sulphur production and the decrease in pyrite sulphur, especially since 1960, is clearly shown by the accompanying chart.

CANADIAN SULPHUR PRODUCTION, 1955-64

Total production capacity is about 2,100,000 tons a year and preliminary estimates indicate that production in 1964 was about 1,600,000 tons. The completion of three new plants and expansion at another plant will increase capacity to more than 2,500,000 tons in 1965.

During 1963 and 1964, world sulphur consumption increased at a higher than normal rate mainly due to increased demand for fertilizer but also to expanding needs in a multitude of other industries. This increased demand has created a situation in which sulphur stockpiles are becoming depleted and prices are rising. Canada occupies a strong position in the world sulphur industry. A large proportion of domestic needs are served by smelter gas and consequently most of the elemental sulphur production is exported. Because Canadian elemental sulphur is largely a co-product of natural gas production, the unit cost is believed

to be considerably lower than that of sulphur from other sources, allowing Canadian sulphur to compete in world markets despite relatively high transportation charges. In 1963 more than 820,000 tons of sulphur were exported to 14 foreign countries and during the first nine months of 1964 more than 1,000,000 tons were exported to 21 countries.

Construction Materials.—The total value of construction in Canada reached an all-time high in 1964, notable increases being shown in industrial construction in the western provinces and Quebec. Keeping pace, the output of mineral products used in construction attained a record level.

Since the industrial development of Canada has resulted in an increasing demand for low-cost electric energy, large hydro-electric power developments are under construction in Quebec, British Columbia, Saskatchewan and Manitoba, all of them consuming vast quantities of cement, sand and gravel, and crushed stone.

In the concrete aggregate field, manufactured sand and stone are becoming increasingly important as suitable natural sand and gravel deposits become depleted. Because specifications for aggregate are becoming more rigid, greater attention to beneficiation and processing methods is necessary to meet customer requirements and to offset higher labour and equipment costs.

Exposed aggregate applications in slab, panel and block shapes are gaining in popularity. The demand for new colours and methods of expression has created a need for additional sources of rocks suitable for the production of vari-coloured, exposed aggregate panels and tiles. These panels are used for walls, patios and as pavement blocks in both interior and exterior applications. Quartz, limestone, marble and granite are commonly used as aggregate. Other colourful rocks such as sodalite, amazonite, rose quartz, black to grey anorthosite, and various colours and varieties of marble and granite are used for terrazzo and granox-type tile and panel manufacture. In addition to the usual cement-bonded terrazzo and granox products, these items are now being produced with plastic binders. Specially constructed panels, containing wear-resistant chips and aggregates of slag, emery or other grit bonded in plastic, are being used in stain-, heat- and abrasion-resistant applications.

New textured and coloured granites and marbles are now appearing on the market. Some of the more recent additions in this field are green granite from the Rivière à Pierre area of Quebec; fine-grained black granite from north of the Peribonca River in Quebec; and fine-grained, tough, black granite from River Valley in Ontario.

Cement.—Another year of record production was registered by Canada's cement industry in 1964. Production was 10 p.c. greater than in 1963. This increase was the result of additional requirements for general construction and for large dam projects, particularly the Manicouagan in Quebec and the Peace River in British Columbia.

Major expansion in productive capacity took place during the year: two additional kilns were added to existing plants—one by Canada Cement Company, Limited at Fort Whyte, Man., and the other by St. Mary's Cement Co. Limited at St. Mary's, Ont.; expansions representing a total increase of 4,500,000 bbl. of annual output were under way at three plants—the Villeneuve, Que., plant of St. Lawrence Cement Company, the Picton, Ont., plant of Lake Ontario Portland Cement Company Limited, and the Corner Brook, Nfld., plant of North Star Cement Limited. Construction of Nova Scotia's first cement plant was started by Canada Cement Company at Brookfield, and Inland Cement Company Limited started construction of a new plant at Tuxedo, Man.; the latter also purchased a partially completed plant at Rosser, Man., from British-American Construction Company. Expansions of the Havelock, N.B., plant of Canada Cement Company and of the Montreal plant of Miron Company, Ltd. are planned for 1965 and new plants are scheduled for Joliette, Que., by Independent Cement Incorporated and for Prince George, B.C., by Peace River Cement Company Limited.

Ceramic Materials.—Several interesting and important expansions in the domestic ceramic industry were noted during the year. New clay preparation equipment and several tunnel kilns were added or are being considered to meet an increasing demand for brick and other ceramic products. Clayburn-Harbison Ltd., Vancouver, completed a new tunnel kiln for firing pressed face brick at its Abbotsford plant. The company has introduced a new "giant" pressed clay brick which is similar in size and structure to the common concrete block. This brick is being successfully marketed in the Vancouver and Seattle areas. A new tunnel kiln for use in the manufacture of facing brick from local raw materials was completed at Brique Citadelle Ltée's Beauport plant in Quebec, production from which will supplement that from two tunnel kilns and a continuous kiln at the company's Boischatel plant. The tunnel kilns at Boischatel are used for firing buff facing brick manufactured from imported clay. New clay preparation equipment has been added by East Angus Brick and Tile, Inc., at East Angus, Que., and by Estevan Clay Products at Estevan, Sask.

Medicine Hat Brick and Tile Company Limited plans to build a tunnel kiln plant to produce pressed facing brick at Redcliff, Alta., and a second plant at Winnipeg to manufacture brick and tile. Sunburst Ceramics Ltd. has introduced several novel processing methods at its Medicine Hat plant, including a "Ram" process for the production of ceramic ware and the firing of ceramics by an envelope kiln.

Output from a new glass container plant nearing completion at Burnaby, B.C., being built for Dominion Glass Company, Ltd., together with that from Dominion Glass Company's plant at Redcliff, Alta., the only other glass container plant in the four western provinces, should adequately supply the western market for many of the common varieties of glass containers.

Subsection 3.—Petroleum and Natural Gas

Most segments of the Canadian oil and gas industry, from field production through transportation to marketing, had a good year in 1964. Production of crude oil averaged 750,000 bbl. a day compared with 710,000 in 1963. In addition, the propane, butane and pentanes-plus derived from natural gas contributed 105,000 bbl. daily to the liquid hydrocarbon supply. Thus total liquid hydrocarbon output of oil and gas field facilities amounted to 855,000 bbl. a day, an increase of 9 p.c. over 1963. Production of natural gas continued to increase at about the same rate as in 1963. Net production amounted to 3,600,000 Mcf. daily, 19 p.c. greater than 1963 output.

Production of crude oil and natural gas liquids increased in all the major producing provinces except British Columbia, where output decreased 6 p.c. Production in Alberta increased 8 p.c.; in Saskatchewan 14 p.c.; in Manitoba 17 p.c.; and in Ontario 3 p.c. Alberta held its position as the predominant producer, supplying 577,000 bbl. daily, or 67.4 p.c. of Canadian liquid hydrocarbon output. Saskatchewan production accounted for 26.4 p.c. and British Columbia for 4 p.c. Manitoba, Ontario, Northwest Territories and New Brunswick produced the small remainder. In Alberta, crude oil output was equivalent to less than half of the province's productive capacity but in the other provinces production was at near-capacity rates. Alberta was also the major producer of natural gas, accounting for 87 p.c. of Canada's net production.

The Alberta government announced a new crude oil proration plan, which is to become fully effective in 1969. The general effect of the plan will be to increase production from pools of large reserves and high productivity, while tending to discourage the development of marginally economic oil areas. The Saskatchewan government passed new legislation designed to encourage exploration in the province, particularly in the deeper strata, by allowing less restrictive land selection to companies making oil or gas discoveries and by providing a royalty-free period for discoveries below the top of Devonian strata.

Exploration and development drilling for oil and gas totalled 16,100,000 feet in 1964. The 15,600,000 feet drilled in Western Canada was 10 p.c. more than the 1963 total, and just short of the all-time record established in 1956. Development drilling, constituting

PETROLEUM AND NATURAL GAS REFERENCES

MAIN PRODUCING AREAS

- | | | |
|-------------------|--------------------------------|------------------|
| 1. Redwater | 2. Leduc-Woodbend, Bonnie Glen | 3. Pembina |
| 4. Swan Hills | 5. Kaybob | 6. Harmatton |
| 7. Joarcam | 8. Turner Valley | 9. Sturgeon Lake |
| 10. Boundary Lake | 11. Lloydminster | 12. Fosterton |
| 13. Coleville | 14. Weyburn | 15. Virden |

62 p.c. of drilling in Western Canada, increased moderately but exploratory drilling increased sharply. Discovery of a large oil field just southeast of Lesser Slave Lake early in 1964 was a major factor in the expanded exploratory activity as was the defining of large new gas reserves in north-central and west-central Alberta.

The gradual year-by-year decline in geophysical activity that has been evident during the past decade continued in 1964, although the decline was slight. While less field work is now being done than in earlier years, more time and money is being devoted to interpretation of field data. Geophysics is considered of limited value only in the search for certain types of oil reservoirs such as the stratigraphic traps of the Gilwood sand of the Lesser Slave Lake region. However, one area of recent activity where geophysics was indispensable was the Cutbank River region south of Grande Prairie, Alta., where deep Devonian gas-bearing reefs were delineated by seismic methods. In terms of crew-months, seismic survey work in Western Canada was as follows: Alberta, 394; Saskatchewan, 57; British Columbia, 85; Manitoba, 2; and Yukon and Northwest Territories, 57. Gravity surveys are used to only a small degree in Western Canada but the use of this type of survey has increased in the past two years. The gravity method still remains the chief geophysical tool in the southwestern Ontario petroleum region.

The increase in Canada's crude oil reserves was the largest in many years. Reserves of crude oil and natural gas liquids at the end of 1964 were 7,065,000,000 bbl., or 26 p.c. more than in the preceding year. A major portion of this addition was due to extensions and revisions of known oil occurrences, particularly because of widespread implementation of waterflood recovery programs. Net additions to reserves of natural gas in 1964 were the largest ever. A 17.4-p.c. increase raised total Canadian gas reserves to 43,400,000,000 Mcf. at the end of 1964.

Alberta.—Drilling in Alberta totalled 10,300,000 feet in 1964, 5.4 p.c. more than in 1963. Exploratory drilling, comprising 38 p.c. of the total footage, increased significantly but development drilling declined slightly. The main areas of oil-field development were in the House Mountain, Deer Mountain and Goose River fields in north-central Alberta, and in the Bantry-Taber heavy-oil region in southeastern Alberta. Expansion continued at established gas fields, such as Medicine Hat, in southeastern Alberta. Waterflood pressure maintenance projects were brought into effect in several oil fields, including fields in the Swan Hills regions where waterflooding is expected to increase eventual recovery of the original oil in place from the 17 p.c. possible by primary depletion to 40 p.c. Reserves of recoverable crude oil and natural gas liquids were increased from 4,847,000,000 bbl. in 1963 to 6,114,000,000 bbl. at the end of 1964. Much of this increase was due to recalculation of reserves taking into account new waterflood projects. New discoveries accounted for only a small proportion of the increase although eventual delineation of these new oil pools with further drilling will substantially increase reserves, particularly in the Mitsue area near Lesser Slave Lake. This area was the centre of exploratory activity in 1964. The productive horizon, the Devonian Gilwood sandstone, had not hitherto been known to be oil-productive. As a result of intensified exploration, several more Gilwood sand oil pools have been found near Lesser Slave Lake. Large reserves of natural gas were outlined in the Edson region, 130 miles west of Edmonton, and in the Marten Hills, 140 miles north of Edmonton. Important new discoveries of wet natural gas were made south of Grande Prairie.

The first commercial production of oil from the Athabasca bituminous sands is scheduled to begin by October 1967. Construction began on the first full-scale plant for the extraction of oil from the sands following the approval of the application of Great Canadian Oil Sands Limited for a \$190,000,000 project to extract 45,000 bbl. a day of synthetic crude oil from the sands.

Saskatchewan.—For the second successive year, drilling increased sharply in Saskatchewan—by 31 p.c. to a total of 4,200,000 feet. The increase was mainly in the

exploratory category. More lenient regulations concerning land acquisition and production royalties were instituted during 1964 and, as a result, exploration has intensified. Also, a capacity demand for Saskatchewan medium and light crude oil in the Great Lakes region has promoted the oil search. Estimated oil reserves were increased slightly to 610,000,000 bbl., mainly because of the implementation of a waterflood project in the Weyburn field. There were no important new oil discoveries. Of the 1,254 wells completed, 636 were oil wells, 30 were gas wells and 588 were dry.

British Columbia.—Drilling continued to decline in 1964 for the second successive year. No major new oil fields have been discovered during the past few years and this partly accounts for the decrease in drilling, particularly since development of existing fields has been largely completed. A medium-sized oil pool of good productivity, named the Nancy field, was discovered 50 miles north of Fort St. John, just west of the Peejay field and subsequent petroleum exploration and development centred in that area. Farther north, near Fort Nelson, the Clarke Lake gas field, the largest in the province, was prepared for production in order to supply the new gas pipeline connecting to markets in south-western British Columbia. Several important natural gas discoveries were made in the general region of Kotecho Lake. A total of 674,800 feet was drilled in the province; 45 oil wells, 37 gas wells and 60 dry wells were completed.

Manitoba.—During the past decade, the low point of drilling activity in Manitoba was reached in 1962 but since then has increased rapidly and, in 1964, the total footage drilled was the greatest since 1957. Of the total 241,200 feet drilled, 67 p.c. was development and the remainder exploratory. No important oil discoveries were made. One interesting aspect of petroleum exploration in Manitoba was the acquisition of oil shale permits by several oil companies covering several million acres along the Manitoba escarpment of western Manitoba and the adjacent Pasquia Hills region of Saskatchewan. These deposits of low-grade oil shales are being investigated.

Yukon and Northwest Territories.—Eighteen wells were drilled in the Territories compared with six in 1963. The total footage of 113,100 feet was of an exploratory nature. Three gas discoveries were made—one in the Eagle Plains area of the Yukon Territory, one at Beaver River just north of the British Columbia Boundary in the Yukon, and one at Island River in the Northwest Territories just north of British Columbia's Petitot River gas field. The third Arctic Island well, on Bathurst Island, was completed in February 1964, after reaching a depth of 10,000 feet. No important occurrences of oil or gas were found.

Eastern Canada.—In Ontario, 216 wells were completed, of which 33 were oil wells, 55 were gas wells and 128 were dry. Aggregate footage drilled (excluding service wells) was 431,100 feet, 10 p.c. more than in 1963. There were no oil discoveries as important as the 1962 find at Clearville. Four exploratory oil wells and three exploratory gas wells were completed. In addition, 29 oil wells and 52 gas wells were completed in established fields and pools. The development of secondary recovery facilities in the Rodney field resulted in increased production there. A new offshore 'land play' developed in Hudson Bay when most of the southwestern quarter of the Bay, or about 55,000,000 acres, were taken out under exploration permits by several companies. At least one company plans extensive geophysical testing of its offshore holdings.

In Quebec, 10 exploratory wells were drilled but all were dry. No development drilling was carried out at the Pointe du Lac gas field, the site of intensive drilling two years

ago; as yet there has been no commercial gas production from the field. In the Atlantic Provinces, only one well was drilled; this was completed as a dry hole at a depth of 9,853 feet near Pugwash, N.S. Exploration permits covering huge areas of the continental shelf were taken out by several companies. Two main areas are held—the shelf off Nova Scotia extending to just beyond Sable Island and the Grand Banks off Newfoundland. A Federal Government survey recorded a negative gravity anomaly near Cape Breton Island and permits covering the area were issued to a large oil company. During the summer of 1964, considerable seismic reconnaissance was done off Nova Scotia.

Petroleum Refining and Marketing.*—In no other phase of operations has the petroleum industry been more fully developed as in the refining sector. For years prior to 1947, when the Leduc oil discovery was made in Alberta, the refining capacity remained almost steady between 220,000 and 245,000 bbl. daily. Most plants were outmoded and much of the refined products were imported. Marked expansion of facilities followed the Leduc and subsequent oil discoveries, first in the Prairies and then in Ontario and British Columbia as pipelines were built to carry crude to these areas. During the decade of the 1950's modernization of facilities transformed the Canadian refining industry into one of the most modern in the world and expansion of facilities needed to meet the growing demand brought its aggregate capacity to the point where it ranked the third largest in the world after the United States and the Soviet Union. More recently, facilities in other countries such as Japan and the major nations of western Europe have been expanded so that in 1965 Canada's refining industry ranked eighth in terms of crude oil capacity. Table 1 gives, on a regional basis, the growth of the industry to its present size.

**1.—Petroleum Refining Throughput Capacity, by Region,
as at Jan. 1, 1945, 1955 and 1965**

Region	1945		1955		1965	
	bbl./day	p.c.	bbl./day	p.c.	bbl./day	p.c.

Canada.....	231,215	100.0	618,450	100.0	1,052,510	100.0

Location has, understandably, a controlling effect on the sources of crude oil that are used. Thus, before large volumes of oil were found in the Prairies, refineries in provinces from Ontario westward depended for the bulk of their oil on the United States and those in the Atlantic Provinces and Quebec relied on the water-borne crudes from the Caribbean and Middle East regions. The eastern region of Canada still relies on the same sources but elsewhere the use of Canadian crude is predominant.

During the same time not only have refineries in Western Canada stopped taking United States oil, but Canadian crude oil has been finding export markets in a number of refining centres. Plants in the Puget Sound region took an average of about 137,000 bbl./day and those in the area east of the Rocky Mountains in the United States took about 141,000 bbl./day. Table 2 shows the regional demand for domestic and foreign oils.

* See also Chapter XIX, Part VI.

Natural Gas Processing and Marketing.—Most natural gas found in Canada contains significant quantities of liquid hydrocarbons such as propane, butane, and pentanes-plus or 'natural gasoline'. In addition, a large percentage also contains hydrogen sulphide which is toxic and must be removed but which is easily processed into elemental sulphur. It is worthwhile to recover these valuable accessories to natural gas but it is also important that customers receive a gas that has consistent qualities. Hence a large and intricate gas processing industry has been developed in Canada within the past decade which has involved the outlay of capital totalling in excess of \$325,000,000. Ninety-five plants were operating at the beginning of 1965, 84 of them located in Alberta. Total raw gas capacity of plant was 5,165,000 Mcf. daily. As an indication of the importance of the industry, over 84 p.c. of the marketable gas produced in Alberta, which supplies the bulk of natural gas, came from gas processing plants.

Of the 1,136,000,000 Mcf. of gas supplied by Canada in 1964, 404,000,000 Mcf. was exported to the United States, 505,000,000 Mcf. was sold in Canada and the remaining 227,000,000 Mcf. was used in processing plants, pipelines and the like. In other words, total domestic consumption amounted to 732,000,000 Mcf.

Table 3 shows sales of natural gas in Canada and indicates the significant part that natural gas plays in meeting Canadian energy requirements. During 1964, natural gas supplied roughly 17 p.c. of total energy requirements in Canada.

Subsection 4.—Coal*

Production from Canadian coal mines in 1964 was 7 p.c. higher than in 1963, giving some encouragement to the hard-pressed coal industry. Significant increases in the production of coals of all types and particularly subbituminous and lignite were attained and productivity per man-day increased in some coal mining regions, leading to lower or relatively steady values for all coals.

Since 1955 annual production declined about 3,500,000 tons, consumption about 8,300,000 tons, and imports about 4,750,000 tons. Exports, on the other hand, increased about 700,000 tons in the decade but this bright spot was confined almost entirely to one segment of the industry, being attributable to higher exports of western bituminous coking coal, mainly to Japan. The weak competitive position of Canadian coals is caused by a number of factors, including high production costs because of low productivity in comparison with coal mines in the United States, and high costs of moving coal long distances, particularly bituminous coal from mines in Nova Scotia and New Brunswick to the industrial centres of Ontario and Quebec.

Mechanization of production, underground and surface coal preparation, particularly of slack and fine sizes, and efforts to control quality through coal sampling and analysis have all been increased to enable the industry to supply higher quality products at reduced costs. On the basis of costs per ton, significant improvement was noted in 1964 and increased productivity is expected to continue from the projects undertaken in recent years to improve methods of mining and conveying coal in underground mines.

Assistance to the coal industry was continued by the federal and provincial governments through research programs. The problem of fine coal production continued to receive attention with research directed toward improved methods of mining, beneficiation and combustion. Technical assistance has also been rendered in the field of quality control through sampling and analysis, and studies of the coking properties of coals in relation to their preparation for export markets and their use in prospective steel industries.

Financially, the Federal Government continued assistance to the coal industry through payments administered by the Dominion Coal Board with aid in the acquisition of new equipment and subventions on coal transportation. More than 34 p.c. of the production was moved with the aid of subvention payments; such assistance was applied to a total of 3,924,432 tons, 434,000 tons more than in 1963. The value of this assistance amounted to \$17,194,381 compared with \$17,543,915 in the previous year. Financial assistance amounting to \$2,700,000 was applied to the export of 845,590 tons of coal from Alberta and British Columbia. The Federal Government also made payments in 1964 totalling \$1,741,281 under the Atlantic Provinces Power Development Act, 1958, which indirectly aids the marketing of coal. Mines in Nova Scotia and New Brunswick shipping coal to markets in direct competition with imported residual oil received additional financial assistance. Loans for mine mechanization under the Coal Production Assistance Act amounted to \$180,000 in the year ended Mar. 31, 1964.

Production and Value.—Production of coal in Canada in 1964 increased 7.0 p.c. to 11,319,323 tons. The average value for all coal was \$6.43 per ton. On the employment side, the number of man-days dropped from 2,240,130 in 1963 to 2,227,516 in 1964. In Nova Scotia, the major coal-producing province and where the economy is most affected by declining coal markets, the decrease in coal-mine employment was 2.5 p.c. from 1,565,571 man-days in 1963 to 1,526,027 man-days in 1964. Employment in coal mines in New Brunswick increased 3.9 p.c. and in Alberta 10.2 p.c. but in Saskatchewan and British Columbia (including Yukon) decreased 2.3 p.c. and 4.6 p.c., respectively.

The major part (63.7 p.c.) of the coal produced in 1964 was bituminous, with an average value of \$8.78 a ton at the mine. Subbituminous accounted for 18.6 p.c. of production and lignite for 17.7 p.c. The average value of subbituminous coal was \$2.58

* Figures used in this Subsection are final figures and therefore differ moderately from the preliminary figures used in Tables 6 and 10, pp. 587 and 592, respectively.

a ton and the value of lignite \$1.96. In 1964, production of bituminous coal increased 2.4 p.c., subbituminous 27.2 p.c., and lignite 6.4 p.c.

The proportion of the output won by stripping methods was 42.9 p.c. The output per man-day of coal from Canada's strip mines was 18.57 tons, compared with 3.29 tons from underground mines. This represents an increase of 2.79 tons for strip mines and a slight decrease for underground mines. The over-all output per man-day increased from 4.728 to 5.082 tons.

Consumption, Imports and Exports.—The consumption of coal in Canada was approximately 25,000,000 tons in 1964, compared to about 22,610,000 in 1963. Of this total, about 60 p.c. was imported, and of the imported coal 93 p.c. was bituminous, used mainly in Ontario and Quebec; imports were 12.2 p.c. higher than in 1963. The production of coke used about 5,866,000 tons of coal, of which about 89 p.c. was imported. Sales of coal to the commercial and household heating markets amounted to about 2,596,000 tons. The use of coal by industrial consumers, including thermal-electric power plants, increased 11.8 p.c. to about 13,906,000 tons. There were 1,291,664 tons of Canadian coal exported in 1964, most of it from mines in Western Canada going to the United States and Japan for blending in the manufacture of metallurgical coke. The exports included about 3,800 tons sent to the Island of St. Pierre from Nova Scotia, and 278,336 tons from New Brunswick to the eastern United States.

The manufacture of briquettes decreased from 72,358 tons in 1963 to 59,913 tons in 1964.

Provincial Activities in the Industry.—Coal is produced in five provinces and a large share of the market for the industry is concentrated in Central Canada where there is no coal production. A small amount of coal is also mined in the Yukon Territory. A review of the provincial activities in the industry follows.

Nova Scotia.—Nova Scotia's coal production of 4,293,130 tons, which accounted for almost 38 p.c. of the total Canadian output, was almost 3 p.c. lower than in 1963. This province's coal is mainly high volatile bituminous coking coal mined in the Sydney, Cumberland and Pieter areas, although some non-coking bituminous coal is mined in the St. Rose, Inverness and Port Hood areas of Cape Breton Island. The over-all value at the mines was \$9.98 a ton and the output per man-day was about 2.8 tons.

All Nova Scotia's coal comes from underground mines, which are mostly mechanized. Coal-washing plants which prepare about 27 p.c. of the province's coal production are operated at two of the collieries. About 60 p.c. of the production is shipped to other provinces, mainly Central Canada to be used for industrial purposes; the remainder is used locally for steam-raising, power generation, household and commercial heating and the manufacture of metallurgical coke. In 1964, subvention payments were made on the movement of 2,336,571 tons.

New Brunswick.—New Brunswick's production, of which over 85 p.c. is strip-mined, is entirely high volatile bituminous coal mainly from the Minto area; a small amount comes from strip-mines in the Chipman and Coal Creek areas. The 1964 production of 1,003,362 tons, about 8.9 p.c. of Canada's output, represented an increase of 13.2 p.c. over 1963. Average output per man-day from strip-mines was 5.9 tons and from underground mines 1.7 tons. The coal had an average value at the mines of \$8.43 a ton.

Modern coal-washing plants operated at two of the strip-mining operations mechanically clean more than half of the province's output. A large part of the production is used locally for heating, power generation and processing; in 1964 about 7.5 p.c. was shipped to Central Canada and about 27 p.c. to the United States. Government subventions aided in the moving of 407,120 tons.

Saskatchewan.—Coal produced in Saskatchewan is entirely lignite, mined by stripping in the Bienfait and Estevan areas in the Souris Valley; this is the only active lignite coal-field in Canada. Production was 6.4 p.c. higher in 1964 than in the previous year,

amounting to 1,994,039 tons, which represented 17.6 p.c. of the Canadian production. The average output per man-day was 45.0 tons and the coal was valued at the mine at an average of \$1.96 a ton. This is the cheapest source of coal in Canada. The Estevan area serves the provincially owned Boundary Dam thermal-electric generating station which uses a large share of the total lignite production. Almost 31 p.c. of the 1961 output was shipped to Manitoba and 6.6 p.c. to Ontario for industrial, commercial and household use; the remainder was used within the province for similar purposes. Subvention assistance was given on 128,215 tons.

About 21,680 tons of briquettes were produced from carbonized lignite, a decrease of 38 p.c. from the 1963 output.

Alberta.—Several types of coal are available in Alberta, ranging from semi-anthracite mined in the Cascade area to subbituminous. Coking bituminous coals are present in the Inner Foothills Belt but, because of market conditions, they are at present mined mainly in the Cascade and Crowsnest areas and a large part of the production is exported to Japan for use in metallurgical industries. In several areas of the foothills, lower rank bituminous non-coking coals are available but production is confined to the Lethbridge and Coalspur areas. The other coal areas produce subbituminous coals which made up almost 71 p.c. of Alberta's output in 1964 and are used mainly for household and commercial heating and thermal power generation; increasing quantities are being used for the latter purpose. The four largest producing areas for subbituminous coals are Castor, Drumheller, Pembina and Sheerness and mines in these areas produced more than 88 p.c. of the Canadian subbituminous coal output which amounted to 2,104,912 tons in 1964, more than 27 p.c. higher than in the previous year. The output of bituminous coal increased more than 36 p.c. to 866,221 tons.

Total coal production in Alberta increased 29.7 p.c. to 2,971,133 tons, this being about 26.2 p.c. of the nation's coal output. Of the total, 61.3 p.c. was won by stripping, the average output per man-day being 28.2 tons compared with 4.9 tons for underground mines. The average value of bituminous coal was \$6.61 a ton at the mine, and that of subbituminous coal \$2.58 a ton. Of the provincial production, 1.1 p.c. was shipped to Ontario, 4.1 p.c. (mainly subbituminous) to Manitoba, 9.4 p.c. to Saskatchewan and 8.8 p.c. to British Columbia. Subvention assistance from the Federal Government was applied on the movement of 1,052,526 tons of Alberta and British Columbia coal.

The output of briquettes, which are made from the semi-anthracite and low volatile bituminous coals of the Cascade area and the medium volatile coals of the Crowsnest area, was about 38,000 tons.

British Columbia and Yukon Territory.—More than 93 p.c. of British Columbia's coal output came from the Crowsnest area (East Kootenay district) and most of the remainder came from Vancouver Island, with a small output from mines in the northern mainland. The coals range from high volatile to low volatile bituminous coking coals and over 91 p.c. comes from underground mines. Production in 1964 increased to about 1,050,000 tons, representing 9.3 p.c. of the country's output, and had an average value of \$6.02 a ton at the mine. The average output per man-day was 35 tons for strip-mines and 6.8 tons for underground mines.

Beneficiation facilities located at Union Bay (Vancouver Island) and Michel (East Kootenay) process nearly all of British Columbia's coal production. Of the total 1964 production, 13.4 p.c. was shipped to Manitoba, 2.1 p.c. to Ontario and small quantities to Alberta and Saskatchewan. About 396,000 tons of bituminous coking coal from the Crowsnest area were exported, some to the United States but most of it to Japan for blending in the manufacture of metallurgical coke.

In the Yukon Territory, about 7,000 tons of coal were mined from a single underground mine with an average output per man-day of 3.1 tons. This coal was valued at \$13.58 a ton and was all used locally.

Section 2.—Government Aid to the Mineral Industry

Subsection 1.—Federal Government Aid

Federal assistance to the mining industry takes the form of the provision of detailed geological, topographical, geodetic, geographical and marine data which are of basic importance to the discovery and development of the mineral resources of Canada; the provision, through metallurgical research, of technical information relating to the processing of ores, industrial minerals and fuels on a commercial scale; financial and technical assistance to the ailing coal industry; assistance to the gold mining industry under the Emergency Gold Mining Assistance Act, and certain tax incentives (see Chapter XXIII, Section 2 on Taxation in Canada).

The Department of Mines and Technical Surveys.*—The federal Department of Mines and Technical Surveys came into being in January 1950 in the reorganization of the former Department of Mines and Resources. The Department has six branches—Surveys and Mapping Branch, Geological Survey of Canada, Marine Sciences, Mines Branch, Observatories Branch, and Geographical Branch—and its functions include the administration of the Emergency Gold Mining Assistance Act, the Explosives Act and the Canada Lands Act.

The *Surveys and Mapping Branch* provides the base maps required for use in the development of Canada's natural resources, is responsible for legal surveys of federal lands and provides a national system of levelling and precision surveys for use as geodetic control by federal, provincial and private agencies. The functions and current operations of the Branch are covered in Chapter I, Section 3 on Federal Government Surveying and Mapping (pp. 17–19). The compilation and printing of maps and charts of all types for which data are secured by departmental surveying and research operations is conducted by the Map Compilation and Reproduction Division of this Branch.

The *Geological Survey of Canada Branch* aims, through systematic research in the geology of Canada, to provide knowledge basic to mineral inventories as well as to the development of mineral and other resources and to increase the fundamental knowledge of geological processes and events. In its field activities, it gives priority to the reconnaissance coverage of the country delimiting those areas of economic and scientific significance for subsequent detailed investigations, such as the unravelling of structures, stratigraphic successions and geological history in areas of highly deformed sedimentary rocks and the search for the fundamental causes of localization of orebodies.

Its laboratory activities vary from the provision of fundamental chemical and physical data on the rocks and other materials, collected by the field parties, to the development of new analytical techniques, the determination of new or unknown minerals, the investigation of physical properties of certain rocks and minerals and the design of electronic equipment for use in its geophysical and geochemical programs.

Probably one of the greatest contributions made to geology by the Geological Survey in recent years has been in age determination. In 1954 the Survey set up an age-determination laboratory and has produced more than 1,000 potassium-argon ages. The method was developed in the late 1940's for dating rocks formed during the five sixths (3,600,000,000 years) of the earth's history known as the Precambrian era. Previously, age determination was limited to the use of fossils, a method applicable only to sediments and rocks deposited since the start of the Cambrian Period nearly 600,000,000 years ago. The result has been a radically changed picture of the geological subdivisions of the Canadian Shield. The Survey is also dating geological phenomena in the other geological provinces and is incorporating the results on a tectonic map of Canada as Canada's contribution to a world tectonic map, scheduled for publication by the next International Geological Congress.

* Revised, under the direction of the Deputy Minister, in the Editorial and Information Division, Department of Mines and Technical Surveys, Ottawa.

As part of the Upper Mantle Project, a five-year international study of the earth's upper mantle, the Geological Survey is making a comprehensive petrological and mineralogical study of the Muskox ultrabasic intrusion in the Northwest Territories to obtain information on the origin, mode of emplacement and subsequent geological history of the intrusion, which rates as one of the world's finest examples of a differentiated ultrabasic body.

To assist industry in the location of buried orebodies, concealed by glacial deposits and soil and not readily found by standard prospecting means, the Survey has set under way biogeochemical studies to determine the influence on overlying vegetation of various metal elements in soil from the vicinity of a known major base-metal deposit in northern Ontario. It is testing the extent of absorption of certain ore elements by various types of trees.

The growing importance of groundwater supplies to the economy of Canada, particularly in the Prairie Provinces where supplies are limited, has led the Survey to increase its studies of the various factors that determine the availability and quality of groundwater. In the Prairie Provinces, it is studying several drainage basins to determine the nature of groundwater conditions and the water balance. In one such study, that of the relationship of groundwater and vegetation, for instance, it has found that losses in flow in major rivers can be accounted for in the use of water by vegetation along the banks.

Geophysics, which has become a major arm of geological research, is dealt with in Chapter VIII on Scientific and Industrial Research, pp. 404-405.

The *Marine Sciences Branch* was formed in 1962 to meet the need for oceanographic information on Canada's coastal and inland waters for defence and civilian purposes. Its program in Atlantic and sub-Arctic waters is carried out from the Bedford Institute of Oceanography at Dartmouth, N.S. A similar institute is to be built on the West Coast at Colwood near Victoria, B.C.

In the Arctic, the need for reconnaissance surveys in the navigable channels of the archipelago system (carried on for the past ten years through the use of ice-breakers) is giving way to more precise and detailed studies of the character and outflow of the waters in Baffin Bay and Davis Strait to gain a more thorough understanding of oceanographic influences in the North Atlantic. These studies will be expanded gradually to the level in which quantitative current measurements will be made on a routine basis in the Arctic, supported with predetermined oceanographic research projects. Atlantic studies cover the circulation and mixing of the waters of the North Atlantic Ocean, with special attention being given to the behaviour of the Gulf Stream beyond the Tail of the Grand Banks and the circulation and mixing of the Gulf Stream and the Labrador Current.

The Gulf of St. Lawrence is proving to be an ideal marine laboratory for the study of both estuarine and oceanic phenomena and for the testing and evaluation of instruments, methods and techniques. Institute oceanographers are studying the temperature-salinity characteristics in summer and winter and are setting up a large-scale observational program of oceanic factors, including current-meter recording.

Research in tidal prediction and in the forecasting of water-level changes caused by non-astronomic forces is carried on under Branch auspices in Ottawa.

In the study of energy exchanges across the air-sea interface, a long-term project, most of the effort to date has been on the development of instruments and measuring techniques. In 1964, oceanographers from the Bedford Institute and from the United States oceanographic centre at Woods Hole near Boston carried out a successful trial of their instruments on a stable platform in the Caribbean Sea just north of Aruba near Venezuela, and in 1965 BIO oceanographers measured wind stress, water currents and energy transports across the interface from a stable platform off North Point, P.E.I. The Canadian Oceanographic Data Centre, operated by the Branch at Ottawa, processes all data collected by the Canadian oceanographic community and is also responsible for international data exchange.

The *Mines Branch* carries out a continuing program of applied and basic research to discover new and better methods of mining, extraction and refining, and new uses for minerals. Its skills, technical knowledge and specialized equipment are at the service of the Canadian mineral industry, government agencies and research organizations. Today the Canadian mineral industry is faced with greatly increased competition in world markets, mainly because of technological advances and higher production in other countries. Added to this is the trend in Canada toward the recovery of complex ores and the consequent need of increased research to enable the maximum economic extraction of metals. This changing situation is reflected in Mines Branch activities which, while still including short-term research to solve immediate problems, are nevertheless being pointed more and more in the direction of long-term research in the interests of future technological advances. This trend is seen, for instance, in the work on flotation for the extraction of metal values, highly disseminated throughout the ore. The usual great variety of pilot runs on ores from all parts of the country are being carried out but, in addition, a series of studies based on modern concepts of this electro-chemical phenomenon is under way.

In hydrometallurgy, a thorough study is being made of bacterial leaching, an economic method of producing uranium, to determine the factors controlling bacterial action and seek maximum recovery by this method. Work on sulphide minerals, which form a large part of Canada's metal resources, further illustrates the trend toward basic research to improve knowledge to allow higher recoveries of metal values. Branch physicists, mineralogists, chemists and spectro-chemists have combined forces in a comprehensive study of the structure of these minerals.

Branch scientists have developed a process for recovering vanadium from fly ash produced in a Canadian oil refinery from the burning of residues resulting from the refining of Venezuelan crude oil. The product of this new process contains over 90 p.c. vanadium pentoxide and is suitable for the manufacture of ferro-vanadium, the form of vanadium for which there is the most market. No vanadium is produced in Canada.

In projects designed to find new uses for metals, interesting results have been obtained. It has been found, for instance, that the presence of as little as one ten-millionth of an inch thickness of gold on ultra high strength steel, prior to cadmium plating, eliminates potential static fatigue damage.

The Branch also works to improve products for marketing. For instance, a research program was undertaken in 1957 jointly with the zinc industry to obtain a more fundamental understanding of the galvanizing process. This has led to better control and an improved product which, in turn, means an improved domestic and export market for Canadian galvanized wares and Canadian zinc.

In fuels research, much attention is being devoted to the development of processes to beneficiate Canada's large resources of heavy crude oils and bitumens to supply the need when the better grade oils are less abundant. Branch scientists, for instance, have constructed and are testing a combined liquid-and-vapour-phase pilot plant, operating at pressures up to 10,000 psi. The plant will be used to process heavy crude oils to finished products and will serve as a cost indicator and as a training ground for mechanical and chemical engineers.

The research activities of the Branch have also been geared to meet the need for increased knowledge in ground and rock mechanics. Indeed, so important has research in this field become that the Branch has opened, at Elliot Lake in northern Ontario, a major centre of mining research to serve as a central source of information for the Canadian mineral industry.

The major activities of the *Observatories Branch* in its two main units—the Dominion Observatory at Ottawa, Ont., and the Dominion Astrophysical Observatory at Victoria, B.C.—are in the field of astronomical and related research, and these activities are covered in Chapter VIII, pp. 405–406. The geophysical work of the Dominion Observatory, which has a definite relation to the locating of mineral deposits, is covered in the same Chapter, pp. 404–405.

The *Geographical Branch* studies the natural landscape of Canada and man's impact on it. Its main research effort is in the fields of economic geography, geomorphology, glaciology, cartography and toponymy. Emphasis in economic geography is on regional studies and the computer analysis of the flow of commodities and people to provide basic data and recommendations for regional planning and policy making. Major emphasis in geomorphology has been on Baffin Island where Branch geographers carried out their fifth successive summer operation in 1965. The studies include a detailed evaluation of the history of deglaciation over the past 12,000 years and of the associated changes in the positions of land and sea.

The Branch is mapping Canada's 16 largest cities at the request of the federal Emergency Measures Organization; the maps are on a scale of 1:25,000 and are in colour. The mapping of Vancouver, Montreal, Toronto, Ottawa and Windsor has been completed.

The Branch substantially modified its land-use program in 1961 to meet the requirements of the Canadian land inventory section of the Agricultural Rehabilitation and Development Act (see p. 450). It is at present mapping land use of the settled areas of Ontario, Quebec and the Atlantic Provinces and co-ordinating the mapping of relevant sections of the western provinces, which is being undertaken on a contract basis. The end product will be a series of transparent cronaflex map sheets, on a scale of 1:50,000, to be used as computer input along with maps showing soils and climatic factors for evaluation of land capability on a regional scale.

The Branch has also studied high arctic landscapes, particularly on Melville and Boothia Peninsulas, Axel Heiberg, Cornwallis, Prince Patrick and Eilef Ringnes Islands, and has issued several publications on the special surface characteristics of this high arctic "periglacial" area. The Cypress Hills of Saskatchewan and Alberta is slated for intensive geomorphological studies over the next several years.

In glaciology, attention is focused on participation in the International Hydrological Decade. Branch geographers will investigate a series of small glaciers running east-west from the dry Rocky Mountain east slope to the wet west flank of the Coast Range of British Columbia to assess the glacial contribution to the water resources of this vital water-surplus area. They will prepare an inventory of Canadian glaciers, their past history and current condition, and continue the study of the Barnes ice cap on Baffin Island and the distribution of sea ice in the Queen Elizabeth Islands. The knowledge gained from the latter project is expected to lead to long-range ice forecasting in the area.

A desk atlas of Canadian geography, one of the Department's centennial projects, is in preparation.

In addition to the above Branches, the Department contains a *Mineral Resources Division* which provides a mineral information service that is freely used by government departments, mining and allied industries and others interested in mining or its significance in the Canadian economy. A mineral resources index inventory is maintained of all known occurrences and of mines, both active and potential. The Division makes economic studies of different phases of the mining industry. It administers the Emergency Gold Mining Assistance Act, prepares reports, on request, to aid in the administration of such matters as tax exemptions on new mining properties, and prepares reports and briefs on general legislation, taxation and tariff matters connected with the mineral industry. The Division is widely known for its publications, among the most valuable of which are the annual reviews of production, marketing and other matters concerning 61 minerals. It issues more detailed economic studies of metals and fuels of current interest and prepares annual lists of metallurgical works, metal and industrial mineral mines, milling plants, coal mines and petroleum refineries. Also published are special monographs on mining laws, taxation and subjects of particular interest to the mineral industry.

The Dominion Coal Board.*—The Board was established by the Dominion Coal Board Act (RSC 1952, c. 86) which was proclaimed on Oct. 21, 1947. By this Act the

* Revised under the direction of C. L. O'Brian, Chairman of the Dominion Coal Board, Ottawa.

Board was constituted a department of government to advise on all matters relating to the production, importation, distribution and use of coal in Canada. The Board is also charged with the responsibility of administering, in accordance with regulations of the Governor in Council, any coal subventions or subsidies voted by Parliament.

The Board is empowered to undertake research and investigations with respect to:—

- (1) the systems and methods of mining coal;
- (2) the problems and techniques of marketing and distributing coal;
- (3) the physical and chemical characteristics of coal produced in Canada with a view to developing new uses therefor;
- (4) the position of coal in relation to other forms of fuel or energy available for use in Canada;
- (5) the cost of production and distribution of coal and the accounting methods adopted or used by persons dealing in coal;
- (6) the co-ordination of the activities of government departments relating to coal; and
- (7) such other matters as the Minister may request or as the Board may deem necessary for carrying out any of the provisions or purposes of the Act.

In addition, the Dominion Coal Board Act provides authority in the event of a national fuel emergency to ensure that adequate supplies of fuel are made available to meet Canadian requirements.

The Act authorizes a Board membership of seven, including the chairman. The latter is the Chief Executive Officer, has the status of a Deputy Minister, spends full time on the Board's business, receives a salary and is in charge of a civil service staff. The other members, men of long experience and expert knowledge of aspects and regions of the Canadian coal industry, receive *per diem* payments and travelling expenses while attending Board meetings or while otherwise officially engaged on Board business.

In general, the Board and its staff constitute a central agency through which representations on coal matters are made to the Government from any sector of the industry or the public. Conducting a continuous study of developments and problems within the industry, exchanging information with provincial authorities concerned with coal and with national authorities and agencies in other countries and maintaining the most complete files of Canadian coal information in existence, the Board makes recommendations to the Government and reports to Parliament through the Minister of Mines and Technical Surveys. In view of the growing impact of oil and natural gas on the markets for Canadian coal, the Board and its staff have intensified the study of the relation of the competing sources of energy and of possible new outlets for the solid fuel.

Since its inception, the Board has worked toward the co-ordination of the activities, relating to coal, of various government departments, agencies and other bodies. Its own responsibilities in research on the mining and utilization of coal have been carried out mainly by delegation to the Fuels and Mining Practice Division, Mines Branch, Department of Mines and Technical Surveys. On occasion, the Board has recommended or commissioned specialized types of research by experts outside the government service—for example, the studies resulting in the Christie Reports which became influences leading to the enactment of the Atlantic Provinces Power Development Act (SC 1958, c. 25) and the establishment of a power grid in the Maritimes. As a contribution to the co-ordination of coal research and to the dissemination to the industry of technical information resulting from research, the Board initiated the now annual Dominion-Provincial Conferences on Coal. The Dominion Bureau of Statistics collects most of the statistical information required by the Board.

Government purchases of fuel, which constitute an important outlet for coal, claim a part of the time of the Board's staff in an advisory capacity. Advice on fuel matters is also continuously available to all government departments and agencies. A senior official of the Coal Board is chairman of the Interdepartmental Fuel Committee, which advises on the supply, purchase and utilization of fuel for the Department of National Defence, and of the Dominion Fuel Committee, which is organized along similar lines as an advisory body to other government departments.

The subvention assistance on the movement of Canadian coals, which the Board administers, is authorized from year to year by votes of money by Parliament; payments are in accordance with Regulations established by Order in Council. This assistance, which has been provided in varying degrees for the past 30 years, was designed to further the marketing of Canadian coals by equalizing as far as possible the laid-down costs of Canadian coals with imported coals. During the year ended Mar. 31, 1964, a total of 3,836,313 tons of coal was shipped under subvention and \$18,341,784 was paid in assistance; in 1964-65, the figures were 4,857,453 tons and \$21,602,195, respectively. Costs and conditions of the coal industry being subject to variations, the Board must review from time to time the rates of subvention and the areas where the assistance is required.

As agent to the Minister of Mines and Technical Surveys, the Board receives applications and administers loans under the Coal Production Assistance Act (RSC 1952, c. 173, as amended by SC 1958, c. 36; SC 1959, c. 39; SC 1960-61, c. 20; and SC 1962-63, c. 13). The Board also administers payments under the Canadian Coal Equity Act (RSC 1952, c. 34), which provides a subsidy on Canadian coal used in the manufacture of coke for metallurgical purposes. In the year ended Mar. 31, 1964, payments under this Act totalling \$236,108 were made on 476,986 tons of coal and in the following year payments totalling \$212,772 were made on 429,843 tons.

Emergency Gold Mining Assistance Act.—Under this Act, which came into force in 1948 (RSC 1952, c. 95), financial assistance is provided to marginal gold mines to counteract the effects of increasing costs of production and a fixed price for gold. By enabling gold mines to extend their productive life, the subventions help communities dependent on gold mining to adjust gradually to diminishing economic support.

Application of the Act was extended for four years to the end of 1967 on Dec. 12, 1963. The amending legislation provides a restriction on the payment of assistance to new lode gold mines commencing production after June 30, 1965. A lode gold mine brought into operation after that date will be eligible for assistance only if the mine provides direct support to an existing gold-mining community. A gold mine will be deemed to provide such support if the majority of the persons employed at the mine reside in one or more of a number of gold-mining communities which are specified in the Act.

The Act is administered by the Department of Mines and Technical Surveys with the aid of the Office of the Comptroller of the Treasury in accounting matters. Since the inception of the Act, the amount of assistance payable to the operators of a gold mine has been calculated by a formula consisting of two factors: the "rate of assistance" which is based on the cost per ounce of gold produced from the mine, and the "assistance ounces" which are a specified proportion of the total ounces of gold produced.

The amount of assistance payable to the operator of a gold mine is computed under the current formula by adding 25 p.c. to the product of the rate of assistance and the number of assistance ounces. The number of assistance ounces is two thirds of the total ounces produced and sold to the Royal Canadian Mint by a mine in a calendar year. The rate-of-assistance factor is two thirds of the amount by which the average cost of production per ounce of gold from the mine during a calendar year exceeds \$26.50. The maximum rate of assistance of \$12.33 per ounce is attained when the average cost of production per ounce of gold reaches \$45. The amount of assistance per ounce increases as the average cost of production per ounce increases from \$26.50 to \$45.

The cost of production of gold from a mine includes mining, milling, smelting, refining, transportation and administration costs. Allowances are made for depreciation, preproduction costs and expenditures on exploration and development on the mine property in accordance with the Regulations.

The amounts paid to operators of gold mines to Mar. 31, 1965 for the years 1948 to 1964, inclusive, totalled \$201,406,057 on a production of 49,007,675 oz.t. of gold produced and sold in accordance with the requirements of the Act. The assistance payable for gold produced and sold under the Act in the calendar year 1964 is estimated to be \$16,320,000.

Subsection 2.—Provincial Government Aid*

Newfoundland.—The Newfoundland Government, through its Mines Branch, provides several valuable services to those interested in prospecting and mining. It publishes, for sale at nominal cost, geological reports, geophysical maps and compilations of general data pertaining to specific areas and makes available, from unclassified files, various other information to interested parties. It identifies specimens sent in from Newfoundland and Labrador and assays by chemical means those that warrant such assessment. If good specimens from a known area warrant further investigation, a geologist from the Department of Mines, Agriculture and Resources is available to visit the locality and give advice. A complete set of minerals and rocks commonly found in Newfoundland, together with covering literature, is available at a nominal fee to any person on request. Prospector's or miner's permits are issued by the Department and claims are registered.

Nova Scotia.—Under the provisions of the Mines Act (RSNS 1954, c. 179), the Government of Nova Scotia may assist a mining company or operator in the sinking of shafts, slopes, deeps and winzes and the driving of adits, tunnels, crosscuts, raises and levels. This assistance may take the form of work performed under contract, the payment of bills for materials and labour, or the guarantee of bank loans. Any such work must be approved by the Department of Mines. Mining machinery and equipment to be used in searching for or testing and mining minerals may be made available through the Government. Such equipment is under the direct supervision of the Chief Mining Engineer.

The Government of Nova Scotia is also empowered to make any regulations considered necessary for increasing the output of coal. Such regulations cover the appropriation, on payment, of unworked coal lands, the operation of coal mines, and loans or guarantees for loans. Close co-operation is maintained with the Federal Government in carrying out federal regulations made to secure increased production and economical distribution of coal from the mines of the province.

New Brunswick.—The Mines Branch of the Department of Lands and Mines has five divisions. The *Mineral Lands Division* administers the disposition of Crown mineral rights including the issuing of prospecting licences, recording of mining claims, issuing of mining licences and leases and other matters pertaining thereto. Detailed and index claim maps are prepared for distribution. The *Mine Inspection and Engineering Division* administers the safety regulations governing operations under the Mining Act. All mines are regularly inspected, laboratory facilities are maintained and certain equipment used in mines must be approved by the Division. The *Geological Division* carries on general and detailed geological mapping and investigation. Maps and reports are prepared for distribution, mineral and rock specimens are examined for prospectors and preliminary examinations of mineral prospects are made when requested and circumstances warrant. The *Mine Assessment Division* is responsible for the collection of mining taxes and royalties and the preparation of statistics on mineral production. The *Bathurst Division* serves as recording office for northeastern New Brunswick. In addition, claim maps as well as topographical, geological and aero-magnetic maps are available for perusal and distribution. The staff is prepared to provide information concerning the Mining Act and the use of various types of maps.

Quebec.—The Department of Natural Resources administers general mining in the province, under authority of the Quebec Mines Act (RSQ 1941, c. 196).† The Department has two Branches—the Geological Services Branch and the Mining Services Branch—and, in addition, operates research laboratories and a pilot-plant.

The work of the *Geological Services Branch* is conducted through a Geological Exploration Division, a Mineral Deposits Division, a Mapping Division and a Water, Gas and Oil Division. It is responsible for the geological surveying of Quebec territory, with a view to

* Compiled from material supplied by the respective provincial governments.

† Replaced by a new Mines Act, effective Jan. 1, 1966.

promoting the development of the province's mineral resources. Yearly expeditions in the field provide information upon which detailed reports on various districts and geological maps are prepared for the use of interested persons. A unique mapping index is maintained through which prospectors may quickly obtain accurate information of value to their operations. The Water, Gas and Oil Division conducts hydro-geological surveys in quest of subterranean water and supervises drilling and boring operations undertaken by private companies in search of natural gas and oil.

The *Mining Services Branch* includes: General Mining Division, a Civil Engineering Division and a Mines Inspection Division. It issues prospecting and development permits, grants mining lands for working purposes, and collects fees for mining rights. It is responsible for the inspection of mines, quarries and processing plants to ensure that operations are consistent with regulations and to ensure the safety of mine workers. A trained rescue crew of about 375 members operates as three main groups and nine secondary groups. In addition, all workers in active underground mines are trained in rescue operations. The Department undertakes the construction and maintenance of mine roads as authorized under the Mines Act; it has constructed and paid the full cost of certain highways leading to new mining districts. In addition, to avoid the establishment of slums in the vicinity of mining enterprises, the Department regulates the use of the land and authorizes the building of well-organized residential areas.

Laboratories, operated for the use of prospectors, geologists, engineers and mine operators, include equipment for mineralogy, petrography, the dressing of ore, wet and dry assays, spectrography or X-ray photography. Mineral determinations are made free of charge but the assaying of ore content is subject to a fee; free coupons are issued by the Department to be used by prospectors for payment of assays. The laboratories have patented 12 new processes for the extraction and treatment of minerals and, because of the development of such new metallurgical processes, certain minerals once deemed valueless are now of great commercial importance.

To provide for the future development of the mining industry, scholarships are granted to students wishing to follow a career in geology, mining and metallurgical engineering, as well as to students in hydrology or other relevant fields of science (hydro-electricity, hydraulics or meteorology). The Department, in co-operation with universities in Quebec and Montreal, gives yearly courses in prospecting and lectures are given by departmental geologists and engineers at various points in the province.

Ontario.—The Ontario Department of Mines renders a multiplicity of services of direct assistance to the mining industry within the province. The *Mining Lands Branch* of the Department handles all matters dealing with the recording of mining claims, assessment work, etc., and the preparation of title to mining lands. As a service to the mining public, individual township maps are prepared and kept up to date showing lands open for staking and recorded and patented claims therein. District Mining Recorders maintain offices at strategic locations throughout the province. The *Geological Branch* carries on a continuing program of geological mapping and investigation and prepares, for the use of the public, detailed reports and maps of the areas studied. A program is under way, in co-operation with the Geological Survey of Canada, through which the whole province is to be flown and mapped in a series of airborne magnetometer surveys. In many active areas of the province, resident geologists gather and make available to the public information concerning geological conditions, exploration and development within their respective districts. A geologist specializing in industrial minerals investigates methods of treatment and recovery of such minerals and compiles data on the uses, specifications and markets for such products. During the winter months, courses of instruction for prospectors are held in various centres throughout the province.

The work done by the *Laboratory Branch* includes wet analyses and assays of metal and rock constituents on a custom fee basis, as well as mineralogical analyses and physical testing. The same service is given free of charge to holders of valid assay coupons issued for the performance of assessment work on mining claims. The *Temiskaming Testing*

Laboratories, situated at Cobalt, operate a bulk sampling plant mainly to assist the producers of the area in marketing their silver-cobalt ores; they also perform fire assays and chemical analyses. The *Inspection Branch* administers the operating rules of the Mining Act which call for the regular examination of all operating mines, quarries, sand and gravel pits and certain metallurgical works with a view to ensuring proper conditions of health and safety to the men employed. District offices to serve the local areas are maintained in the major mining centres of the province. Mine rescue stations in the principal mining sections are operated under the supervision of the Branch and all hoisting ropes in use at mines are periodically tested by a Branch-operated cable-testing laboratory.

Since 1951 the Department has been engaged in a road-building program to give access to mineralized areas and open them for full development. In 1955 this became an interdepartmental project with other interested departments participating through an interdepartmental committee of Ministers which decides on priorities and locations. Actual construction is carried out by the Department of Highways. The federal-provincial Roads-to-Resources program was inaugurated in Ontario in 1959; under the terms of agreement, the federal and provincial governments share equally in the cost of constructing roads to otherwise inaccessible areas (see also the Transportation Chapter, Part III, Section 2).

The *Public Relations Office* of the Department carries out a regular publicity and information program and maintains a library of films on mining subjects which are available for free loan to the public. Each year, displays pertaining to mining are prepared and presented at the Canadian National Exhibition and elsewhere in the province.

Manitoba.—The Mines Branch of the Manitoba Department of Mines and Natural Resources offers five main services of assistance to the mining industry: maintenance, by the Mining Recorder's offices at Winnipeg and The Pas, of all records essential to the granting and retention of titles to every mineral location in Manitoba; compilation, by the geological staff of the Branch, of historical and current information pertinent to mineral occurrences of interest and expansion of this information by a continuing program of geological mapping; enforcement of mine safety regulations and, by collaboration with industry, introduction of new practices such as those concerned with mine ventilation and the training of mine rescue crews which contribute to the health and welfare of mine workers; and maintenance of a chemical and assay laboratory to assist the prospector and the professional man in the classification of rocks and minerals and the evaluation of mineral occurrences.

Manitoba also aids the mining industry by assisting in the construction of access roads to mining districts.

Saskatchewan.—Assistance to the mining industry in Saskatchewan is administered by the Department of Mineral Resources. The *Mineral Lands Branch* of the Department is responsible for administering the Pre-Cambrian Assistance Program. This Program, designed to stimulate development and utilization of the mineralized areas of northern Saskatchewan, offers to industry a 50-p.c. rebate of approved exploration expenditures on a specified area or property to a maximum of \$50,000 a year for each individual or company and a maximum of \$150,000 on any one area or property. This Branch is also responsible for making disposition of all Crown minerals and maintains records respecting areas let out by lease, permit or claim. Recording offices, located at Regina, La Ronge, Uranium City and Flin Flon, assist the public in determining the lands available and accept applications.

Officers of the *Engineering Branch*, under the authority of the Mines Regulation Act, make regular examinations of all mines to ensure proper conditions for the health and safety of the men employed. Safety education, particularly in the form of first aid and mine rescue instruction, is also a part of the work of this Branch. All Branch officers are stationed at the Regina headquarters.

The Precambrian Geology Division of the *Geological Sciences Branch* conducts geological surveys in the shield areas of the province and publishes maps and reports for the information and guidance of the industry. Resident Geologists are maintained at Uranium City and La Ronge and at the latter centre a laboratory provides for the storage and examination of core and samples. The Division processes exploration data and assessment work to be made available for inspection by the industry.

Alberta.—Alberta Government assistance to the mining industry is diversified in character. The Mines Division of the Department of Mines and Minerals regulates coal mines and quarries and maintains standards of safety by inspection and certification of workers. The Workmen's Compensation Board also maintains safety standards and trains mine rescue crews. The oil and gas industries are served in a similar way by the Oil and Gas Conservation Board. Its regulatory measures, however, are also concerned with preventing the waste of oil and gas resources and with giving each owner of oil and gas rights the opportunity of obtaining a fair share of production. This Board compiles periodic reports and annual records which are of invaluable assistance in oil development in Alberta. The mining industry is also served by the Research Council of Alberta which has made geological surveys of most of the province and has carried forward projects concerned with the uses and development of minerals. The Council has studied the occurrence, uses and analyses of Alberta coals and their particular chemical and physical properties, the use of coals in the generation of power, and the upgrading and cleaning of coal, and has also studied briquetting, blending, abrasion loss, shatter and crushing strength, asphalt binders and dust-proofing of coal. Studies have been made of glass sands, salt, fertilizers, cement manufacture and brick and tile manufacture. (See also pp. 408-409.)

The province from time to time has had commissions examine various aspects of the mining industry when it has considered that their findings would be of assistance in developing such industries. The province, together with the Canadian Association of Oil Well Drilling Contractors and the Western Canada Petroleum Association, maintains a detailed supervisory and safety training program concerned with the drilling of oil and gas wells. Of assistance also to mining companies and oil companies are the special deductions provided for in the Alberta Income Tax Act. These follow the parallel provisions in the federal Income Tax Act.

British Columbia.—The Department of Mines and Petroleum Resources of British Columbia provides the following services: detailed geological mapping as a supplement to the work of the Geological Survey of Canada; free assaying and analytical work for prospectors registered with the Department; assistance to the prospector in the field by departmental engineers and geologists; grub-stakes, limited to a maximum of \$700, for prospectors; assistance in the construction of mining roads and trails; and inspection of mines to ensure safe operating conditions.

Section 3.—Mining Legislation

Federal Mining Laws and Regulations.—The Federal Government administers mining laws in the Yukon Territory, the Northwest Territories and certain other lands vested in the Crown in the right of Canada. The Yukon Quartz and Placer Mining Acts and the Canada Mining Regulations which are applicable to the Northwest Territories and other Crown lands are administered by the Resource Management Division, Resource Development Branch, Department of Northern Affairs and National Resources. Minerals underlying federal land under grants are reserved to the Crown, and mining rights may be acquired by staking mineral claims under the appropriate Acts or Regulations. Twenty-one-year leases of claims may be issued and these leases may be renewed. The disposal of mineral rights underlying Indian reserves is under the administration of the Department of Citizenship and Immigration and is subject to the consent of the Indians occupying the reserve and to the treaties relating thereto.

The Northwest Territories Quartz Mining Regulations were replaced by the Canada Mining Regulations, Mar. 3, 1961, amended in 1962 and 1963. The new Regulations provide for the exploration and development of minerals in the Northwest Territories and for the exploration and development of minerals underlying territorial waters of Canada and lying outside any of the provinces and the Yukon Territory. The revised Regulations require a prospector's licence to enter, locate and prospect on lands subject to the Regulations. However, a prospector's licence is not required to maintain claims that are in good standing.

Any individual over 18 years of age or any joint stock company incorporated or licensed to do business in Canada may hold a prospector's licence. Claim tenure is limited to ten years from the date of recording. At the end of ten years, the claim owner must apply for a lease or relinquish his rights. No lease will be granted to an individual unless the Minister of Northern Affairs and National Resources is satisfied that the applicant is a Canadian citizen and will be the beneficial owner of any interest acquired under such lease; no lease will be granted to a corporation unless the Minister is satisfied that at least 50 p.c. of the issued shares of the corporation are owned by Canadian citizens or that the shares of the corporation are listed on a recognized Canadian stock exchange and that Canadians will have the opportunity of participating in the financing and ownership of the corporation.

Any new mine beginning production after the Canada Mining Regulations came into force will not be required to pay royalties for a period of 36 months, starting from the day the mine comes into production. Production date is established as the date determined under the provisions of the Income Tax Act.

Oil and Gas Legislation.—The Federal Government administers oil and gas laws and regulations in the Yukon and Northwest Territories through the Resource Management Division, Resource Development Branch, Department of Northern Affairs and National Resources, Ottawa. All land in both territories is, in the first instance, owned by the Federal Government, complete with under-rights. These include oil and gas rights. When title to land is granted by letters patent, surface rights only are conveyed and under-rights continue to be vested in the Federal Government, which may dispose of them under appropriate legislation. Nine-year to 12-year permits to explore for oil and gas and 21-year oil and gas leases are available.

The Government has set up the Canada Oil and Gas Land Regulations and the Canada Oil and Gas Drilling and Production Regulations, both dated June 6, 1961 and amended in 1963 and 1964. They also include provisions for the exploration, development and production of oil and gas from land under all sea-coast waters of Canada which are not within any province.

An oil and gas exploration permit may be issued to any individual over 21 years of age or to any joint stock company incorporated or licensed to do business in Canada, or incorporated in any province of Canada. Permits are issued in periods of nine, 10 or 12 years, depending on the location, by which times the permittee is expected to apply for an oil and gas lease or relinquish his rights. No oil and gas lease will be issued to an individual unless the Minister of Northern Affairs and National Resources is satisfied that the applicant is a Canadian citizen and will be the beneficial owner of any interest acquired under such lease, or to a corporation unless the Minister is satisfied that at least 50 p.c. of the issued shares of the corporation are beneficially owned by persons who are Canadian citizens or that the shares of the corporation are listed on a recognized Canadian stock exchange, and that Canadians will have an opportunity of participating in the financing and ownership of the corporation.

Provincial Mining Laws and Regulations.*—All Crown mineral lands lying within the boundaries of the several provinces (with the exception of those within Indian reserves, National Parks and other lands which are under the jurisdiction of the Federal Government) are administered by the respective provincial governments.

The granting of land in any province except Ontario and Nova Scotia no longer carries with it mining rights upon or under such land. In Ontario mineral rights are expressly reserved if they are not to be included. In Nova Scotia no mineral rights belong to the owner of the land except those pertaining to gypsum, limestone and building materials, and the Governor in Council may declare deposits of either limestone or building materials to be minerals. Such declaration is to be based on economic value or to serve the public interest. In such case, the initial privilege of acquiring the declared minerals lies with the owner of the surface rights who must then conform with the requirements of the Mines Act. In Newfoundland, mineral and quarry rights are expressly reserved. Some early grants in British Columbia, Alberta, Saskatchewan, Manitoba, New Brunswick, Quebec and Newfoundland also included certain mineral rights. Otherwise, mining rights must be separately obtained by lease or grant from the provincial authority administering the mining laws and regulations. Mining activities may be classified as placer, general minerals (or veined minerals and bedded minerals), fuels (coal, petroleum and gas) and quarrying. Provincial mining regulations under these divisions are summarized in the following paragraphs.

Placer.—In most provinces in which placer deposits occur there are regulations defining the size of placer holdings, the terms under which they may be acquired and held, and the royalties to be paid.

General Minerals.—These minerals are sometimes described as quartz, lode, or minerals in place. With the exception of British Columbia, the most elaborate laws and regulations apply in this division. In all provinces except Alberta and Saskatchewan, a prospector's or miner's licence, valid for one year, must be obtained to search for mineral deposits, the licence being general in some areas but limited in others; a claim of promising ground of a specified size may then be staked. In Saskatchewan and Manitoba, a licence is required only for staking and in Saskatchewan any number of dispositions may be staked under one licence. A claim must be recorded within a time limit and payment of recording fees made, except in Quebec where no fees are required. Work to a specified value per annum must be performed upon the claim for a period of up to ten years except in Quebec where a development may be renewed on a yearly basis; also in Saskatchewan there is no work commitment in the first year of the claim. There is no time limit in British Columbia but \$500 assessment work, of which a survey may represent two fifths, must be performed and recorded before a lease may be obtained. In Quebec, a specified number of man-days of work must be performed and the excess may be carried forward for renewal of licence; before mining can be commenced, a mining concession must be purchased for which it is necessary to produce an engineer's report indicating the presence of an orebody. The taxation applied most frequently is a percentage of net profits of producing mines or royalties. In Saskatchewan, subsurface mineral regulations covering non-metallics stipulate the size and type of dispositions that may be made in order to maintain the disposition in good standing, provide for fees, rentals and royalties, and set out generally the rights and obligations of the disposition holder.

Fuels.—In provinces where coal occurs, the size of holdings is laid down together with the conditions of work and rental under which they may be held. In Quebec, exploration

* Compiled from material supplied by the provincial governments.

projects for fuel minerals may be carried out under exploration permit followed by a lease for areas larger than 1,280 acres. In Nova Scotia, mining rights to certain minerals, including petroleum, occurring under differing conditions may be held by different licensees. Provision is sometimes made for royalties. Acts or regulations govern methods of production. In the search for petroleum and natural gas, an exploration permit or reservation is usually required; however, in Manitoba, Saskatchewan, Alberta and British Columbia leases usually follow the exploration reservation whether or not any discovery of oil or gas is made. In Manitoba, Saskatchewan and Alberta, exploration costs are applicable in part on the first year's lease rental. In other provinces, the discovery of oil or gas is usually prerequisite to obtaining a lease or grant of a limited area, subject to carrying out drilling obligations and paying a rental, a fee, or a royalty on production.

Quarrying.—Regulations under this heading define the size of holdings and the terms of lease or grant. In Nova Scotia, sand deposits of a quality suitable for uses other than building purposes and limestone deposits of metallurgical grade belong to the Crown; gypsum quarries belong to the owner of the property. On Quebec private lands the quarry belongs to the owner; on Crown lands mineral rights belong to the Crown and may be obtained in accordance with the provisions of the law although the rights to exploit peat or marl must be obtained by special licence. In Saskatchewan, sand and gravel on the surface and all sand and gravel obtainable by stripping off the overburden or other surface operation belong to the owner of the surface of the land. In Alberta, sand, gravel, clay and marl recovered by excavating from the surface belong to the owner of the surface of the land.

Copies of mining legislation including regulations and other details may be obtained from the provincial authorities concerned.

Section 4.—Statistics of Mineral Production

Subsection 1.—Value and Volume of Mineral Production

Statistics of the annual value of mineral production are available from 1886, total production being shown for five-year intervals from that date to 1950 and annually for subsequent years in Table 4. These figures are not strictly comparable throughout the period because of minor changes in methods of computing metallic content of ores sold and valuations of products but they do serve to show broad trends in the mineral industry.

The mineral industry has tripled its value of output in the past 15 years. In 1949, the base year for many economic studies, the production per head of population was \$67.01; by 1964 this had advanced to \$176.61. Although part of the increase was accounted for by higher prices, the quantity index of output from Canadian mines recorded an advance from 100.0 to 326.5 in the same period (see p. 588).

4.—Value of Mineral Production, 1886-1964

1964 ^a	1,704,622,877	286,900,692	1,005,190,049	400,441,081	3,397,154,699

Current Production.—The estimated value of mineral products shipped in Canada during 1964 reached a new high at over \$3,397,000,000, which was 11 p.c. above the 1963 value. Canada's mineral output exceeded \$500,000,000 in value for the first time in 1940, passed the \$1,000,000,000-mark in 1950, exceeded \$2,000,000,000 in 1956 and exceeded \$3,000,000,000 in 1963.

Metals, ores and concentrates produced in 1964 were valued at \$1,705,000,000, an amount 13 p.c. higher than in 1963. Iron ore contributed \$403,000,000, nickel \$382,000,000 and copper \$328,000,000, together making up over 65 p.c. of the total metal output.

The quantity of iron ore produced was over 8,500,000 tons higher in 1964 than in the previous year, the mines in Quebec and Newfoundland contributing most of the increase. Nickel shipments were up by almost 16,000 tons and copper by 41,000 tons. New mines in Quebec and New Brunswick helped to raise the output of zinc to 682,000 tons from 474,000 tons in 1963 and to place Canada first in world zinc ore production. Among the metallics, decreases in value of production were shown only by uranium, gold, selenium and tin.

In 1964, non-metallic minerals increased 13 p.c. in value to reach almost \$287,000,000. The greatest contributor was the asbestos industry which shipped \$148,000,000 worth of crudes and milled fibres compared with \$137,000,000 worth in 1963. Although Quebec produced the major portion of the asbestos, substantial amounts were also mined in Newfoundland, Ontario and British Columbia. The value of potash shipments from Saskatchewan increased from \$22,500,000 in 1963 to \$30,660,000 in 1964. Salt in the form of rock salt, brine and fine vacuum salt was produced at a slightly higher level than in 1963 and more than 6,000,000 tons of gypsum were shipped to plaster plants in Canada and the United States. Producers of elemental sulphur from sour gas found export markets for this by-product and thereby reduced the huge stockpiles that had accumulated.

Over \$1,000,000,000 worth of mineral or fossil fuels were shipped in 1964 compared with \$908,000,000 worth in 1963. All fuels contributed to this increase although the major part of it was shown by crude petroleum which accounted for close to 20 p.c. of the total value of the Canadian mineral production in 1964.

Structural materials continued upward at a 6-p.c. rate. The value at the quarry or pit of stone, sand and gravel increased to nearly \$208,000,000 from \$203,000,000 and most of the cement plants operated at capacity, producing a total of 7,745,000 tons valued at \$133,000,000.

In terms of 1949 production equalling 100,* mineral production in 1964 reached an all-time high of 326.5, a gain of 10.9 p.c. from the previous high recorded in 1963. Major contributors to the gain were crude petroleum, zinc and iron ore.† Gains of lesser importance were recorded by natural gas, asbestos, copper and nickel. Declines occurred in lead, gold and 'other' metals (including uranium).

* For a description of this index, as well as one for manufacturing and electric power and gas utilities, see DBS Reference Paper *Revised Index of Industrial Production, 1935-1957 (1949=100)* (Catalogue No. 61-502). To update these series and others in the Index of Industrial Production, see DBS monthly report *Index of Industrial Production (1949=100)* (Catalogue No. 61-005).

† See also footnote 2, Table 8.

¹ Based on commodity data, years.² Includes potash for the first time and is not comparable with preceding

Subsection 2.—Provincial Distribution of Mineral Production

Developments in the mineral industries of the provinces during 1964 varied with the nature of the mineral deposits. In Newfoundland, the iron ore production, which included direct shipping ore, concentrates and pellets, increased 30 p.c. and new mines under development will increase shipments from this province by several million tons. More non-metallic minerals—barite, gypsum and salt—were shipped from the Nova Scotian mines. The metals produced by Quebec mines were worth \$100,000,000 more in 1964 than in the preceding year, contributed mainly by increases in zinc, iron ore and copper. Ontario produced larger quantities of nickel, copper and iron ore and supplied a greater demand for such structural materials as cement, stone, sand and gravel. Manitoba's copper-gold-silver mines increased their shipments of base metal concentrates. Oil and gas production continued upward in Saskatchewan and Alberta, with an additional boom building up in potash in Saskatchewan. Mineral output in British Columbia remained steady and there was only a slight increase in the Yukon Territory. High-grade lead and zinc ores were shipped over the new railway from Pine Point in the Northwest Territories.

9.—Value of Mineral Production, by Province, 1955-64

NOTE.—Figures from 1899 are given in the corresponding table of previous Year Books beginning with the 1933 edition.

¹ Includes mercury valued at \$22,192.² Includes graphite valued at \$5,570.³ Includes 629,475 tons of sand and gravel valued at \$573,345 produced in Prince Edward Island.⁴ See footnotes ² and ³.

Subsection 3.—Production of Metallic Minerals

The metallic minerals of greatest dollar value to Canada during 1964 were, in order: iron ore, nickel, copper, zinc, gold, uranium, lead and silver. Iron ore replaced nickel in first position and zinc advanced to fourth place from sixth. Developments taking place in metal mining during 1964 are described in detail in Section 1, pp. 550-560. The following statistical information gives a comparison of quantity and value figures for each of the principal metals over the ten-year period 1955-64.

Iron Ore.—Shipments of iron ore from Canadian mines, which have fluctuated considerably over the past ten years, reached a record high level in 1964. The quantity shipped by each producing province was higher than in 1963, the largest increases being contributed by Quebec and Newfoundland. Quebec accounted for 39.9 p.c. of the country's output, Newfoundland for 33.9 p.c., Ontario for 20.7 and British Columbia for the remainder.

Production of pig iron and production of steel ingots and castings were also at their highest levels in 1964. Exports of iron ore—direct shipping grade, concentrated, agglomerated and other forms—amounted to 34,130,545 tons valued at \$356,007,314, a considerable increase over the 1963 totals. Of the 1964 tonnage exported, 81 p.c. went to the United States and most of the remainder to Europe, mainly to Britain. Japan received 1,878,612 tons compared with 2,216,227 tons in 1963.

Nickel.—The output of nickel in Canada was slightly higher in 1964 than in 1963 because the older mines in Ontario, which are by far the largest producers, again stepped up output after the cutback of the preceding years. The other producing provinces—Quebec, Manitoba and British Columbia—recorded moderately lower quantities than in 1963.

Canada uses only about 6,000 tons of refined nickel (anodes, cathodes and ingots) annually. Exports amounted to 128,330 tons in 1964 compared with 109,156 tons in 1963, most of it going to the United States and Britain; exports of nickel in ores, concentrates and matte, mostly to Britain and Norway, amounted to 74,766 tons compared with 83,392 tons in the previous year.

Copper.—Production of copper in Canada reached its highest point in 1964 in both quantity and value, having risen in all producing provinces except Saskatchewan and British Columbia. Output in Ontario increased by 22,071 tons and in Quebec by 18,888 tons; these two provinces together produced over 73 p.c. of the Canadian total.

13.—Producers' Shipments of Copper, by Province, and Total Value 1955-64

NOTE.—Figures from 1886 are given in the corresponding table of previous Year Books beginning with the 1916-17 edition.

Zinc.—New mines in Eastern Canada, particularly in Quebec and New Brunswick, were mainly responsible for the large increase in shipments of zinc in 1964, an increase that made Canada the world's leading producer of this metal. Quebec is now Canada's largest producer, accounting for 33.5 p.c. of the total 1964 output compared with British Columbia's 30.4 p.c.

Gold.—Over the ten-year period 1955-64, Canada's annual gold production fluctuated narrowly around the 4,000,000-oz.t.-mark and its value around \$150,000,000. The high value reached in 1961 was followed by three successive annual declines, the quantity produced in 1964 being almost 15 p.c. lower than the 1961 total. Most of this decrease took place in the major producing provinces of Ontario and Quebec, although output in all producing areas was lower except the Atlantic Provinces and the Northwest Territories; the latter, which is the third highest producer, recorded a 2-p.c. increase in this comparison. In 1964, Ontario produced 56.0 p.c. of the Canadian output, Quebec 24.8 p.c., the Northwest Territories 10.9 p.c. and British Columbia 3.5 p.c.

Uranium.—Uranium mineralization has been found in Canada at intervals along the western and southern edges of the Canadian Shield but production has been concentrated in four areas within this belt—Great Bear Lake in the Northwest Territories, Beaverlodge in northern Saskatchewan, and Elliot Lake and Bancroft in Ontario. Although output of uranium first began in the Northwest Territories in 1942, figures were not available until 1954 because of government restrictions. However, it was after that time that the large mines and mills of Saskatchewan and Ontario came into production. Peak output amounting to 31,800,000 lb. was reached in 1959 from 23 mines, but by the end of 1964, for economic reasons (see p. 557), only five mines remained in operation and production dropped to about 13,800,000 lb. for the year. Of the 1964 quantity, 87 p.c. was produced in Ontario and the remainder in Saskatchewan.

¹ Figures for 1956 include radium salts, silver, cobalt and uranium oxides; figures for 1957-64 are for uranium oxide (U_3O_8).

Lead.—Production of lead in 1964 continued the downward trend of the preceding two years, although an increase in prices brought the value to its highest point since 1956. As stated on p. 554, new production in New Brunswick and the Northwest Territories was offset by a decline in British Columbia, the latter accounting for 66 p.c. of the output compared with 77 p.c. in 1963.

Silver.—Production of silver is fairly widespread across Canada, being recovered mainly as a by-product in the treatment of gold ores and ores of copper, lead, zinc, cobalt and nickel. Output is therefore often affected by changes in the production of these metals. The total amount produced in 1964 was somewhat higher than that for 1963 and the sustained high price of silver brought the value of that production to an all-time high.

18.—Producers' Shipments of Silver, by Province, and Total Value, 1955-64

¹ Includes relatively small quantities produced in Alberta.

Subsection 4.—Production of Non-metallic Minerals (excluding Fuels)

Asbestos is by far the most important item in this group in point of value, followed by potash, salt, sulphur and gypsum. Four of these items are discussed separately below; potash, a recently developed product produced only in Saskatchewan is covered on p. 561. Next in importance is peat moss which, although included as a non-metallic mineral, consists of the dead fibrous moss produced from peat bogs; its growing use as a soil conditioner, as poultry and stable litter and as packaging material resulted in shipments valued at over \$7,000,000 in 1964. Quantities and values of other non-metallic minerals produced are shown in Table 6, pp. 586-587, and a review of recent developments in the industrial mineral field is given at pp. 560-563.

Asbestos.—In 1964, Canadian asbestos mines shipped a record 1,377,000 tons valued at \$148,370,000, representing an increase of 8 p.c. in quantity and 11 p.c. in value over 1963. Quebec, with ten producing firms, accounted for over 90 p.c. of the total tonnage; British Columbia, Newfoundland and Ontario, each with one mine, contributed 66,000 tons, 50,000 tons and 15,500 tons, respectively.

19.—Quantity and Value of Producers' Shipments of Asbestos, 1955-64

Salt.—The output of salt continued its upward trend and reached a high point in both quantity and value in 1964 with Ontario and Nova Scotia contributing most of the increase over 1963. Ontario produced over 84 p.c. of the total tonnage. Rock salt is mined in Nova Scotia and Ontario; brine wells are operated in Nova Scotia, Ontario, Manitoba, Saskatchewan and Alberta. Salt is also a by-product of the potash operations in Saskatchewan.

20.—Producers' Shipments of Salt, by Province, and Total Value, 1955-64

NOTE.—Figures from 1926 are given in the corresponding table of previous Year Books beginning with the 1946 edition.

Sulphur.—The figures in Table 21 represent the quantity and value of sulphur contained in derivatives from smelter gases such as sulphur dioxide, sulphuric acid, etc., and in pyrite and pyrrhotite shipments, as well as the quantity and value of sulphur refined from natural gas production. The increase in the latter over the past six years has been quite remarkable. In Canada, sulphur is used in the treatment of sulphite pulps and in the manufacture of rayon, explosives, rubber goods, petroleum refining, matches and insecticides.

sulphide concentrates at Arvida and Port Maitland.
residue or sinter.

² Does not include sulphur in acid made

³ Includes sulphur in acid made from roasting zinc

⁴ Excludes pyrite and pyrrhotite used to produce iron

Gypsum.—Nova Scotia deposits provided 80 p.c. of the total output of gypsum in 1964 and, together with Newfoundland, accounted for the major part of the increased production in that year. The over-all increase in quantity was about 7 p.c. and in value about 10 p.c. In Canada, gypsum is used in the manufacture of plaster and wallboard and is added to portland cement to control setting, but most of the output is exported in crude form to United States plants for processing.

22.—Producers' Shipments of Gypsum, by Province, and Total Value, 1955-64

Subsection 5.—Production of Fuels

Coal.—The downward trend in the production of coal, in evidence for some time, was interrupted in 1960 and again in 1963 and 1964. In the latest year, New Brunswick, Alberta and British Columbia reported increases compared with the previous year but output in Nova Scotia and Saskatchewan, the major producing provinces, was lower.

23.—Coal Production, by Province, and Total Value, 1955-64

¹ Includes coal ex-warehoused for ships' stores.

² Coal or coke.

³ Includes anthracite dust.

⁴ Includes coal dust, ground coal and coal *n.o.p.*

The amounts and percentages of domestic and imported coal apparently consumed in Canada in the years 1955-64 are shown in Table 25. The imports represent amounts taken out of bond for consumption during the respective years, regardless of when received. Thus, the totals are exclusive of coal landed at Canadian ports and re-exported or ex-warehoused for ships' stores without being taken out of bond.

25.—Consumption of Canadian and Imported Coal in Canada, 1955-64

NOTE.—Figures from 1886 are given in the corresponding table of previous Year Books beginning with the 1921 edition.

Year	Canadian Coal ¹		Imported Coal 'Entered for Consumption' ²				Grand Total	Consumption per Capita

¹ The sum of Canadian coal mines' sales, colliery consumption, coal supplied to employees and coal used in making coke, etc., less the tonnage of coal exported. ² Imports of briquettes are not included in this table but are shown separately in Table 24. ³ Deductions have been made from this column to take account of foreign coal re-exported from Canada; bituminous coal ex-warehoused for ships' stores was deducted for the years prior to 1964.

Petroleum.—The upward climb of crude petroleum production which started with the discovery of the Leduc field in Alberta in 1947 halted temporarily in 1958 but resumed in 1959 and continued in subsequent years. Quantity production in 1964 reached a record level, about 16,000,000 bbl. higher than in 1963. Over 64 p.c. of the output was contributed by Alberta.

26.—Quantity and Value of Producers' Shipments of Crude Petroleum, by Province, 1955-64

Natural Gas.—The output of natural gas continues to increase at a rapid rate in Alberta and British Columbia. Total Canadian shipments, which amounted to 150,772,000 Mcf. in 1955, reached a high of 1,364,000,000 Mcf. in 1964; 1,184,000,000 Mcf. of that amount came from Alberta. A review of developments in the natural gas industry is given at pp. 564-565.

27.—Natural Gas Produced, by Province, and Total Value, 1955-64

NOTE.—Figures from 1920 are given in the corresponding table of previous Year Books beginning with the 1940 edition.

Subsection 6.—Production of Structural Materials

Active construction throughout Canada has kept production of structural materials at a high level in recent years. The value of such materials produced reached the record total of \$400,441,081 in 1964. In point of value, cement is the most important of the structural materials, followed by sand and gravel, stone, clay products and lime. Developments in the construction materials industries during 1964 are covered in the review at pp. 563-564.

Cement.—Shipments of cement in Canada reached an all-time high in 1964, output in that year being 10 p.c. above the previous peak of 1963. Consumption, continuing the almost steadily upward trend in evidence throughout the decade, also attained a record in 1964. Of the Canadian total of 7,745,000 tons shipped in that year, Ontario contributed 38 p.c. and Quebec 33 p.c.; all other provinces except Prince Edward Island and Nova Scotia contributed to the remainder.

28.—Producers' Shipments and Value, Imports, Exports and Apparent Consumption of Cement, 1955-64

NOTE.—Figures from 1910 are given in the corresponding table of previous Year Books beginning with the 1939 edition.

Year	Shipments (sold or used)		Imports ¹	Exports	Apparent Consumption ²
	tons	\$	tons	tons	tons

¹ Standard portland cement, other than white.

² Shipments plus imports less exports.

³ Includes imported clinker.

Sand and Gravel.—Deposits of sand and gravel are numerous throughout Eastern Canada, with the exception of Prince Edward Island where gravels are scarce. The local needs for these materials are usually supplied from the nearest deposits as their cost to the consumer is governed largely by the length of haul. This accounts for the large number of small pits and the small number of large plants in operation. Every province except New Brunswick and Prince Edward Island produces natural bonded sand but some grades particularly suitable for certain industries command much higher prices than ordinary sand. The greater part of the sand and gravel output is used in road improvement, concrete works or as railway ballast, and most of the commercial plants are equipped for producing crushed gravel, a product that can compete with crushed stone. Shipments in 1964 were approximately the same as 1963.

Stone.—The stone industry in Canada has two main divisions—stone quarrying and the stone products industry. The granite, limestone, marble, sandstone and slate quarries yield high-grade structural and decorative materials and also supply requirements for chemical and other allied industries but the major part of the tonnage produced is crushed stone.

¹ Excludes limestone used to make lime or cement.

Clay Products.—The sales value of clay products shipped in 1964 was slightly higher than in 1963. Common clays suitable for the production of building bricks and tile are found in all the provinces; production is greatest in Ontario and Quebec. Stoneware clays are produced largely from the Eastend and Willows areas in Saskatchewan and shipped to Medicine Hat, Alta., where, utilizing the cheap gas fuel, they are manufactured into stoneware, sewer pipe, pottery, tableware, etc. Stoneware clay also occurs in Nova Scotia and, although it has not been developed extensively for ceramic use, some is used for pottery. Two large plants and a few small plants manufacture fireclay refractories from domestic clay in British Columbia, Saskatchewan and Nova Scotia. Deposits of high-grade, plastic, white burning clays occur in northern Ontario and deposits yielding high-grade china clay have been found along the Fraser River in British Columbia but these have not been used on a commercial scale, nor have the ball clays of high bond strength occurring in the white mud beds of southern Saskatchewan been developed to any extent.

31.—Value (Total Sales) of Producers' Shipments of Clay Products, by Province, 1955-64

Section 5.—World Production of Certain Metallic Minerals and Fuels

Table 32 shows the production of certain metallic minerals and fuels in the different countries of the world for the year 1963. These figures are taken from the *United Nations Statistical Yearbook 1964* which presents production figures for a much more extensive list of mining and quarrying industries. The 1963 figures are provisional and have been converted from kilograms to ounces troy for gold, from metric tons to ounces troy for silver, and from metric tons to short tons for the other metals and fuels shown.

32.—World Production of Certain Metallic Minerals and Fuels, 1963

NOTE.—Where dashes occur throughout this table they indicate that no figures were given in the *United Nations Statistical Yearbook* either because there was no production or because the quantity was not available.

PART I.—FISHERIES

Section 1.—Commercial Fishing and Marketing, 1964*

Canadian fishermen reap large harvests from two mighty oceans—the Atlantic and the Pacific—and from the most extensive system of lakes and rivers in the world. The annual catch amounts to some 2,000,000,000 lb. of fish and shellfish, which has a total marketed value of about \$250,000,000. Only about one third of this output is used domestically and the remainder is shipped abroad in fresh, frozen, canned, salted, dried or otherwise preserved forms. Thus, Canada is one of the major suppliers of fish and fish products to world markets, being surpassed only by Japan and Norway in value of fish exports. There are more than 80,000 commercial fishermen in Canada and more than 13,000 persons employed in the fish processing industry.

Unquestionably the most important development in Canadian fisheries in 1964 was expansion in the Atlantic freezing industry, gathering speed after two years of careful planning at the capital investment level. In 1960, the Atlantic area was supplying about 60 p.c., by value, of the total Canadian fish output. Since then, the proportion has been creeping up, mainly owing to this growth in sales of frozen products.

The most significant factor on the Pacific Coast was the developing potential of the market for canned salmon. Because a small salmon run was predicted for the summer of 1964, canned salmon moved readily to market through the spring and most of it had been sold when the new fishing season started. It became apparent through the summer that the Japanese, the largest world suppliers, were getting a disappointing catch and that the cannery production schedules were lagging. The Alaska pack, also small, ensured that the United States would be a heavy buyer. However, Canadian runs proved to be of normal proportions; a good average pack of 1,200,000 cases went into British Columbia warehouses and prices climbed as buying became more and more competitive.

* Prepared by the Information and Consumer Service, Department of Fisheries, Ottawa.

The freshwater fisheries were beset by various kinds of bad luck through the spring and summer but pulled out of their decline during the fall. For the year as a whole, volume of catch, plant output and export shipments all declined, the latter by about 6,000,000 lb., but this was considerably offset by rising unit prices and an active late-year market so that the dollar volume was only slightly lower than that for the previous year.

Atlantic Fisheries.—During 1964, the Atlantic fishing industry established a new production record despite the difficulties of finding experienced crews for the expanded fleets and enough fish for the new production lines. The new electronically equipped vessels require crews with technical training and, at the output level, the fishermen's training schools did not quite keep up with demand, mainly because industrial activity in the area was generally good and the fisheries had to compete on a tight labour market. Partly because crew shortages sometimes delayed sailings, partly because of unusually bad weather, but mainly because some of the more-wanted fish species were rather scarce, the supply problem seemed less amenable to man-made solution than the crew problem. Redfish were hard to find and the halibut catch also declined. In 1963, 43 vessels cod-trap fishing off Labrador came back with 72,000 quintals of saltbulk; in 1964, 47 vessels brought in only 44,000 quintals. The resultant shortage, together with expanded buying of fresh cod by the freezing industry, prevented salters and dryers from taking full advantage of a good market. Norway and Spain were buying saltbulk; the West Indies and Portugal were placing large orders for heavy-salted cod; and Italy, Spain, Jamaica and Portugal were bidding competitively for the light-salted cure. Meantime, the major market for Canadian fish—the United States with its demand for frozen products—continued rapid expansion.

Maritime Provinces.—The year 1964 was the best on record for fishermen of the Maritime Provinces. They brought in 811,000,000 lb. of fish compared with the previous record of 696,000,000 lb. in 1960. They sold their 1964 fish for \$57,000,000, topping the all-time record of \$49,000,000 established in 1963.

These successes were not easily won. The year began with bad weather and a late spring. Harbours were still frozen over in April and arctic ice was still running steadily through the Gulf of St. Lawrence and out Cabot Strait in mid-May. Groundfish were plentiful offshore and the large new trawlers recently added to the fleets were able to cope with the weather but landings were practically limited to Petit de Grat, Halifax, Lunenburg and Beaver Harbour. On the boats the demand for experienced men exceeded the supply. On the docks the demand for fish exceeded the supply. In the warehouses orders for fresh, frozen and salted groundfish exceeded the supply. Orders for blocks and slabs of frozen cod fillets for the United States fish-stick industry continued upward. Salt-fish plants worked overtime to keep up with orders for hard-dried fish. Cuba was back in the market and other Caribbean countries were buying strongly. New York importers were asking for large shipments of boneless cod. By April most of the previous season's groundfish supplies had been processed, packed and shipped. Green salt cod was just beginning to come down from Newfoundland to Nova Scotia dryers as the weather loosened its grip on transportation. Few lobstermen could get their traps into the water when the lobster season opened and, as nearly all shore boats were immobilized by ice, those who did were short of fresh herring bait.

In these circumstances, fish prices rose to very tempting levels and as fast as clear ways opened through the ice floes operations jumped into high gear. The large new processing plant in Lunenburg opened in June and from then on, the major problem was to get enough fish.

Flounders were plentiful and very heavily fished throughout the season. Haddock were abundant through the summer but ran heavily to scrod during the autumn. A large proportion of the trap catch was pollock; freezing plants received more of this fish than they could use and sent the surplus to salters. Cod, redfish and halibut were scarce throughout the season but, as a result of intensive fishing, the groundfish catch increased by about 10 p.c. in quantity and between \$2,000,000 and \$3,000,000 in value. The over-all catch of

lobster was 2,000,000 lb. lower than in 1963 but buyer demands were heavy and prices rose steeply so that lobstermen's earnings were up by \$2,000,000. Packers found a particularly strong market for lobsters frozen live and put in nylon bags. The scallop industry continued its phenomenal expansion with shipments climbing another \$1,000,000 in value but toward autumn the volume showed signs of levelling off. Sword-fishermen increased their earnings by nearly \$1,000,000, although they brought in a somewhat smaller catch than in 1963; the halibut scarcity probably contributed to the demand for swordfish. Large herring were very plentiful but sardines were consistently scarce. The salmon catch increased slightly in both volume and value.

Newfoundland.—Newfoundland fishermen took a somewhat smaller catch than in 1963 but it earned them an unprecedented \$21,000,000. The inshore cod catch was smaller than average and redfish and haddock were scarce. Salmon and herring both yielded smaller and less valuable landings than in 1963. Offshore fishing was intensive but, although flounders and soles were abundant, over-all groundfish landings shrank in volume and did not improve upon the previous season in value. It was an increase in the lobster catch and the very high prices prevailing for this product that more than redressed the balance.

The freezing industry continued expanding its fleets and production lines, bought 43 p.c. of the cod catch and almost all of the flounders and other groundfish and attained a record output of 83,000,000 lb. of frozen groundfish products, 6 p.c. more than in 1963. Toward the end of the season, freezers were paying fishermen the highest cod prices ever recorded in the province. This limited the amount of cod remaining for the salters; their output at 440,000 quintals declined 17 p.c. from 1963. Prices offered for both light- and heavy-salted cod were at record levels.

Quebec.—The Gulf of St. Lawrence was blocked by ice until June and for this and other reasons Quebec suffered more than the other Atlantic Provinces and reached the end of the year with smaller groundfish, lobster and herring catches than in the previous season. However, the very high per-pound prices for lobsters and a good summer salmon fishery held the fishermen's collective income almost up to the record level of 1963. Their outlook was further brightened as plans matured for a large new plant at Paspébiac, to be built by the provincial government and operated by a Newfoundland fish company.

Pacific Fisheries.—Only twice before have British Columbia fishermen earned such a high collective income or the products of the plants reached such a high value as in 1964—once in 1958, the year of the famous sockeye bonanza, and again in 1962. The latter record only slightly surpassed the 1964 result.

The determining factor in 1964 was the size of the salmon runs. Salmon fishermen earned more than \$30,000,000, almost the same as in 1962 when the phenomenal run of pinks came to Bella Coola. Most surprising was the Skeena, where sockeye landings doubled the predicted figure and nearly equalled the all-time record. Sockeye also arrived in good quantities in Smith Inlet and the Fraser River, upon both of which the industry depends for a large proportion of its sockeye supplies. Two million pounds of pinks were taken in the Bella Coola area, where a scarcity had been predicted after two years of extreme abundance. Canneries packed all the chum salmon they could get through the summer because fall runs of this species were also expected to be small, but the fall runs were excellent and the chum pack was the largest in six years. The troll fleet, which catches chiefly cohoes and springs for the fresh fish market, accounted for two thirds of the coho catch of 29,000,000 lb. valued at \$9,250,000 (for the second successive year the most valuable of the salmon catches) and two thirds of the catch of springs, which brought \$5,500,000, making it the most valuable spring catch on record.

Halibuting opened in Bering Sea in March with 30 Canadian vessels getting only a poor catch. When fishing started off the British Columbia coast on May 1, warehouse supplies had dwindled and prices were above the low level at which they opened in the

previous year. Especially as United States landings also fell off, prices stayed up throughout the season, which ended Aug. 19 with the Canadian catch down 10 p.c. in volume from 1963 but up slightly in value to \$8,300,000, second only to the record \$10,900,000 in 1962.

A three-year international agreement, which put fish meal exports of the supplying countries on a quota basis, ran out in December 1963 and was re-negotiated for another three years with double the original allotment to Peru. The market had expanded rapidly during 1963. Canada's herring season that closed in March 1964 had a catch and meal output at near-record levels and the oil output reached a record 4,900,000 gal.; the unit price of oil had risen during 1963 from 5.50 cents to 9.25 cents. The new season began with active herring fishing during the summer, while the already strong market for both meal and oil became even firmer because of sharp fluctuations in Peru's landings of reduction fish. However, autumn operations were interrupted from Oct. 22 to Nov. 14 while the fishermen were out on strike but winter fishing yielded well and by the end of January 1965 the gap had been almost closed; the volume of oil production was ahead of the previous season and meal output was almost as high. For the calendar year 1964, the herring catch totalled 253,000 tons, close to the record.

Inland Fisheries.—Throughout the spring, the export market for freshwater fish was slow and fishing effort and catch were light. The summer was hot, catches remained small, ice was often scarce and quality hard to maintain and the fishermen could earn more fighting forest fires. By September firms were falling behind on their orders, especially on block fillets for the United States gefilte fish industry. Most disturbing of all was a growing conviction among fishery biologists that pollution in Lake Erie, which yields the largest catches, had quite possibly passed the point of no return. The catch of yellow perch was less than half that of 1963.

Elsewhere, however, all trends were upward from September to the end of the year. The open-water fishery on Lake Winnipeg ended with a 30-p.c. increase in the whitefish catch and fair results with sauger. Improved supplies of lake trout from Wollaston and Reindeer Lakes were sold as fast as they could be shipped. Lakes Superior and Nipigon had good fall runs of whitefish, and herring fishing on Superior yielded well.

By October, heavy supplies were moving steadily into cold storage and from early November to the holiday season the out-of-storage movement was even stronger. Mail-order trade in pan-ready products became active; food chains placed large orders for tray-pack items; several new cooked products were so well received that a number of plants expanded their cooking facilities. Much of the filleted fish went into blocks and five-pound packages but there was also a strongly expanded market for whole dressed fish.

Section 2.—Governments and the Fisheries

The British North America Act gave the Federal Government full legislative jurisdiction for the coastal and the inland fisheries of Canada and under this Act laws are made for the protection, conservation and development of the fisheries throughout the country. However, the provinces have, by agreement, assumed administrative responsibilities in varying degrees. Consequently, although all the regulations governing fishing are made by the Federal Government, the work of administering the fisheries (enforcing the different laws and regulations, inspecting fish products, issuing licences, etc.) is done without duplication of staff by either federal or provincial officers, according to arrangement.

Specifically, all tidal or sea fisheries except those of the Province of Quebec are administered by the federal Department of Fisheries, and the freshwater or non-tidal fisheries, with some exceptions, are administered by the provincial departments. Quebec takes responsibility for all its fisheries including those in salt waters. Ontario, Manitoba, Saskatchewan and Alberta administer their freshwater species. In British Columbia, provincial government control extends to the freshwater forms and the Federal Government is responsible for marine and anadromous species. In Prince Edward Island, Nova

Scotia, New Brunswick, Newfoundland and the Yukon and Northwest Territories, the Federal Government maintains complete control; administration of the fisheries of the National Park areas throughout Canada is the responsibility of the Canadian Wildlife Service, Department of Northern Affairs and National Resources.

Federal-Provincial Relations.—To meet special fishery problems where the interests of both federal and provincial governments are concerned, four Federal-Provincial Fisheries Committees have been established. Two were in existence prior to 1964—the Federal-Provincial Atlantic Fisheries Committee, consisting of representatives of the Federal Government and the Governments of Quebec, New Brunswick, Nova Scotia, Prince Edward Island and Newfoundland, and the Federal-Provincial Committee for Ontario Fisheries. Two others were established during 1964 as a result of the Federal-Provincial Conference on Fisheries Development held in Ottawa in January—the Federal-Provincial Prairie Fisheries Committee and the Federal-Provincial British Columbia Fisheries Committee.

Members of the Committees are the Deputy Minister of Fisheries of Canada, the Deputy Ministers of provincial departments responsible for fisheries and, where only one province is involved, members of federal and provincial agencies, who are included to bring the committees up to strength.

Sub-committees make recommendations for industrial development, research and marketing problems. The main committee in each case co-ordinates, where practicable, all activities in the respective fields of responsibility of its members, and suggests to the respective governments means of carrying out fisheries programs and projects of common concern. These include the development of methods and techniques in the catching of fish and of shore and plant facilities, and studies of the economics of fisheries to ensure that any proposed program of development is soundly based.

Subsection 1.—The Federal Government

The work of the Federal Government in the conservation, development and general regulation of the nation's coastal and freshwater fisheries is performed by three agencies under the Minister of Fisheries:—

- (1) The Department of Fisheries proper with headquarters at Ottawa, Ont., and area offices under Area Directors at Vancouver, B.C., Winnipeg, Man., Quebec, Que., Halifax, N.S., and St. John's, Nfld.
- (2) The Fisheries Research Board of Canada with headquarters at Ottawa and eight stations across Canada.
- (3) The Fisheries Prices Support Board with headquarters at Ottawa.

A brief outline of the functions of each of these agencies is given in this Subsection.

The Department of Fisheries.—The chief responsibilities of the Department of Fisheries throughout Canada are, in brief: to conserve and develop Canada's primary fishery resources; to encourage the development of the fishing industry in the national economy; to inspect fish products, establish standards of quality and promote the optimum utilization of the resource; and to develop a proper public understanding of the resource and the industry. The larger part of the staff of the Department is stationed in the field and is composed mainly of protection and inspection officers. The protection officers, including those on the Department's 80 patrol and protection vessels, are concerned with the enforcement of the conservation regulations under the Fisheries Act and other Acts designed to ensure a continuing maximum yield of fish, and are also responsible for the inspection of fish products and processing plants under the Fish Inspection Act and relevant section of the Meat and Canned Foods Act.

A conservation program is carried out by the Conservation and Development Service of the Department. Protection officers enforce regulations pertaining to restricted areas, close seasons, limitations in location and types of gear, and also inspect spawning streams

and keep them clear of obstructions. Biologists and engineers work together to provide solutions to such problems as pollution, multi-use of water resources, floods, droughts, obstacles to fish passage, etc. Advanced techniques of improving the spawning and rearing environment of the salmon have thus been developed. Among these, man-made spawning channels have attracted world-wide attention and interest. At some locations in Canada, fish hatcheries are maintained to rehabilitate stocks.

Inspection of fish and fish products to ensure a high standard of quality is carried out by the Inspection Service with field officers at major fish processing points across Canada. Fish Inspection Laboratories are maintained on the Atlantic and Pacific Coasts and in Toronto and Winnipeg.

Through the media of printed material, films, radio, television and exhibitions, the Information and Consumer Service informs the public on the various aspects of the industry and the work of the fisheries services. This Service works closely with the Conservation and Development Service in matters concerning the conservation of fisheries and with the Inspection Service toward encouraging increased consumption of Canadian fish products in the domestic, United States and other markets. A staff of home economists operates test kitchens in Ottawa, Toronto, Vancouver, Montreal, Halifax, Edmonton and Winnipeg, and conducts demonstrations and lectures on methods of preparing and cooking fish and fish products.

The Economics Service has two related fields of responsibility: (1) to provide the government and the commercial fishing industry with current information, including statistical data, under the general heading of trade intelligence, and (2) to carry out studies and investigations in the primary fisheries and in the processing and distribution of fish products.

In addition to these regular services, the Department assists the commercial fishing industry in several special ways. To promote efficient primary fishing operations and improve the marketing of fishery products, assistance is provided for the construction of draggers and longliners and for bait-freezing and storage facilities on the Atlantic Coast. The Fishermen's Indemnity Plan affords low-cost protection from losses of boats and lobster traps through storms and other causes. The Plan has been in operation since 1953 and at Dec. 31, 1964, a total of 7,006 vessels with an appraised value of \$25,705,000 were insured under it. The Department also provides financial assistance to educational institutions agreeing to carry out specialized educational work among fishermen.

International Fisheries Conservation.—Conservation of the resources of the high seas can be effected only through regulation, and for this purpose international treaties have had to be made. Canada's obligations under such treaties with the United States and other countries are administered by the Department of Fisheries.

Canada and the United States have led the world in joint fisheries conservation development. Major examples of this joint effort are the International Pacific Halibut Convention, concerned with the preservation of the halibut stocks of the north Pacific and the Bering Sea, and the International Pacific Salmon Fisheries Convention, concerned with the conservation and development of the sockeye and pink salmon of the Fraser River. Investigations carried out under the auspices of commissions appointed under these conventions, subsequent regulation and limitation of catches, and the construction of salmon fishways appear to have been successful in arresting and reversing an earlier trend toward depletion of these fisheries. Another example of restoring a depleted marine resource by international agreement and action is that of the fur seals of the Pribilof Islands in the Bering Sea. Under a treaty signed in 1911, known as the (North Pacific) Sealing Convention, pelagic sealing was prohibited while the animals were migrating to and from the Pribilofs where most of them breed. This treaty had been signed by the United States, Canada, Russia and Japan, and was one of the earliest conventions on resources of the sea. In 1941 Japan abrogated the treaty and the following year Canada and the United States signed a Provisional Fur Seal Agreement under which Canada, in return for abstaining from pelagic sealing, received 20 p.c. of the annual catch, which was supervised by the

United States. A conference to re-negotiate the original convention was begun in Washington in November 1955 and a new settlement was signed by the original four countries on Feb. 9, 1957.

In 1949 the Government of Canada became a signatory, along with nine other countries, to the International Northwest Atlantic Fisheries Convention which came into force in 1950. The Commission established under this Convention, with headquarters at Halifax, N.S., makes scientific investigations of the fishery resources of the northwest Atlantic. The Commission has no regulatory powers but can make recommendations to the respective governments regarding measures that may be necessary for maintaining the stocks of fish that support the international fisheries in the Convention area. Treaty signatories now are: Canada, Denmark, Iceland, the United States, Britain, France, Italy, Norway, Poland, Portugal, Spain, the Federal Republic of Germany and the Union of Soviet Socialist Republics.

A step toward international action in regulating the high seas fisheries of the northern Pacific Ocean was achieved in December 1951 when Canada, the United States and Japan conferred at Tokyo. The resulting Convention was ratified by the three contracting governments and instruments of ratification were deposited at Tokyo in June 1953. The treaty is known as the International Convention for the High Seas Fisheries of the North Pacific Ocean and aims at providing the maximum sustained yield of the fishery resources of the northern Pacific non-territorial waters with each of the parties assuming obligations to encourage conservation measures. The Commission established under this Convention is studying the northern Pacific fisheries and will determine the application of the treaty principles and promote and co-ordinate the necessary scientific studies.

The seventh, and latest, international fisheries agreement to which Canada is a signatory is the Great Lakes Fisheries Convention, which provides for joint action by Canada and the United States in Great Lakes fishery research and in a program for the control of the predator lamprey in these waters. This Convention came into force in October 1955.

Canada is a member of the International Whaling Commission and is obligated to collect biological data on whales caught by Canadian vessels. Whaling operations are conducted in some years off the Atlantic and Pacific Coasts.

The Fisheries Research Board of Canada.—The Fisheries Research Board is a research organization established by Act of Parliament (RSC 1952, c. 121) for the purpose of conducting basic and applied research on Canada's living aquatic resources, their environment and their utilization. Its antecedents go back to 1898 and it is thus the lineal descendant of one of the oldest scientific organizations in Canada and one of the oldest government-supported research organizations under the supervision of an independent scientific board in North America.

By its Act, the Board is placed under the control of the Minister of Fisheries. The Board proper consists of a permanent chairman, who is appointed by the Governor in Council and who is a member of the Public Service of Canada, and "not more than eighteen other members" holding honorary appointments from the Minister of Fisheries for five-year terms; the Act requires that "a majority of the members of the Board, not including the chairman, shall be scientists, and the remaining members of the Board shall be representative of the Department [of Fisheries] and the fishing industry". The scientific members are drawn principally from universities and research foundations across Canada, to include specialists in disciplines related to the Board's work. The industry members are selected from among Canada's leading business men with an intimate knowledge of fishing and the fishing industry and the Department of Fisheries representative is usually a senior staff member in Ottawa. Board members have both advisory and executive functions. The advisory functions are delegated in the first instance to regional Advisory Committees who conduct on-the-spot regional reviews and report to the Board on the operations and scientific programs with a view to their improvement. The executive functions are delegated to an Executive Committee elected from Board members and approved by the Minister.

The operations of the Board are highly decentralized, there being only a small administrative, supervisory and publications staff in Ottawa. The Board employs approximately 800 persons, of whom about 200 are scientists.

Biology.—The biological program of the Board is designed to add to fundamental knowledge concerning Canada's vast living marine and freshwater resources. Included here are life history, population and behaviour studies leading to a sound scientific basis for the conservation and management of the commercially important fisheries including those for lobsters, crabs, shrimps, oysters, scallops, clams, marine mammals and other well known economically important aquatic species of animals, such as salmon, cod, herring and halibut, as well as some marine plants, such as phytoplankton and seaweeds. Also included are studies in fish and shellfish diseases, fish enemies including the ill effects of water pollution, and such basic studies as fish genetics, physiology and behaviour, the latter with a view to improving fish cultural and farming methods and also to improving fish farm and hatchery stocks. Besides these basic studies, new fishing grounds and new species for exploitation are sought and experiments in improving fishing methods are undertaken.

The biological work on the Atlantic Coast is conducted out of research stations located at St. Andrews, N.B., and St. John's, Nfld.; work on arctic fisheries and on sea mammals is directed from a laboratory situated in Ste. Anne de Bellevue, Que.; freshwater work is carried out from a station in London, Ont.; and work on the Pacific Coast is directed from research laboratories situated at Nanaimo, B.C. The Board operates 18 research vessels for its biological studies, varying from small inshore and lake craft to specially built seagoing ships. The Board acts as Canada's research agent for three international fisheries commissions and two international sea-mammal commissions to which Canada is party.

Oceanography.—Oceanography includes the study of the marine (and freshwater) environment in which aquatic organisms live. This is under continuing study to further knowledge in primary and secondary productivity and the occurrence of ocean and freshwater life of importance to man. Encompassed here also are investigations into the distribution and physical and chemical characteristics of major ocean currents and the physical and biological structure of large ocean areas including the ocean bottom where concentrations of fish and other aquatic life occur. Ocean climate and ocean weather as they affect the distribution of fish and other living organisms as well as the vertical and horizontal distribution of nutrient matter and the cycle of energy and life in the seas are regularly observed and correlated. These studies, as well as special studies of interest to the Royal Canadian Navy, the Department of Transport and the international fishery commissions, are carried out by the Board's two oceanographic groups operating from Dartmouth, N.S., and Nanaimo, B.C., with strong ship support from the Navy and the Department of Transport, and co-operation from the Department of Mines and Technical Surveys.

Technology.—Investigations are conducted toward improving methods of preserving, processing, storing and distributing fish products, as well as of utilizing all parts of the fish. These include developments in refrigeration and the use of antibiotics as fish preservatives, of improved refrigerated rail cars for fish distribution, improvements in canning, smoking and salting of fish as well as the development of new products such as protein concentrates (fish flour) and new uses such as the development of wieners for the utilization of abundant species that are not now used for food. Fundamental studies of the structure and composition of fish proteins, fish oils, fish hormones, the energy expenditure of migrating salmon and the nutrition of marine bacteria are under way.

Technological investigations on the Atlantic Coast are carried out at research laboratories situated at Halifax, N.S., and Grande Rivière, Que., and applied work for Newfoundland is carried out at a Technological Unit at St. John's. For inland areas there is a Technological Unit in London, Ont., and a Technological Research Laboratory in Vancouver, B.C., undertakes investigation of Pacific Coast problems.

The Fisheries Prices Support Board.—Under the Fisheries Prices Support Act passed in 1944, this Board was set up in July 1947 to recommend to the Government price-support measures when severe price declines occur. The Board functions under the direction of the Minister of Fisheries and consists of a chairman, who is a senior officer of the Department of Fisheries, and five members chosen from private and co-operative firms in the industry, representative of the various fish-producing regions of Canada.

The Board has authority to buy quality fishery products under prescribed conditions and to dispose of them by sale or otherwise, or to pay to producers the difference between a price prescribed by the Board and the average price the product actually commands. The Board has no power to control prices nor has it any jurisdiction over operations in the fishing industry or the fish trade. Money necessary for dealings in fishery products is available to the Board from the Consolidated Revenue Fund to a maximum amount of \$25,000,000 but only on recommendation of the federal Treasury Board and authorization of the Governor in Council.

The Board maintains a small staff for administrative activities. The work is closely integrated with that of the Department's Economics Service and, where possible, services required by the Board are carried out by Department personnel. The Board has carried out field surveys on market conditions and possibilities and on factors affecting the income of fishermen in the various producing areas. The financial position of fishermen is kept under continuous review and recommendations are made to the Government on the basis of the findings. Special investigations are made when serious problems arise in particular areas.

Subsection 2.—The Provincial Governments*

An outline of the work undertaken by each of the provincial governments in connection with administration of commercial and game fisheries is given in the following paragraphs.

Newfoundland.—The provincial Department of Fisheries in conjunction with the Newfoundland Fisheries Development Authority, a Crown corporation established in 1953, is concerned mainly with the improvement and development of fishing and production methods. It conducts experiments and demonstrations in longlining, Danish seining and otter trawling, in the construction of multi-purpose fishing craft, and in the exploration of potential fishing grounds.

Loans are made to processors for the establishment and expansion of fish processing plants and for deepsea draggers and also to fishermen for the construction and purchase of modern vessels capable of a greater variety of fishing operations and larger production. Fishermen receive further aid through bounty payments at the rate of \$160 a ton for newly constructed vessels under the Fishing Ships (Bounties) Act, 1955. The Fishing and Coasting Vessels Rebuilding and Repairs (Bounties) Act, 1958 authorizes the government to assist financially in maintaining and prolonging the life of the existing fleet. The Coasting Vessels (Bounties) Act, 1959 authorizes the granting, for locally built ships, of a maximum bounty of \$300 a ton for vessels measuring from 15 to less than 100 gross tons, and \$150 a ton for vessels of between 100 and 400 gross tons. An Inshore Fisheries Assistance Programme provides a maximum bounty of \$10 a foot on boats measuring from 24 to 35 feet and bounties are paid to fishermen on certain types of nylon and other synthetic fibre fishing nets and lines.

Other services include advisory services to fishermen on gear and equipment, industrial research, plant construction, plant engineering and economics; assistance to fishermen's unions; weather and ice reports; and search and rescue. The Fisheries Salt Act, 1957 implements more rigid control over the use of fisheries salt.

Sport Fisheries.—The inland waters of Newfoundland, although they provide excellent sport fishing, are not commercially exploited. The lakes and ponds actually remain under

*Prepared by the respective provincial departments responsible for fisheries administration.

the authority of the Natural Resources Branch of the provincial Department of Mines, Agriculture and Resources but, under federal-provincial agreement, these waters, including rivers and streams, are under federal control in matters of conservation and guardianship.

Prince Edward Island.—The sea and inland fisheries of Prince Edward Island are administered by the Federal Government. The provincial Department of Fisheries supplements federal activity and is concerned mainly with development of the fisheries industry. The Department provides technical assistance and, in conjunction with the Fisheries Research Board of Canada and branches of the federal Department of Fisheries, engages in some experimental work.

Financial assistance is made available to fishermen through the Fishermen's Loan Board of Prince Edward Island, a body corporate operating under the provincial Department. The Fishermen's Loan Board operates under authority given by the Re-establishment Assistance Act and regulations thereunder, approved by the Lieutenant-Governor in Council, Jan. 7, 1949, with amendments. Loans are made to fishermen and companies for the purchase of boats, engines and other deck machinery at an interest rate of 4 p.c. From its reorganization in 1949 until the end of March, 1964, the Board has lent \$3,073,692 for the modernization of the inshore and offshore fleets. Loans for the construction or expansion of processing plants are available through the Industrial Establishments Promotion Act under which loans may be made for facilities handling agricultural, horticultural or fishery products.

Sport Fisheries.—Game fisheries are the responsibility of the Department of Fisheries. The streams of the province, mostly spring-fed and fairly constant in flow, provide very favourable conditions for the reproduction of game fish, of which speckled trout is the most important variety. Investigations concerning the production of trout of a size attractive to anglers are being conducted by the Fisheries Research Board of Canada at sites provided by the provincial Department. Unfortunately, many of the formerly fertile and highly productive ponds of the province have disappeared, and the provincial Department is actively concerned with damming and restoring these for the enjoyment of the public.

Nova Scotia.—Although the Federal Government has exclusive jurisdiction over the marine and inland fisheries of Nova Scotia and attends to all phases of administration related thereto, the Nova Scotia Government operates in several fields where provincial initiative is found to be necessary and appropriate, having regard for the importance of the fishery resources in terms of employment, industry, trade and recreation.

In the commercial fisheries, provincial government interests are the concern of the Nova Scotia Department of Fisheries. The Fishermen's Loan Board is administered by that Department and the Industrial Loan Board by the Nova Scotia Department of Trade and Industry; the first makes loans to fishermen for the purchase of boats and engines and the second makes loans for the construction or improvement of fish processing plants. Fisheries engineers perform inspection and survey duties for the Loan Boards and provide technical assistance and advice to loan applicants and others in the fisheries and allied industries, notably the boatbuilding industry. Instructors conduct courses for fishermen in the care and maintenance of marine engines, in basic navigation and in the design, construction and maintenance of gear. This program receives substantial assistance from the Technical and Vocational Training Branch of the federal Department of Labour. The on-course instruction is supplemented frequently by informal on-the-spot assistance to smaller groups who find themselves in need of technical help with particular problems. The Nova Scotia Department of Fisheries, with the financial and/or technical assistance of the federal Department of Fisheries, organizes and conducts demonstrations of fishing methods and gear of types untried in some or all of the several fishing areas of the province.

Sport Fisheries.—In recent years, Nova Scotia, through the Wildlife Division of its Department of Lands and Forests, has spent a considerable amount of money on management and research in certain lakes and streams in the province with a view to aiding the Atlantic salmon and trout fishery. A continuing program of lake and stream investigations was begun in 1961 in order to obtain information useful in the formulation of a fish management program for the future. A system of rearing ponds, capable of producing 200,000 yearling speckled trout annually have been established on the Medway River in Queens County and the Moser River in Halifax County. Several projects dealing with reclamation, farm ponds, rainbow trout and small mouth bass are also being conducted. A full-time fisheries biologist is employed by the Division.

New Brunswick.—Commercial fishing is one of the most important basic industries of New Brunswick, employing around 6,000 fishermen with annual earnings of over \$10,000,000 and about 2,800 plant workers. The annual marketed value of fish products is about \$33,000,000.

New Brunswick fisheries, both tidal and inland, are under the legislative jurisdiction of the federal Department of Fisheries, and angling in Crown waters is under the jurisdiction of the provincial Department of Lands and Mines. To supplement the activities of the federal Department of Fisheries and to make practical application of research data obtained from the Fisheries Research Board of Canada and other agencies, the New Brunswick Government created a Department of Fisheries in 1963 having three Branches—Administration Branch, Boatbuilding and Maintenance Branch, and Exploratory Fishing and Education Branch. The Department also conducts fish inspection control under authority of the Fish Inspection Act, 1964.

Since its inception in 1946, the Fishermen's Loan Board of New Brunswick, now under the administration of the Department, has disbursed over \$13,000,000 for the construction of fishing vessels and the purchase of modern gear and equipment for the commercial fishermen of the province. Loans ranging from \$1,500 to \$3,000 are made available to inshore fishermen for the purchase of lobster boats and marine engines, and amounts ranging from \$15,000 to \$225,000 are lent to offshore fishermen and companies for the construction of modern Danish seiners, purse seiners, draggers and trawlers. These amounts represent 70 p.c. of the total cost of each unit after deducting down payments and Federal Government subsidies. This long-term assistance program has been largely responsible for the doubling of the value of the fishing fleet during the past 15 years. Commercial fishermen now own a modern fleet of 90 groundfish draggers, seven steel stern trawlers, 27 Danish seiners, two steel tuna seiners, 35 herring purse seiners and more than 3,000 inshore boats.

New and improved designs of fishing vessels are under constant study by the technical staff of the Department in co-operation with naval architects, boatbuilders and fishermen. A certain pattern of standardization is followed to keep building and maintenance costs low because fishing has become very competitive with the influx of large foreign fishing vessels on Canadian east coast fishing grounds. Multi-purpose types have been successfully introduced in inshore fisheries of the Gulf of St. Lawrence area, capable of being converted easily into longliners, Danish seiners or scallop draggers. Modified versions of the 65-foot groundfish dragger, equipped with more powerful diesel engines and larger nets, have proved very efficient. Stern trawlers, the first to be built in North America, were added to the New Brunswick fleet in 1962. Two ultra-modern tuna seiners, built in a New Brunswick shipyard, are operating successfully off the south shore of the province.

Exploratory projects conducted by the Department in co-operation with the Federal Government have led to the practical introduction of many modern techniques and types of gear not generally in use by Atlantic Coast fishermen. And to educate the fishermen in the use of such vessels and gear, intensive training in navigation, motor mechanics, electronic devices, fishing gear technology, bacteriology, marine biology and other related subjects is being given at two schools of fisheries, each of which is equipped to give instruction to 50 students a year.

Sport Fisheries.—Sport fishing contributes substantially to the economy of the province, mainly through the tourist trade. Great Atlantic salmon rivers like the Miramichi, the Restigouche and the St. John are known around the world for their prolific production of this majestic game fish and attract many thousands of tourists to the province each year. Anglers catch as many as 50,000 salmon a year in the Miramichi system alone. Many other species are also sought after by both residents and non-residents in the hundreds of streams, rivers and lakes of the province.

Quebec.—The Quebec Government, through its Department of Industry and Commerce, gives much consideration to the administration of the commercial fisheries of the province. For the benefit of producers and fishermen, it operates a network of cold storage plants for the freezing and preservation of fish. The network comprises about 60 plants, together having a daily freezing capacity of 500 tons and a storage capacity of 25,000,000 lb. of fish. These plants also perform a valuable service to fishermen by providing them with frozen bait and ice. In addition, the Department owns and maintains about 125 stations in small fishing ports where fish is kept under proper conditions while awaiting collecting trucks or boats, and operates an artificial drying plant with a processing capacity of 3,000,000 lb. of fish annually. A staff of fish wardens, technicians and technologists administers fishery legislation and assists in the application of new techniques for the expansion of the industry. The central administration is located at Quebec City with offices at the principal fishing centres for administration of the Protection, Refrigeration and Maritime Economy Services. Fish inspection is carried out by federal inspectors who are vested with additional powers by the provincial government with respect to local sales.

Educational work among the fishermen and producers is conducted by the Department to teach the latest methods of fish preparation and of obtaining high-quality products. The Fisheries Training School at Grande Rivière gives to fishermen of all ages the opportunity of taking free theoretical and practical courses in fishery. Encouragement is given to the Co-operative Associations of Fishermen through the Social Economic Service of Ste. Anne de la Pocatière subsidized by the Federal Government. Under a maritime credit system, fishermen may obtain loans from credit unions for the purchase of boats and gear. Fish consumption is promoted through advertising campaigns in newspapers and magazines, exhibits at fairs, cooking demonstrations, educational films and the free distribution of fish recipes and publicity leaflets.

The Department adheres to the federal-provincial agreement on the building of dragners and longliners and assumes the building costs on a capital refunding plan. At the end of 1964, the fishing fleet of Quebec consisted of 87 dragners up to 82 ft. long, two dragners 129 ft. long, eight longliners, 49 small longliners and two Danish seiners, representing an investment of over \$7,000,000. After deduction of the federal subsidy, the cost to the fishermen was approximately \$5,000,000.

Biological and hydrographical research in the Gulf of St. Lawrence is directed by the Marine Biological Station at Grande Rivière and a laboratory is operated at Quebec City for the study of the biology of freshwater fish of the St. Lawrence River and its tributaries. The Quebec Aquarium at Quebec City exhibits freshwater and saltwater fish in 60 large tanks.

Sport Fisheries.—The Department of Tourism, Fish and Game exercises jurisdiction over the inland waters; it employs 250 full-time wardens. Licences are required for sport fishing and hunting. Four hatcheries are maintained at strategic points throughout the province—St. Faustin, Lac Lyster, Tadoussac and Gaspé. These establishments distribute speckled trout, Atlantic salmon and grey trout fry, maskinonge fingerlings and older fish in public waters.

The Department administers six parks and seven reserves in all of which, except for Mont Orford Park, excellent fishing may be found. Gaspesian and Laurentide Parks are

renowned for their trout fishing. Chibougamañ Reserve and La Vérendrye Park, situated on the height of land, are eminently suited to canoe trips in search of pickerel, pike and grey or speckled trout. Five salmon streams are open to anglers—the St. Jean River, the Petite Cascapédia River, the Matane River, the Port Daniel River and the Matapédia River. A joint committee composed of departmental officials and the directors of the federation of fish and game associations recommends the proper legislation for the maintenance of satisfactory fishing and hunting conditions and other problems arising out of the ever-changing conditions of modern life and their effect on the wildlife of the province.

Ontario.—The fishery resources of Ontario are administered by the Fish and Wildlife Branch, Department of Lands and Forests. The Branch operates under the authority of the federal Fisheries Act, the Fishery Regulations for the Province of Ontario, the Ontario Game and Fish Act and the Regulations connected therewith.

Commercial Fisheries.—The commercial fishing industry in Ontario provides employment for about 3,000 persons directly and for many more indirectly, and produces an annual yield of from 45,000,000 lb. to 55,000,000 lb. of fish. The industry, although widely scattered throughout the province, is centred chiefly on the Great Lakes, particularly Lake Erie. The principal species of fish taken commercially are perch, smelt, whitefish, pickerel, lake trout, white bass, pike, herring, chub, sheepshead, carp, catfish and bullheads, sturgeon, eels, goldeyes, rock bass, sunfish and suckers. Over one hundred smaller inland lakes are commercially fished, principally those in the northwestern portion of the province, and careful management of these lakes is essential to ensure continued production.

The types of fishing boats in use vary from small craft to 60-foot tugs, and types of gear vary from gillnets, pound-nets and trap-nets, seines and baited hooks to small hand-operated seines and dip-nets. Fishing methods and equipment have been modernized extensively during the past few years. Diesel-driven steel-hull tugs have replaced steam-driven wooden tugs, such aids as depth-sounding devices, radar, ship-to-shore and ship-to-ship communications have been developed and a better knowledge of the fish and their movements has been established from biological research findings. Modern icing facilities and transportation methods are in use as well as new types of fishing gear. Trawling has proved very efficient in harvesting smelt on a year-round basis in Lake Erie.

Most Ontario fishermen are organized into various local associations. Many of these associations are, in turn, represented by the Ontario Council of Commercial Fisheries which performs important services to the industry. The Ontario Fishermen's Co-operative and its member groups are of interest also in the organization of the fishery in the province.

Sport Fisheries.—Angling in Ontario is rapidly becoming one of the major industries of the province. With an estimated freshwater area of some 68,490 sq. miles, the province is one of the most attractive fishing areas on the Continent. Excellent angling opportunities are available for such prized fish as brook, rainbow, lake and brown trout, walleye, smallmouth and largemouth bass, pike and maskinonge. It is difficult to measure the total value of the sport fishing industry to the province but the annual revenue from the sale of angling licences alone (mainly to non-residents, as residents require a licence for provincial parks only) is in the neighbourhood of \$2,500,000. The management of this valuable resource is administered by a well-trained field staff of conservation officers and biologists located in the 22 forest districts of the province.

Provincial Hatcheries.—Ontario operates 17 hatcheries and rearing stations and excellent results have been produced in the culture and distribution of various species of game fish. The primary species reared in these operations include brook trout, rainbow trout, lake trout, smallmouth and largemouth bass, and maskinonge. Four of the finest trout-rearing stations on the Continent are located in this province—at Dorion near Port Arthur, Sault Ste. Marie, Hill Lake near Englehart, and Chatsworth.

Fisheries Research.—Research in Ontario is carried on in the Great Lakes and in inland waters. At the South Bay Mouth Station on Manitoulin Island in Lake Huron, Wheatley on Lake Erie, and Glenora on the Bay of Quinte on Lake Ontario, fishery biological stations are operated for the investigation and study of the commercial and sport fisheries on the respective lakes. In Algonquin Park, detailed studies concerning lake trout, smallmouth bass and brook trout are in progress and management techniques are being tested against the background of a creel census which has been continuous since 1936. Studies are also being conducted on walleyes, parasitology and limnology. A selective breeding experiment concerning the hybrid between lake trout and brook trout is progressing; the deep-swimming character of the lake trout and the character of maturity at early age of the brook trout are those being selected for combination in the hybrid. Co-operation by Ontario in the field of sea lamprey control is being extended through the Great Lakes Fishery Commission.

Manitoba.—Commercial fishing has been carried on in Manitoba since 1895. The province has almost 40,000 sq. miles of freshwater and 400 miles of coastline on Hudson Bay but, altogether, about 155 lakes and rivers, covering 22,000 sq. miles, are commercially fished. Some 3,500 persons are employed in primary commercial fishing and an equal number derive part of their living from fish processing and the supply of materials and services to the industry. The industry is particularly important to people living in remote northern communities where fishing provides a major part of their cash income but, even so, over two thirds of the catch is taken in the southern parts of the province. In 1963-64, Lake Winnipeg produced 10,428,000 lb., Lake Manitoba 7,561,000 lb., Lake Winnipegosis 5,656,000 lb., and other southern lakes 580,000 lb. The northern lakes produced 11,532,900 lb. The total value to the fishermen in 1963-64 was \$4,356,000 and the value as marketed was \$7,429,000. The average annual marketed catch for the past five years was 33,100,000 lb. worth \$3,900,000 to the fishermen and \$6,700,000 at the wholesale level after processing. About half the catch is taken during open water and the remainder through the ice in winter.

There are 15 kinds of fish caught commercially in Manitoba but those of highest annual value to the fishermen are pickerel, whitefish, sauger and pike. Over 90 p.c. of the catch is exported, mostly to the United States. A quantity of the less valuable kinds and some processing waste are used as food on mink ranches and for the making of meal; a small industry to process white whales (beluga) for oil and animal food has been established on Hudson Bay. Capital investment in gear, boats, warehouses, etc., approaches \$6,000,000.

Supervision of commercial fishing operations and the enforcement of the Manitoba Fishery Regulations occupy a staff of Conservation Officers who patrol the province using diesel boats during the open water season, snowmobiles and light trucks during the winter and aircraft in remote areas. The Fisheries Branch of the Department of Mines and Resources, in co-operation with the Department of Health, conducts a systematic program of plant inspection to raise the standard of sanitation and improve the processed product.

A continuing program of biological research is conducted by the Fisheries Branch to provide management information in the interest of a sustained annual yield and a program has been established to test and prove new improved netting and gear which will increase production and lower operating costs. Close liaison is maintained with the federal Department of Fisheries and the Fisheries Research Board in the effort to develop new fish products and effect more complete utilization of the province's fishery resources.

Fish culture activities include two pickerel hatcheries (Lake Manitoba and Lake Winnipegosis), a whitefish hatchery (Lake Winnipeg), a trout hatchery (Whiteshell Provincial Park) and two spawn-taking camps. Fish to replenish the commercial fishing waters are raised in the pickerel and whitefish hatcheries and several kinds of trout as well as splake and sockeye salmon are raised in the Whiteshell hatchery to be planted in sport fishing waters.

Sport Fisheries.—Angling continues to be one of the most popular and most rapidly growing forms of outdoor recreation in Manitoba, and since ice-fishing has come into vogue

many anglers are now fishing over the entire year. About 100,000 licensed fishermen, 15,000 of them from outside the province, spent an estimated \$11,000,000 in pursuit of this sport. Although their catch of about 5,000,000 lb. a year is considerably less than the commercial fishing yield, the monetary value to the province of the sport fisheries is higher. Extensive water areas are reserved for sport fishing only but others are managed for both types of use. Walleye (pickerel), northern pike and the various trout species are the main species taken. Either or both of the first two species occur in nearly every body of water in the province but trout require a more specialized habitat and occur only in select lakes and rivers.

Saskatchewan.—Approximately 32,000 sq. miles of water, about one eighth of the province's area, provide the basis for Saskatchewan's fishery resource, a resource that contributes much to the economic and recreational activity of the province. Administration of the fisheries is the responsibility of the Fisheries Branch of the Department of Natural Resources which has, at Prince Albert, five main divisions—Commercial Fisheries; Sport Fisheries; Research; Spawn Camp; and Fish Culture Station. The Branch plans policies and develops programs that will ensure the proper management and utilization of the fishery resource; interprets and explains policies, programs and regulations to the public; administers the Acts and Regulations, both federal and provincial; and adapts regulations to meet changing conditions. Its objective is to encourage efficient multi-use of the fishery, taking into consideration the interests of the various groups concerned—anglers, commercial fishermen, mink ranchers and the public generally.

The commercial catch in Saskatchewan averages about 14,500,000 lb. annually and consists mainly of whitefish and lake trout. In 1963 the total catch of 14,089,000 lb. had a gross value of \$2,710,000 from which the fishermen received \$1,300,000 on the lake. This was a slight decline from the previous year, a result of the botulism scare in the United States which adversely affected the whitefish market. Eighteen local fishermen co-operatives, with approximately 1,200 licensed fishermen (66 p.c. of the total), marketed 6,547,000 lb. of Saskatchewan's commercial production (46 p.c. of the total). During the year, 545 free Indian fishing permits and 1,016 domestic fishing licences were issued, resulting in a catch of about 1,400,000 lb. of fish, all species; the 60 mink ranchers licensed to fish for 8,637 mink breeders had an estimated production of 4,796,000 lb. of rough fish (suckers, burbot and ciscoes).

The Fish Research Division provides information for the development of fisheries management policies and programs. Study projects are conducted to determine productivity of water bodies; to secure information on abundance and relationship of fish species; to investigate ecology and assess factors that may affect environments of fish; to develop techniques with a view to achieving maximum harvest of fish populations without prejudice to continued production; and to develop techniques that will facilitate rehabilitation and stocking of small water bodies. Eleven research projects were undertaken during 1964 and work on eight lakes was completed. Limnological and fisheries surveys were continued on lakes along the highway from Lac la Ronge to the Churchill River on the Hanson Lake road and on provincial park lakes. The creel census project on Lac la Ronge was conducted for the 14th consecutive year. Spawn camps were operated at Lac la Ronge and Black Lake for the taking of lake trout, northern pike, walleye and Arctic grayling eggs. These, along with rainbow and eastern brook trout eggs secured from the United States, were incubated and hatched at the Fish Culture Station at Fort Qu'Appelle. Seventy-four water bodies were stocked with more than 30,000,000 fry, fingerling, yearling and adult-size fish. The heaviest fry stocking took place at Tobin Lake (Squaw Rapids Reservoir), where 7,000,000 walleye and 410,000 northern pike were released.

Sport Fisheries.—One of the leading outdoor recreational activities in Saskatchewan is angling. During 1963-64, 93,694 angling licences were sold, bringing in a total revenue of \$246,162; 82,971 of the angling licences were sold to residents of the province.

Alberta.—Commercial and game fishing is administered by the Fish and Wildlife Division of the Department of Lands and Forests under authority of the Fisheries Act (Canada) and the Fishery Act (Alberta).

The output of commercially caught fish in Alberta's 6,485 sq. miles of freshwater fluctuates considerably from year to year. Total production in 1963-64 amounted to 8,900,012 lb., which yielded the fishermen \$703,667 and had a marketed value of \$1,174,477. Whitefish is by far the most valuable of the commercial species taken, accounting in 1963-64 for 48 p.c. of the total value but only 24 p.c. of the quantity. By quantity, tullibee, a low-priced animal food fish, is in first place, accounting for 48 p.c. of the total but only 22 p.c. of the marketed value. Other important species taken in 1963-64, in order of marketed value, were pickerel, pike, perch and lake trout. Of the total quantity taken, 1,898,015 lb. were marketed outside the province, 1,525,160 lb. in the United States.

Sport fishing is particularly popular in the lakes and rivers throughout the province. In 1963-64, 129,244 angling licences were issued, continuing the high level of the past seven or eight years. The provincial fish culture and stocking program is aimed at keeping these waters prolific. During 1963-64, the Calgary hatchery and the Raven rearing station produced 2,401,000 trout, grayling and kokanee for stocking purposes and the majority of plantings were made in lakes and reservoirs throughout the settled areas. In addition, 3,653,000 walleye eggs, 550 adult pike and 60,750 perch were introduced into selected lakes.

Research into the survival of hatchery trout in streams was continued at the Alberta Biological Station at Gorge Creek, supplemented by investigations on recovery by anglers of stream-stocked trout at Jumping Pound creek. Continued evaluation of lake management practices was carried out through three fisheries checking stations, and biological surveys and management projects were conducted at fifteen lakes, rivers or creeks.

British Columbia.—A Fisheries Office, which was organized in 1901-02 and became very active in fish culture work, building and operating fish hatcheries and instituting scientific research into various fishery problems, was superseded in 1947 by the Department of Fisheries which in turn was superseded in 1957 by the Department of Recreation and Conservation. Commercial fisheries are represented today as the Commercial Fisheries Branch of the Department of Recreation and Conservation. Broadly speaking, the administrative and regulatory jurisdiction over the fisheries of British Columbia rests with the federal authority. The ownership of the fisheries in the non-tidal waters is vested in the Crown in the right of the province, as are the shell fisheries such as oyster fishing and clam fishing in tidal waters. The province administers these fisheries although the regulations covering them are made under federal Order in Council on the advice and recommendation of the province.

The provincial Fisheries Act provides for the taxation of the fisheries and, under civil and property rights, for the regulation and control of the various fish processing plants under a system of licensing. Provision is also made for arbitration of disputes regarding fish prices that may arise between the fishermen and operators of the various licensed plants. The administration of the Act involves the collection of revenue and the supervision of plant operations.

Regulation and administration of net fishing in the non-tidal waters of the province, including commercial fishing and authority for regulation of the game fisheries in non-tidal waters, is vested in the Fish and Game Branch which operates a number of trout hatcheries and egg-taking stations for re-stocking purposes.

The Branch co-operates closely with the Fisheries Research Board of Canada. The biological research into those species of shellfish over which the province has control,

principally oysters and clams as well as marine plants, is conducted by the Fisheries Research Board of Canada at the Pacific Biological Station, Nanaimo, B.C., under agreement with the federal and provincial authorities. The object of this research is to encourage the industry to produce better products more economically and to enable the Commercial Fisheries Branch to regulate the various species so that maximum exploitation may be obtained on a sustained-yield basis.

Section 3.—Fishery Statistics

The review of commercial fishing and marketing given in Section 1, pp. 608-611, covers the situation in 1964 and contains estimated figures for that year. However, at the time of the preparation of this Chapter, the latest statistics available in detail for both the primary industry and fish products were those for 1963 contained in the following Subsections.

Subsection 1.—Primary Production

The value of the 1963 catch of fish on the Atlantic Coast was at a very high level; it amounted to \$76,608,000, an increase of 12 p.c. over the 1962 value of \$68,373,000 and 39 p.c. over the ten-year 1953-62 average of \$55,072,000. The lobster catch was somewhat lighter in 1963 than in the previous year but was still the most valuable at \$21,281,000; cod was second at \$20,998,000.

For the second consecutive year, the value of the catch by Newfoundland fishermen was substantially higher than that of the previous year. The value of landings of all species amounted to \$20,429,000, of which cod accounted for \$12,944,000. Cod landings at 402,926,000 lb. were much heavier than in 1962, as were those of redfish and flounders and soles, but haddock dropped sharply from 38,883,000 lb. in 1962 to 13,323,000 lb. in 1963.

The value of all landings by Nova Scotia fishermen in 1963 was \$36,644,000, a record level 14 p.c. above 1962. Lobsters and scallops continued to be the most important species from the standpoint of income to the fishermen, having a landed value of \$10,746,000 and \$6,178,000, respectively. Cod was third at \$4,300,000, followed by haddock, swordfish, flounders and soles, halibut and pollock. New Brunswick fishermen also landed a more valuable catch in 1963 than in 1962, although the increase was not so spectacular. Lobsters, herring and cod were the major sources of income to the fishermen, accounting for \$7,085,000 of the total value of \$9,353,000. The herring catch, which fluctuates widely from year to year, was 133,111,000 lb. in 1963 compared with the five-year 1958-62 average of 98,473,000 lb. Returns to Prince Edward Island fishermen in 1963 were \$4,630,000, slightly below the 1962 level. Lobsters, at \$3,156,000, made up 68 p.c. of the total and oysters, at \$385,000, were next in importance. The 1963 oyster landings were the highest since 1950. The value of Quebec landings in 1963 was up slightly from 1962. A decrease in the value of cod taken was more than offset by increases for other species such as lobsters, herring and plaice.

The value of British Columbia landings in 1963 was \$40,466,000, down considerably from the 1962 value of \$49,067,000. With salmon making up over half the total, the annual fluctuations in the volume of salmon species taken materially affect the total value of the catch. Landings of all species of salmon in 1963 amounted to 119,324,000 lb. compared with 163,907,000 lb. in the previous season. Chums, pinks, cohoes and sockeye were all down. Herring landings on the other hand were 28 p.c. higher and had a value of \$6,477,000. Halibut was also higher but lower unit values resulted in a decrease in value from \$10,912,000 to \$8,249,000. The 1963 catch of tuna at 32,000 lb. was disappointing after the record catch of 487,000 lb. in 1962.

1.—Quantity and Value of Sea and Inland Fish Landed, by Province, 1959-63

Subsection 2.—Fish Products

According to commodity surveys conducted by the Dominion Bureau of Statistics, the value of sea and inland fish products produced at all industrial levels, including the value to fishermen, amounted to \$264,158,000 in 1963; this was an increase of 1 p.c. over 1962 and the highest amount on record. Most of the increase over 1962 took place in the Atlantic Provinces.

4.—Value of All Products of the Fisheries, by Province, 1959-63

NOTE.—Figures for the years 1917-58 are given in the corresponding table of previous Year Books beginning with the 1922-23 edition. Totals for five-year intervals from 1870 are given in the 1956 edition, p. 597.

¹ Includes landings by Canadian fishermen in United States ports.

² Totals differ from the sum of provincial totals because duplications resulting from inter-shippments between provinces are removed.

The annual output of canned salmon fluctuates considerably with the extent of the catch, as is shown in Table 5. This product has long been the most important of the industry, but the demand for Atlantic Coast frozen groundfish fillets and blocks has been rising so rapidly that the value of these products now runs a close second. In fact, in 1960 and 1963, years of low canned salmon production, the value of the Atlantic products was in first place.

PART II.—FURS

Section 1.—The Fur Industry*

The value of raw furs produced in Canada in the season 1963-64 amounted to \$35,259,426, or slightly less than one tenth of the value of world production of this commodity; Canada produces around one twelfth of the total world value of ranched mink pelts and about one quarter of the world's wild furs. Canadian raw fur production is therefore very important in the world fur industry.

* Prepared by A. Stewart, Production and Marketing Branch, Canada Department of Agriculture, Ottawa.

A large proportion of the Canadian raw fur output is exported, the principal varieties being mink, beaver, seal and muskrat; the value of raw furs exported in the 1963-64 season was \$30,159,312. During the same period, raw furs worth \$21,509,586 were imported, such imports consisting mainly of mink, Persian lamb, fox and muskrat.

Fur Trapping.—Despite a long period of intensive trapping, the numbers of wild fur bearers in Canada have been well maintained and production of many varieties is greater now than in 1919 when fur statistics were commenced. Some species have adjusted to life in partly settled areas and each year substantial catches of beaver, muskrat, mink, raccoon, squirrel and wolf are made in areas of mixed farm and bush land. However, for lynx, marten, fisher, otter and other wilderness varieties, the northward advance of settlement has moved back the frontier so that the principal trapping grounds now lie in the northern portions of the provinces and in the Northwest Territories. Of prime importance in maintaining the numbers of fur bearers have been the conservation and management policies instituted by the federal and provincial governments which include the establishment of wildlife preserves, parks and sanctuaries. The length of the trapping period is controlled and, where necessary, closed seasons are imposed for the protection of scarce species.

An estimated 50,000 Canadians participate annually in fur trapping activities which in recent seasons have yielded an average revenue of approximately \$12,000,000. With the exception, mainly, of native Indians and Eskimos in the more remote northern areas, few trappers now depend solely on trapline earnings for their livelihood. The modern trapper usually is a full-time or part-time wage-earner who carries on his trapping activities during weekends or off seasons. The reason for the decline in the popularity of fur trapping as a full-time occupation lies in the economics of the industry wherein returns from the trapping operation have not kept pace with rising commodity prices. The average prices realized for most of the principal varieties of wild furs were higher during the period 1920-30 than in the late 1950's and early 1960's; this, without taking into account the decreased purchasing power of the dollar since that time. Reasons for the failure of the fur industry to grow with the economy are deep-seated and mainly beyond the power of the trapper to correct. During the 1950's a fashion swing toward short-haired furs, principally mink, resulted in a sharp decrease in the demand and consequently the prices realized for many of the previously important varieties such as lynx, fox and wolf. Returns for marten and for muskrat—the latter one of the bread-and-butter furs of trappers in all areas—also declined sharply during this period. However, the long-haired furs now appear to be staging a comeback; in the 1964-65 season there was a revival of demand for many of the neglected varieties and a corresponding improvement in returns accruing to the trapper.

Fur Farming.—Up to the end of the nineteenth century almost all Canadian furs were taken from the wilds. However, around 1890 the raising of fur bearing animals under domestic conditions was started and has since grown until, in the 1963-64 season, fur farm production accounted for 62.9 p.c. of the total value of Canadian fur production. The advantages of farm production include the ability to practise quality control and selective breeding. Also, the pelts of ranch-raised fur bearers may be harvested when both quality and colour are at their peak. Through trial and error it was found that some animals, notably fox, mink and chinchilla, adapted well to production in captivity.

Fox.—During the period from around 1890 until 1945, the raising of silver foxes on Canadian farms was a thriving industry, with production in the peak year of 1939 amounting to 240,827 pelts. After 1945, increasing world production coupled with the fashion swing away from long-haired furs weakened the market so that returns to producers were often lower than production costs and production fell off rapidly. In the 1963-64 season, 837 pelts were marketed by Canadian producers at the estimated average value per pelt of \$12.50. Ironically enough, in view of the comparatively small number of pelts available,

a strong demand developed during 1964 for silver and mutation fox furs. Price realizations reflected this interest and in recent fur auctions returns were the highest in almost twenty years. It remains to be seen whether this demand will be sustained.

Mink.—In 1963 the production of 1,390,139 mink pelts from 1,475 Canadian farms accounted for 99.1 p.c. of the value of fur farm production. This industry is carried on in all the provinces, the principal producers, in order of importance, being Ontario, British Columbia, Manitoba and Alberta. The following figures indicate the growth of the industry since 1930:—

Year	Pelt Production		Average Realization	Year	Pelt Production		Average Realization
	No.	\$			No.	\$	
1930.....	3,284	10.52		1955.....	786,760	20.07	
1935.....	30,558	10.58		1960.....	1,203,853	14.03	
1940.....	229,202	9.64		1961.....	1,271,449	14.50	
1945.....	255,968	21.51		1962.....	1,295,672	15.13	
1950.....	589,352	17.08		1963.....	1,390,139	15.82	

Initially, all ranched mink were brown or dark brown in colour, produced through crosses of various strains of wild mink. However, around 1936 the first colour mutation occurred—the Silverblue or Platinum, produced from conventional dark brown parents. This mutation was quickly followed by others and breeders soon learned to produce new exciting colours, so that today there exist more than 200 shades, including variations of basic colours. The wide range of natural colours available in mink has been a major factor in the continued popularity of this fur.

The raising of mink has developed into a specialized business. The successful rancher must have a thorough knowledge of his animals' habits and requirements. Mink must be fed a carefully prepared diet tailored to meet the varying demands of the breeding, growing and furring-out seasons. Also, a sound understanding of the complex field of genetics is required for selective breeding programs through which new shades may be produced and breeding herds improved. Most of the pelts produced today are far superior in size, colour and quality to those produced in the early days of the industry. Diseases of mink have been the subject of considerable research at universities and at the Canada Department of Agriculture Experimental Fur Farm at Summerside, P.E.I. As a result of findings, most mink farmers carry out programs of preventive vaccination for control of the major diseases.

Although mink has long remained the dominant fur of the industry, steadily increasing world production of mink pelts has resulted, in recent years, in lower auction realizations. Improved ranching practices and the use of labour-saving devices have enabled producers to operate more efficiently and have helped to mitigate the worst effects of the profit squeeze occasioned by reduced returns and rising costs of operation. On early mink farms the mink were raised in individual pens in the open. Feed and water had to be carried to the mink and this limited to around 300 the number of animals that could be cared for by one operator. Today mink are raised in roofed structures with more or less open sides, housing up to several thousand animals each, and most modern operations use automatic watering and powered feeding systems.

Most Canadian mink ranchers are members of the Canada Mink Breeders' Association, which promotes Canadian ranched mink in the domestic and foreign markets and works closely with fur auction outlets in formulating plans for marketing the annual pelt crop. Funds for advertising and for promotional undertakings are obtained through a deduction of 1½ p.c. of the sales price of all members' pelts sold at auction.

Chinchilla.—Chinchillas are being raised successfully in all provinces, the principal producers in 1963, in order of importance, being Ontario, British Columbia, Alberta and Quebec. Although chinchillas adapt well to raising under domestic conditions, this is a

comparatively new industry and additional research is required on many aspects of the business. The following figures show the production of chinchilla pelts in Canada since 1954:—

Year	Pelt Production	Average Realization	Year	Pelt Production	Average Realization
	No.	\$		No.	\$
1954.....	1,460	23.45	1959.....	8,558	13.17
1955.....	1,742	27.50	1960.....	9,067	13.06
1956.....	2,705	9.65	1961.....	10,559	14.07
1957.....	4,701	13.84	1962.....	11,193	13.56
1958.....	8,336	13.43	1963.....	12,308	14.04

Fur Marketing.—Canadian furs are traditionally marketed in the raw state, being sold through competitive bidding in eight fur auction houses located in various parts of the country. Some Canadian ranched mink are also marketed in New York and substantial quantities of wild furs are sold in London, England. The fact that the pelts are sold raw, or unprocessed, facilitates their entry into the many countries that maintain tariffs on imports of dressed furs. Buyers from many countries attend the Canadian auctions, purchasing for their own accounts or acting as representatives of firms anywhere in the world. Recently there has been increasing participation in Canadian auctions by buyers from all the major European countries and their purchases of fine quality furs have contributed materially to the success of the fur auctions. However, the United States and Britain are the best customers for Canadian furs, although much of the merchandise taken by these countries is re-exported to unknown destinations (see p. 640).

Section 2.—Provincial and Territorial Fur Resource Management

Most of the fur resources of the provinces of Canada are under the administration of the respective provincial governments. Exceptions include those resources within the boundaries of the National Parks and the Indian reserves, and the fur resources of the Yukon and Northwest Territories, all of which are under the administration of the Federal Government. The Canadian Wildlife Service of the Department of Northern Affairs and National Resources is responsible for all Federal Government interests in wildlife resources except for those related to Indian affairs, which are administered by the Indian Affairs Branch of the Department of Citizenship and Immigration. The Canadian Wildlife Service co-operates with provincial governments and other agencies concerned and handles federal interests in relevant national and international problems (see pp. 33-34). Provincial fur resource management practices are discussed in the following paragraphs.

Newfoundland.—One of the most important steps taken recently by the Wildlife Division of the Newfoundland Department of Mines, Agriculture and Resources in fur resource management was the setting up of experimental beaver traplines on the Avalon and Burin Peninsulas. This system will be extended in 1965 to cover all fur bearers in other areas of the Island of Newfoundland. In the 1930's and 1940's beaver were transplanted from areas of high density to areas where there were few or no beaver and these transplants have resulted in fairly good beaver populations throughout most of the Island. The trapper is required to locate a minimum of five active beaver lodges before applying for permission to trap in trapline areas. His finds must be confirmed by a wildlife officer and he must trap according to regulations and agree to provide required information and certain organs for research purposes. This system has been quite successful in the seasons it has been in operation and it should eventually produce a relatively small number of trappers who will in effect be fur bearer managers, since the maintenance of a trapline will depend on the individual's care and attention to good management practices.

Generally, Newfoundland trapping regulations provide limited open seasons for most species. On the Island these include muskrat, otter, beaver and mink and in Labrador they

include beaver, mink, marten, muskrat, otter, fisher and Arctic fox. Trapping of other foxes, lynx and weasel is permitted throughout the year in the whole province and wolves and wolverines may be trapped throughout the year in Labrador.

It is interesting to note that the mink population on the Island has developed from fur farm escapes and is therefore concentrated in the fur farm areas of Avalon Peninsula, Springdale and Corner Brook. The first mink trapping season was declared in 1958.

Nova Scotia.—Nova Scotia's wild fur bearers include beaver, muskrat, mink, otter, fox, raccoon and weasel and the trapping of these animals provides supplementary income for several thousand persons who harvest from \$100,000 to \$200,000 worth of wild furs each year. The value, of course, depends on the numbers of each fur species available and on fur prices, both being subject to marked variations from year to year.

The beaver, once almost extinct in the province, is now the most valuable fur bearer taken. A \$2 licence is required by residents to trap a limited number of beavers (five to ten) during the approximately six-week season beginning Nov. 1. No licence is required to trap other fur bearers, although a royalty must be paid to the province for each pelt exported. These animals may be taken between Nov. 1 and Dec. 14.

Beaver research is at present being carried on in Nova Scotia to increase knowledge of this valuable animal as a preparation for better management of its population. Behaviour, feeding, movement and reproduction studies are being conducted near the Tobetic Sanctuary in western Nova Scotia, in Cumberland County in the eastern part of the province and in an enclosed area in Queens County. In addition, data on size, age, parasites and diseases are collected from beaver carcasses taken by trappers in all parts of the province.

Several trappers' associations have been started throughout the province so that the men closest to the fur resource may have some say in its wise use and management. These groups can also assist in ensuring proper handling and marketing of the raw furs and in up-grading quality, thus commanding good market prices.

New Brunswick.—A fur management program is now under way in New Brunswick. The first investigation concerns the muskrat and is being conducted in the estuary of the St. John River, one of the better muskrat areas in the province. For many years an open season on muskrat has been held in the spring. Management investigation will soon be extended to the beaver. This animal was protected against trapping for about 20 years until the first open season was declared in 1946. As a result, the beaver has made a remarkable recovery and there has been an open season each year since 1951, the annual take averaging about 7,500 pelts. It is now thought that, if heavier trapping is not done, there will soon be cause for concern over beaver damage to farms and woodlots, highways and railways.

The trapping of fisher and marten was permitted during the 1964-65 trapping season. These animals are found mainly in the northern part of the province but their numbers appear to be increasing and they are gradually working their way southward. Mink and otter are not abundant but in the two-month fall trapping season the catches average from 1,500 to 2,000 and from 200 to 250, respectively. In 1963-64, 3,279 trapping licences were issued.

Provincial legislation enables quick changes to be made in trapping seasons; thus, the autumn benefit of available fur may be utilized by a trapper or a closed season established on any fur bearer showing signs of serious depletion in numbers. A summary of trapping laws, which includes information on how the different pelts should be handled to receive the best price, is available from the Fish and Wildlife Branch of the Department of Lands and Mines.

Quebec.—The fur trade has been of considerable importance in Quebec since the beginning of New France and the province has remained in the forefront of fur producers. The principal native species, in order of importance, are beaver, mink, muskrat, hair-seal, otter, lynx and marten.

Management of wild fur bearers began in 1932 with the establishment by an official of the Hudson's Bay Company of a privately leased reserve at Rupert House. The administration of this reserve passed to the Hudson's Bay Company and a second concession, at Nottoway, was granted to the Company in 1938. Strict conservation practices were enforced in these two reserves with such success that the provincial government took over their management and has since added steadily to the area of Crown lands set aside for Indian trappers. At present, 12 reserves are under conservation: Rupert House, 7,500 sq. miles (1932); Nottoway, 11,300 sq. miles (1938); Vieux Comptoir, 30,000 sq. miles (1941); Peribonca, 12,600 sq. miles (1941); Fort George, 17,700 sq. miles (1942); Abitibi, 6,000 sq. miles (1943); Great Victoria Lake, 6,300 sq. miles (1948); Mistassini, 50,000 sq. miles (1948); Manouane, 5,000 sq. miles (1951); Roberval, 20,000 sq. miles (1951); Bersimis, 21,000 sq. miles (1951); and Saguenay, 140,000 sq. miles (1955). The number of beaver pelts alone taken from these reserves in the year ended Mar. 31, 1965 was 16,065, having a value of \$212,201.

In 1945, a separate system of registered lands for white trappers was set up in the areas of Abitibi East, Abitibi West, Rouyn-Noranda, Témiscamingue, Pontiac and part of Saguenay County. Each leaseholder is granted exclusive trapping rights on his assigned land and each is subject to strict regulation. The trapping of fur bearers, other than beaver, is not restricted on either the reserves or the registered lands except for a general regulation concerning the protection of animals and the fixing of catch limits. Recently, biological research has been undertaken to assess the results of this system.

In 1964-65, the value of the catch of wild furs in Quebec amounted to \$2,569,471—a fraction of the value of the finished product.

Ontario.—Legislation for the management of wild fur bearers had its beginning in Ontario with the setting of seasons in 1860 by an Act of Upper Canada. However, 32 years passed before there was any field staff to enforce the regulations and then began an era of restrictive legislation to protect species threatened by the earlier exploitation. Progress beyond the restrictive enforcement of open and closed seasons has come about only in the past 20 or 30 years. The first steps in this direction involved the setting aside of special Indian hunting areas in which non-Indians were not allowed to trap.

The registered trapline system was introduced in 1935 on a very small scale. This system is based on government recognition of the desirability of full utilization of the resource and the more efficient management that results when one individual enjoys the exclusive right to trap on such an area. In its early stages, surveyed townships were assigned as trapline areas but more explicit trapline boundaries, established in 1947-48, now cover the province and mostly follow natural physiographical features. At the same time, resident traplines were established in areas of patented land, which means most of southern Ontario; these are blocks of land on which trappers are licensed to trap, providing they make their own written agreements with the landowners. Trapline licences are renewable annually as long as the trapper meets the conditions of the regulations and continues to trap. Trappers may sell the equipment and improvements they have made on their lines and so have a vested interest in their traplines.

In full realization that fur is a natural resource that cannot in nature be stockpiled, and is harvested on a commercial basis only, the Ontario Department of Lands and Forests has assisted the Ontario Trappers' Association to establish their fur auction at North Bay. This allows the trappers to sell furs on a competitive market and realize their full value.

Much valuable research has been carried out on fur bearers, with present emphasis on beaver and otter. Transplantings have been successfully carried out to speed the recovery of reduced populations, particularly with beaver. A new aging technique was perfected for beaver in 1964 and an aerial beaver survey technique was developed recently.

Manitoba.—Trading in furs is Manitoba's oldest industry and the province produces some of the finest pelts on the world markets. The annual value of production varies widely, depending both on the cyclic abundance of fur bearing animals and on world prices for the pelts produced.

As the northern portion of Manitoba became more accessible following construction of the Hudson Bay Railway to Churchill, competition for fur and for trapping grounds became so severe that the fur resources were sadly depleted. In 1940, Manitoba started a program of trapline registration. The program provided security of tenure to individuals or community groups of trappers, weeded out the part-time trappers and changed harvesting of wild fur from fur mining to wild fur farming. At that time beaver were a rarity and a series of closed seasons had been declared. Since then, beaver have increased steadily and 53,963 pelts were harvested in the 1963-64 season. Within the past decade new records in the production of muskrat, beaver, mink, lynx, fisher and otter have been set for this century.

The wild fur industry is still of economic importance in the province, and particularly so for northern residents, both white and native. A program of trapper education, inaugurated in 1957 and designed to improve the general handling of furs by trappers and at the same time achieve a certain measure of standardization in pelt care, has shown gratifying results. It has been expanded to include improved trapping methods and the use of humane trap sets; a booklet, *The Trapper's Guide*, is available from the Wildlife Branch of the Department of Mines and Natural Resources.

Manitoba has been working in close co-operation with federal and other provincial agencies in the promotion of quality furs by contributing a collection of representative wild furs for exhibit at the more important European fairs.

Saskatchewan.—Before the introduction of Saskatchewan's fur conservation and development program, little was done to control the trapping of beaver and muskrat. During open seasons, trappers took every pelt available and then the season had to be closed the following year in hope of natural population build-up. This "feast and famine" policy had a disastrous effect on both the fur resources and the livelihood of trappers. Few trappers had exclusive rights to specific areas and most of them were unable to establish permanent homes in communities. Poaching was common practice and there was little economic security. Beaver began declining steadily after World War I and this affected the habitat for other fur bearers as well.

In 1944, the Saskatchewan Government set up a committee to study trapping problems and the following year the South Saskatchewan Muskrat Trapping Program was instituted. Under this plan, individuals received exclusive rights to trap on definite land locations. Owners and occupants received first consideration, with special priority given to Indians and metis on Crown lands. Muskrat quotas were established to assure continuing populations, and marketing of pelts under government supervision was instituted.

In 1946, under federal-provincial agreement, all Crown lands north of the 53rd parallel were set up as the Northern Fur Conservation Block. Up to \$50,000 a year was to be expended over the following ten years to establish and administer conservation areas, purchase equipment, pay salaries of personnel, transplant live beaver and build dams; the Federal Government agreed to assume 60 p.c. of the cost and the province the remainder. A Fur Advisory Committee, with representation from the provincial Department of Natural Resources and the federal Indian Affairs Branch was set up to supervise the program. Organization of conservation areas was left to the trappers. Five-man councils were elected in all districts, with Indian, metis and white trappers sharing privileges, obligations and responsibilities on an equal basis. Conservation measures and licensing regulations were initiated. In 1956 the agreement was extended for another ten years with minor changes and in 1962 a co-ordinating body was set up by the Fur Advisory Committee to promote better communications and understanding of the fur program.

Under the present fur program, security of trappers has been strengthened; fur bearer population, although still fluctuating to some extent, has through management reached a higher general level, particularly of beaver which is the most important fur animal, rivalled only by wild mink; quotas have put trapping on a sustained-yield basis; poaching has been almost eliminated; higher water levels resulting from the comeback of beaver have improved the habitat for other wildlife; and Indian and non-Indian trappers are sharing alike in the self-government of trapping areas and in fur management policies and programs.

Alberta.—Meetings under the auspices of the Fish and Wildlife Division of the provincial Department of Lands and Forests are held with trappers to advise them of improved methods of trapping and to help alleviate problems in trapping that arise from time to time. Studies are made by the biological staff of the Division regarding fur bearing animals, their habits and their habitat, and knowledge gained from these studies is passed on to the trapper. Pamphlets are distributed to trappers showing how and where to set traps, how to pelt the different fur bearing animals, and regulations in force. The Alberta Government submits pelts to the main fur exhibits in Canada and Europe, a policy that has increased the interest of foreign buyers in Alberta furs.

Several legislative measures have been taken in the past few years. The spring beaver season has been shortened, as a result of which Alberta has been marketing a higher grade pelt. Investigations have shown that beaver pelts coming on prime bring a higher price than pelts going off prime and the main reason for this legislation was to persuade trappers to trap beaver in winter when pelts are at their best. After protection for several years, a season on otter was established in 1964-65 on certain registered trapping areas. It is interesting to note that the number of otter pelts marketed with the open season was no larger than the number accidentally trapped previously. From this limited information it can be assumed that the otter population has not increased to any great extent. The prohibiting of mismanagement of registered trapping areas by holders, although only recently introduced, has had the effect of greatly increasing activity in trapping—areas have been taken away from persons holding them for investment and given to persons willing and able to trap, and borderline trappers have been forced to put more effort into trapping. It should be stated that the present high price of pelts has helped to make this legislation effective.

British Columbia.—The British Columbia wild fur resource is administered by the Fish and Game Branch of the Department of Recreation and Conservation. Regulations are derived under authority of the Game Act and resource use is controlled under the registered trapline system, in effect since 1926. Registered traplines are areas of Crown land allotted, for the purpose of trapping wild fur, to trappers who are resident in the province. Registration of a specific trapline is renewable on an annual basis by the trapper, subject to certain requirements of tenure aimed at conservation and sustained yield of fur species. Approximately 3,000 trappers are involved in provincial wild fur production, of whom one half are Indians.

The market value of wild fur produced during the fur harvest of 1963-64 was \$763,562, beaver comprising 47 p.c., lynx 13 p.c. and wild mink 15 p.c. Pelts of muskrat, otter, marten, fisher, squirrel and weasel made up the remainder. The 1963-64 beaver harvest was the highest since 1923, numbering 26,638 pelts.

Legislative measures entail a general shortening of the annual trapping season to restrict the harvesting of unseasonable pelts. Administrative emphasis is placed on the desirability of increasing the market value of the resource through improved pelt quality. The Branch is a member of the Canadian Fur Council.

Section 3.—Fur Statistics

Subsection 1.—Fur Production and Trade*

Total Fur Production.—Early records of raw fur production were confined to the decennial censuses when account was taken of the number and value of pelts obtained by trappers. In 1920 the Dominion Bureau of Statistics commenced an annual survey of raw fur production. For a number of years the statistics were based on information supplied by the licensed fur trappers. More recently, annual statements based on royalties, export tax, etc., have been made available by the provincial game departments (except Prince Edward Island), and these statements are used in the preparation of the statistics issued annually by the Bureau. Figures for Prince Edward Island are based on returns supplied to the Dominion Bureau of Statistics by fur dealers in that province.

Ontario continues to lead the provinces in value of fur production, accounting for 31 p.c. of the total in the 1963-64 season. British Columbia followed with 15 p.c., Manitoba with 14 p.c., Alberta 13 p.c., Quebec 10 p.c., Saskatchewan 6 p.c., the Atlantic Provinces 7 p.c., and the Yukon and Northwest Territories 4 p.c.

* Prepared by the Agriculture Division, Dominion Bureau of Statistics.

Wild Fur Production.—The principal kinds of wild fur pelts taken, according to their value in 1963-64, were beaver, mink, muskrat, otter, lynx, white fox, marten and squirrel. These eight kinds of pelts accounted for 95.6 p.c. of the total value of wild pelts produced.

¹ Includes 86 grizzly bears.

Fur Farm Production.—Mink now accounts for over 99 p.c. of the total value of fur farm production. In 1963 the number of mink pelts taken continued upward, reaching 1,390,139 with a value of \$21,989,675. The total number of all types of pelts taken was 1,406,740 with a value of \$22,179,953.

On the whole, there was little change in the number of fur farms operating in 1963 compared with 1962, some provinces reporting small increases and others small decreases. Although mink farms decreased in number from 1,505 to 1,475 in this comparison, the number of animals on those farms increased from 557,011 to 590,233. Chinchilla farms also decreased in number from 468 to 449 but the number of animals increased from 35,515 to 39,882. In 1963, 206 farms raising nutria reported 7,155 animals and 42 farms raising fox had 785 animals; the number of nutria increased by 1,229 over 1962 and the number of fox decreased by 98.

Exports and Imports.—The Canadian fur trade, both export and import, is mostly in undressed furs, the value of dressed and manufactured furs going out of or coming into Canada being a comparatively small proportion of the total. Canadian fur exports consist largely of those produced in greatest abundance, mink being by far the most valuable followed by beaver, seal, muskrat, fox, dressed raccoon and squirrel. Mink, Persian lamb, dressed seal, fox, muskrat and raccoon make up a large part of the imports. Exports and imports of furs, undressed, dressed and manufactured, to and from Britain, the United States and all countries, are given for the years 1963 and 1964 in Table 6.

¹ Included in "Other".

Subsection 2.—The Fur Processing Industry

The rather general term "fur processing" includes the fur dressing and dyeing industry and the fur goods industry. The former is concerned with the dressing or dyeing of pelts on a custom basis and the latter is a manufacturing industry that makes up fur goods such as coats, scarves and gloves.

In the 1962 survey, as fully explained in Chapter XVI on Manufactures, a change was made in the "total activity" approach and this new concept was also reflected in the 1961 data. Tables 7 and 8 give selected statistics on the new basis for 1961-63. In 1963, the number of skins treated was 5,738,549, of which mink comprised 29 p.c., muskrat 19 p.c., Persian and other types of lamb 13 p.c., raccoon 10 p.c., sheep, shearing and other types of sheep 9 p.c. and all other types of skins 20 p.c.

Section 1.—Electric Power Development

Subsection 1.—Historical and Current Trends in Power Development

Electric power development in Canada has undergone remarkable and sustained growth since the beginning of the century. From a modest 133,000 kw. of generating capacity installed at the end of 1900, Canada's installed hydro capacity rose to over 20,300,000 kw. by the end of 1964, and thermal capacity to almost 7,000,000 kw.

The chart on p. 643 shows the expansion in installed generating capacity in hydro and thermal stations that has taken place in the past fifty years. Thermal-electric power development in Canada was not well documented early in the century but it is apparent that its growth was slow and of relatively minor importance until the late 1940's. The rate of development of hydro facilities, on the other hand, tended to accelerate after the turn of the century when improvements in electric power transmission techniques were introduced and increasing emphasis began to be placed on the construction of large hydro-electric stations.

During the prosperous 1920's, demand for electricity became heavier and the rate of installation increased appreciably. Then, under the depressed conditions of the early 1930's, power demand dropped off but did not show up immediately as a drop in the installation rate because of the time lag inherent in hydro-electric power development. The completion of hydro projects initiated prior to the depression period accounted for the continuation of a high rate of capacity installation up until 1935; thereafter, poor economic conditions in the 1935-39 period resulted in a reduced rate.

In the early war years, the tremendous demand for power to drive Canada's war industries accounted for the sharp rise in installation of new generating facilities between 1940 and 1943 but in the later war years construction dropped off so that, from 1944 to 1947, a second flattening occurred in the growth curve. After the War, industrial expansion and rapidly growing residential and agricultural development placed extremely heavy demands on power generating facilities, to stay abreast of which the addition of new

* Sections 1 and 2 of this Chapter were prepared by the Water Resources Branch, Department of Northern Affairs and National Resources, Ottawa; Sections 3 and 4 were revised by the Energy Statistics Section, Industry Division, Dominion Bureau of Statistics; and Section 5 by the various provincial Commissions concerned.

GROWTH IN ELECTRIC POWER GENERATING CAPACITY IN CANADA, 1920-63

capacity was required at a rate higher than at any time in Canada's history. These demands also led to the start of an extensive program of thermal plant construction in the early 1950's, since they could not be satisfied from hydro sources alone. In the period 1950-64, the average annual rate of installation of both hydro and thermal facilities was about 1,200,000 kw., with hydro contributing two kilowatts of new capacity for each kilowatt contributed by thermal. However, it is interesting to note that the average increase in thermal generating capacity over the five years 1960-64 equalled the increase in hydro capacity and promises to surpass it in the not too distant future.

Table 1 shows the present status of installed generating capacity in hydro and thermal stations and the combined total for all stations in Canada as at Jan. 1, 1965.

**1.—Installed Hydro- and Thermal-Electric Generating Capacity,
by Province, as at Jan. 1, 1965**

Province or Territory	Hydro	Thermal	Total
	kw.	kw.	kw.

Canada.....	29,331,000	6,768,000	27,099,000

Current Trends.—Although water power traditionally has been and still is the main source of electric energy in Canada, thermal sources some day will undoubtedly become the main supplier. The choice between development of a hydro-electric power site and construction of a thermal generating station must take into account a number of complex considerations, the most important of which are economic in nature. In the case of a hydro-electric project, the heavy capital costs involved in construction are offset by maintenance and operating costs considerably lower than those for a thermal plant. The long life of a hydro plant and the dependability and flexibility of operation in meeting varying loads are added advantages. Also important is the fact that water is a renewable resource. The thermal station, on the other hand, can be located close to the demand area, with a consequent saving in transmission costs. With the current trend to large steam stations, however, a certain amount of the flexibility of location of thermal stations is lost because large steam units require considerable quantities of water for cooling purposes, making it essential that such stations be sited close to an adequate water supply.

The marked trend to thermal development which became apparent in the 1950's can be explained in part by the fact that, by that time, in many parts of Canada most of the hydro-electric sites within economic transmission distance of load centres had been developed and planners had to turn to other sources of electric energy. More recently, however, advances in extra-high-voltage transmission techniques are providing a renewed impetus to the development of hydro power sites previously considered too remote.

Because of the relatively long starting-up time required by large thermal units, thermal stations tend to lack flexibility of operation and can be used most efficiently to meet continuous load conditions. Hydro stations, on the other hand, can put generating units on the line with minimum delay and hence are admirably suited to supply power to meet the peak loads which may occur several times each day. By combining the advantages of both hydro and thermal stations in integrated supply systems, power producers are now achieving much greater flexibility of operation.

Another trend in development designed to meet the problem of varying daily loads is the use of pumped storage. An example is the Sir Adam Beck hydro development at Niagara Falls where water taken from the Niagara River above the Falls is carried by tunnel and power canal to penstocks which supply the main generating station on the bank of the Niagara River some distance below the Falls. In off-peak hours, power from the main station is used to pump water from the power canal into a reservoir maintained at a higher level; during peak-load hours, the pumps, which are dual-purpose units, operate as generators and are driven by water released from the reservoir. The pumping-generating units at this development make available an extra 176,700 kw. of generating capacity. A pumping-generating station using the same general principle is under construction on the Brazeau River in Alberta as part of the 338,440-kw. Big Bend hydro development.

Perhaps the most promising application of the pumping-generating principle is its use in conjunction with nuclear power stations. Nuclear units, in common with the larger conventional thermal units, can be used most efficiently under conditions of continuous operation. Off-peak nuclear power can be used to operate pump-turbine units and the hydro-electric power derived from operating the units as generators is available for use during periods of peak demand.

Subsection 2.—Utilization of Power

Table 2 shows electric power generating capacity in the provinces and territories under the categories "utilities" and "industries". The classification "utilities" refers to power-producing organizations who sell most of the power they develop. In some instances, it includes also certain subsidiary companies whose main purpose is to develop and sell power to a parent company for industrial purposes. The total of 22,392,000 kw. of capacity installed in plants operated by utilities represents 83 p.c. of Canada's total installed capacity at Jan. 1, 1965. The classification "industries" refers to power-producing organizations who develop power mainly for their own use. Although the figures indicate that industries have developed only 17 p.c. of Canada's total installed electric power capacity, it should be emphasized that, in addition to the power generated in their own plants, industries purchase large amounts of power from utilities.

2.—Installed Electric Generating Capacity classified by Utilities and Industries, by Province, as at Jan. 1, 1965

Province or Territory	Utilities	Industries	Total
	kw.	kw.	kw.

Canada.....	22,392,000	4,707,000	27,099,000

The pulp and paper industry in Canada, one of the world's great industrial enterprises, is a foremost user of electric energy, consuming nearly one fifth of the total electric energy generated in Canada. By far the larger portion of the energy used by this industry is derived from water power. Mill capacity for the production of newsprint is considerably greater than that of any other country in the world and in production of pulp Canada is second only to the United States. The fact that over 90 p.c. of the manufactured news-

print is exported gives some indication of the importance to the Canadian economy of this industry, the success of which is facilitated by the existence of widespread harnessable water resources.

The mineral industry consumes another fifth of the country's total energy production and approximately 75 p.c. of the electric power used by this industry is used in the smelting and refining of metals. The mining of metals is carried on mainly in two physiographic regions of the country—the Western Cordillera and the Canadian Shield. The mountainous topography and relatively high precipitation of the Western Cordillera produce many tumultuous rivers capable of development as hydro-electric power sites. The Canadian Shield, an extensive Precambrian formation stretching in a wide sweep around Hudson Bay from the Mackenzie River basin to the eastern tip of Labrador, is characterized by large numbers of lakes connected by short river sections with numerous rapids and falls also suitable for development. Thus, the incidence of large water power resources in the regions where important metal deposits have been found has greatly facilitated development of these deposits. Recent examples are the nickel mining and refining complex at Thompson in Manitoba, which uses hydro power generated in the Kelsey plant on the Nelson River, and the iron ore mining operations in Labrador, which are supplied by the Twin Falls plant on the Unknown River. That the availability of abundant supplies of low-cost electric energy is paramount to the smelting industry is well illustrated by the existence in Canada of large aluminum smelters. These smelters, constructed in conjunction with huge hydro power plants, supply one quarter of the world's requirements of aluminum, although their raw material is imported; Canada has no known deposits of bauxite.

Subsection 3.—Water Power Resources, Undeveloped and Developed

Table 3 presents a summary of developed water power in Canada and an estimate of undeveloped water power potential, based on records maintained by the Water Resources Branch of the Department of Northern Affairs and National Resources. Estimates of available power are shown for undeveloped sites only; for developed sites, the total generating capacity actually installed is indicated. It should be noted that the capacity installed at an existing hydro-electric development is frequently in excess of the continuous power available at the site. The relationship between installation and available power is explained on p. 647.

3.—Water Power Resources, by Province, as at Jan. 1, 1965

¹ Power equivalent of flow available 95 p.c. of the time.
of the time.

² Power equivalent of flow available 50 p.c. of the time.

³ Power equivalent of flow available 50 p.c. of the time.

Undeveloped Water Power Resources.—Table 3 gives estimates of undeveloped power based on different rates of flow: the first column indicates continuous power ordinarily available during periods of low discharge under existing conditions of river flow based on Q95, which is the natural or modified flow available 95 p.c. of the time; the second column shows dependable maximum power based on Q50, which is the natural or modified flow available for at least 50 p.c. of the time; and the third column shows dependable maximum power based on Q_m , the arithmetical mean flow. On rivers for which flow records are sparse or non-existent, estimates of flow are made from available information relating to run-off in the same general area. The hydraulic head used in calculating undeveloped water power is based on the actual drop or the feasible concentration of head which has been measured or carefully estimated.

It should be emphasized that the figures of the first two columns represent only the minimum water power possibilities in Canada for the reason that the estimates are based upon existing river flow and, for the most part, do not reflect the benefits of streamflow regulation that would result from the development of storage potential. On the other hand, the arithmetical mean flow figures represent the power that would be obtainable if the entire flow in the river could be regulated to provide a continuous flow of constant magnitude. It can readily be seen that, because the latter condition assumes complete regulation, estimates of potential based upon arithmetical mean flow will, if other pertinent factors are neglected, exceed the amount of installed capacity that might be expected to be installed at the site, particularly where little or no storage is available. However, recent experience in the development of water power sites has indicated that, in fact, the generating capacities installed at many sites are very considerably in excess of what might be dictated by even the arithmetical mean flow. Several major river-diversion possibilities exist, particularly in British Columbia. For this reason, the estimates of potential of British Columbia's undeveloped hydro resources have recently been boosted substantially, mainly because of the inclusion of figures based upon the diversion of rivers which, if they are developed at all, will almost certainly be developed on a combined-river basis.

Developed Water Power Resources.—The figures of installed generating capacity given in Table 3 are based on the manufacturer's rating in kilowatts as shown on the generator name-plate, or derived from the rating where it is indicated in kilovolt-amperes. The maximum economic installation at a power site can be determined only by careful consideration of all the conditions and circumstances pertinent to its individual development. It is usual practice, however, to install units having a combined capacity in excess of the available continuous power at Q50, and frequently in excess of the power available at Q_m . There are a number of reasons for this. The excess capacity may be installed for use at peak-load periods, to take advantage of periods of high flow, or to facilitate plant or system maintenance. In some instances, storage dams have been built subsequent to initial development to smooth out fluctuations in river flows. In other cases, deficiencies in power output during periods of low flow have been offset by auxiliary power supplied from thermal plants, or by inter-connection with other plants which operate under different load conditions or are located on rivers with different flow characteristics.

Thus, the extent to which the installed capacity exceeds the available continuous power at the various rates of flow is dependent upon the factors that govern the system of plant operation, and varies widely in different areas of the country. In some developments, the difference may amount to several hundred per cent. For this reason, discretion should be used in comparing the figures in the last column with those in the preceding columns, as available continuous power and installed capacity are not directly comparable. As a rough guide, however, it may be assumed that the power equivalent of the flow at Q50 represents an approximate, if conservative, estimate of hydro generating capacity remaining to be installed in Canada.

Provincial and Territorial Distribution.—The provincial and territorial distribution of undeveloped water power resources and installed generating capacity, given in

Table 3, reveals that substantial amounts of water power have been developed in all provinces except Prince Edward Island, where water power resources are meagre. As natural resource development proceeds, the fortunate incidence of water power in proximity to mineral, forest and other resources becomes increasingly apparent. There is little doubt that the existence of large amounts of potential hydro power on northern rivers will prove to be a factor of prime importance in the eventual realization of the natural wealth of Canada's northland.

The water power resources of *Newfoundland*, determined on the basis of the limited available streamflow data, are estimated to be of very considerable magnitude. On the Island, although the length of the rivers is generally not great, topography and run-off are favourable for hydro-electric power development. Of the substantial capacity installed, a very large portion serves the pulp and paper industry. In Labrador, the Churchill River and its tributaries, for the most part undeveloped, constitute one of the largest potential sources of water power in Canada.

In *Prince Edward Island* there are no large streams and water power plants are limited in size to those used to operate small mills. The water power resources of *Nova Scotia* and *New Brunswick*, although small in comparison with those of other provinces, are a valuable source of energy and make a substantial contribution to the economies of the two provinces. Numerous rivers in both provinces provide moderate-sized power sites either within economic transmission distance of the principal cities and towns or advantageously situated for use in development of the timber and mineral resources. These provinces are also favoured with abundant indigenous coal supplies.

Quebec is the richest of all the provinces in water power resources, possessing approximately 45 p.c. of the total recorded for Canada. Quebec also leads in developed water power, its present installation of 9,600,000 kw. representing about 47 p.c. of the national total. The largest single hydro-electric installation in Canada is the Quebec Hydro-Electric Commission's 1,574,260-kw. Beauharnois development on the St. Lawrence River; also notable are the Commission's Bersimis I development on the Bersimis River having an installed capacity of 912,000 kw., and the Aluminum Company of Canada Limited 717,000-kw. Shipshaw plant on the Saguenay River. A major power project which represents a significant advance in the development of Quebec's hydro-electric resources is under construction. This project, involving the harnessing of the headwaters of the Manicouagan and Outardes Rivers, will permit the eventual installation of some 5,600,000 kw. of new capacity on the two rivers. Power production in the province is facilitated by the regulation of streamflow by the provincial Department of Natural Resources through the storage dams which it owns and operates. In 1963, the Government of Quebec, through the Quebec Hydro-Electric Commission, purchased the assets of the major private electric utilities in the province.

Almost all of the sizable water power potential in *Ontario* within easy reach of demand centres has been developed and planners are looking to the more remote sites as new sources of supply. Improvements in long-distance transmission techniques have brought many of these sites within the economic orbit of demand centres. Several sites are being developed and a number of others are under investigation. Most of the hydro-electric power produced in the province comes from the generators of The Hydro-Electric Power Commission of Ontario, Canada's largest power producing and distributing organization. Ontario's largest generating station is located on the Niagara River at Queenston, where the Sir Adam Beck-Niagara Generating Stations Nos. 1 and 2, and the associated pumping-generating station have a combined generating capacity of 1,804,200 kw. In addition to the power generated in its own plants, the Commission purchases large amounts of electric power generated outside the province, chiefly in Quebec.

Of the three Prairie Provinces, *Manitoba*, with immense hydro-electric capabilities on the Winnipeg, Churchill, Nelson and Saskatchewan Rivers, is the most generously endowed with water power resources. Until recently, hydro-electric generating stations

on the Winnipeg River supplied most of the power requirements of southern Manitoba. However, with the advent of high-voltage, long-distance transmission, it may be expected that ever-increasing amounts of power from hydro-electric stations on northern rivers will be carried south to help meet the province's constantly growing power demands. The first high-voltage, long-distance link will go into service in 1965 to carry power from the Saskatchewan River in Manitoba to load centres in the southern parts of the province. Large water power resources exist in the central and northern parts of *Saskatchewan*, principally on the Churchill, Fond du Lac, and Saskatchewan Rivers. In 1963, power from the first development on the Saskatchewan River was fed into the transmission network of the provincially owned Saskatchewan Power Corporation, which serves the more settled areas of the province. These areas previously had been served by electric power from thermal plants fuelled by coal, oil or natural gas, the hydro-electric power generated in the province being used almost exclusively for mining purposes in northern areas. In *Alberta*, the principal hydro-electric developments are located on the Bow River and its tributaries and, from these developments, Calgary Power Ltd. serves most of the southern part of the province. Substantial water power resources are located in northern regions and, although these are somewhat remote from present centres of population, the advent of extra-high-voltage transmission has enhanced the prospect of their development.

As mentioned previously, *British Columbia* has many mountain streams that offer abundant opportunity for the development of hydro-electric power. In terms of recorded available water power resources, developed and undeveloped, the province ranks second in Canada and is exceeded only by Quebec and Ontario in the amount of generating capacity installed. Notable for the magnitude of their power potential are such rivers as the Columbia, the Fraser, the Peace and the Stikine. Up to the present time, however, hydro-electric developments on smaller rivers in the southern areas have satisfied the major load requirements of the province but now the immense power resources of the Peace River are in process of being harnessed and by 1968 will supplement the energy supply. Development of the Columbia River, which flows southward and crosses the international boundary, is also getting under way; it will provide initially three huge storage reservoirs and eventually make available a significant amount of 'at site' power in the Canadian portion of the basin. The foremost producer and distributor of electric power in British Columbia is the provincially owned British Columbia Hydro and Power Authority.

Power from present developments in the *Yukon Territory* and the *Northwest Territories* is used almost exclusively to satisfy the needs of local mines and adjacent settlements. Owing to the lack of developed native fuel sources and to transportation difficulties, water power is of special importance in the development of mining areas, such as Mayo in the Yukon Territory and Yellowknife in the Northwest Territories. In 1948, to encourage the development of the resources of Northern Canada, the Federal Government established what is now the Northern Canada Power Commission (see p. 137), to be responsible for the construction and management of public utility plants. In Yukon Territory, most of the resources are located on the Yukon River and its tributaries. The possibility exists of diverting the headwaters of the Yukon River through the Coast Mountains to utilize a high head near tidewater in northern British Columbia but such a development would affect adversely the potential of sites on the main river. Resources in the Northwest Territories have not been surveyed to the same extent as those in Yukon Territory but they are nevertheless known to be of considerable magnitude, particularly on rivers flowing into Great Slave Lake. Of major significance, as well, is the hydro-electric potential of the South Nahanni River, which drains to the Mackenzie River via the Liard River. On the basis of preliminary investigations, it is estimated that, with total regulation and complete use of the head susceptible of development, the hydro-electric potential of the South Nahanni River would be close to 1,000,000 kw. Indications are that the rivers draining the District of Keewatin, north of Manitoba, also will contribute materially to the total power potential of the Northwest Territories.

Subsection 4.—Thermal Power Generation

At the end of 1964, the total installed thermal generating capacity in Canada was 6,768,000 kw., about 25 p.c. of the total electric generating capacity in the country. That energy produced in thermal plants during the year accounted for only 13 p.c. of the total may be attributed in part to the fact that a considerable amount of the capacity installed is maintained for stand-by purposes. As stated earlier, however, the current emphasis on thermal plant construction is likely to continue and to become more marked as development of the nation's water power reserves becomes more complete.

Conventional Thermal Power.—Approximately 85 p.c. of all of the conventional thermal power generating equipment in Canada is driven by steam turbines. The magnitude of the loads being carried by steam plants has led to the installation of steam units with capacities as high as 300,000 kw. Even larger units, of 500,000-kw. capacity, will go into service within the next three or four years. The remainder of the load is carried by gas turbine and internal combustion equipment. The flexibility of internal combustion engines make this type of equipment particularly suitable for meeting power loads in smaller centres, especially in the more isolated areas.

Table 1 (p. 644) shows that the Provinces of Prince Edward Island, Nova Scotia, Saskatchewan and Alberta depend upon thermal capacity for most of their power requirements and that New Brunswick has slightly more thermal than hydro. For Ontario, where the present hydro capacity is about twice the thermal, forecasts based on present construction schedules indicate that by the early 1970's the province's total installed thermal capacity will have overtaken hydro.

With the exception of several sizable plants in St. John's and Grand Falls, most of the thermal-electric capacity in *Newfoundland* is made up of relatively small units used to supply power to small, often isolated, communities. With the wealth of water power readily available in the province, it is not likely that Newfoundland will experience the need for large thermal stations for some time to come. *Prince Edward Island* depends almost exclusively on thermal sources for its power supply and almost all of the province's generating capacity is oil-fuelled. In *Nova Scotia*, most of the energy generated in thermal-electric utility plants is derived from coal, with a smaller amount from petroleum fuels, and in *New Brunswick* petroleum fuels provide slightly more than half of the thermal-electric energy.

The abundance of *Quebec's* water power wealth, much of it within economic transmission distance of existing demand areas, has so far limited the application of thermal power to specific local use. However, the growing emphasis on thermal power in other parts of Canada is also beginning to be apparent in Quebec, where thermal capacity will serve not only to help guarantee an adequate power supply in the face of increasingly heavy demands but also to render the almost exclusively hydro-electric base more flexible through integrated operation. The first unit of a large thermal plant went into operation at Tracy near Sorel in 1964 and a second large plant is planned for service in the Gaspé region by 1970.

Ontario has more thermal capacity than any other province in Canada; capacity installed in the province at the end of 1964 totalled 2,865,000 kw., which was approximately 42 p.c. of the national total, and another 4,800,000 kw. is scheduled for service in the period 1965-71. The country's largest thermal station is Ontario Hydro's 1,200,000-kw. Richard L. Hearn generating station at Toronto. Three 300,000-kw. units, the largest in operation in Canada, make up the generating capacity at the Lakeview station, just west of Metropolitan Toronto, scheduled for expansion to 2,400,000 kw. by 1968. Four even larger units of 500,000-kw. capacity are planned for the Lambton station near Sarnia, installation of which will be completed by 1971.

Manitoba supplements its predominantly hydro-based power supply with a substantial amount of thermal capacity but current emphasis is on development of water power resources. *Saskatchewan*, until recently, has relied on thermal capacity to satisfy the needs of the more settled areas and hydro-electric power generated in the province has been used almost exclusively for mining purposes in the northern areas. In the past few years, however, development of storage on the South Saskatchewan River has made hydro-electric power available in the southern part of the province and no new thermal capacity is contemplated at present. The incidence of vast fuel resources accounts for the emphasis on thermal power generation in *Alberta*; the province's largest thermal plants are the 330,000-kw. gas turbine and steam station at Edmonton and the 282,000-kw. Wabamun steam station.

More than half of *British Columbia's* thermal generating capacity is installed in three plants located in the Vancouver area. The capacity of the largest of these plants, the 300,000-kw. Burrard generating station, is expected to be increased to 600,000 kw. by 1967 but the addition of a further 300,000 kw. scheduled at Burrard may be delayed by the availability of Peace River power in 1968.

Thermal-electric energy satisfies most of the power requirements in the *Northwest Territories*; in *Yukon Territory*, hydro is the larger contributor. Most of the thermal-electric energy in the Territories is generated by small diesel units.

Nuclear Thermal Power.—Commercial electric power generated from the heat of nuclear reaction became a reality in Canada in 1962 when the 20,000-kw. Nuclear Power Demonstration station at Rolphton, Ont., fed power for the first time into a distribution system in Ontario. The NPD station is the forerunner in a series of large nuclear stations that will shoulder more and more of Canada's rapidly growing power loads.

Research into reactor design and the application of nuclear energy in the electric power field are among the more important responsibilities of Atomic Energy of Canada Limited, a Crown company incorporated in 1952 (see also pp. 398-401). AECL has concentrated its efforts on the development of the CANDU reactor, which uses natural uranium as a fuel and heavy water as the moderator. By using heavy water as the moderator, a high energy yield can be obtained from natural uranium and, since natural uranium is a low-cost nuclear fuel, the cost of fuel is a minor component in the cost of producing power. Natural uranium has the added attraction of being available in commercial quantities in Canada.

The Canadian nuclear power reactor also offers the simplest of nuclear fuel cycles. Sufficient energy can be extracted from the fuel so that the economics of the system do not require a value to be placed on the spent fuel. There is, therefore, no need to carry out costly chemical processing of the spent fuel unless the worth of the remaining contained fissile material becomes sufficiently high to make chemical processing an economic proposition. The spent fuel is an ideal package for simple underwater storage and no large volume of highly radio-active liquids from a chemical processing plant has to be handled and contained.

The NPD station has been used extensively to demonstrate the ability of the system to operate at a high capacity factor and to determine the nature and predictability of outages. Fuel changes while the system is in operation have become routine and a considerable amount of research into the sources of heavy water losses has been carried out. As a result of this research, losses have been cut considerably and the NPD station is demonstrating that a very acceptable heavy water loss rate is attainable.

At Douglas Point on the shore of Lake Huron, the country's first full-scale nuclear power station is nearing completion. The station, being built with the co-operation of Ontario Hydro, will house a 200,000-kw. CANDU reactor and will produce first power in 1965. Experience gained in the design and operation of this reactor has encouraged the development of even larger units and plans have been announced for the construction of a two-unit, 1,080,000-kw. nuclear station to be built near Toronto, with in-service dates for the two units scheduled for 1970 and 1971.

To complement the research facilities at Chalk River, Ont., AECL is building a nuclear research establishment at Whiteshell, about 65 miles northeast of Winnipeg, Man. The first major experimental facility will be an organic cooled, heavy-water-moderated reactor with an initial design power output of 40,000 kw.

Section 2.—Progress in Construction of Generating Facilities, 1964

In 1964, a net total of 754,000 kw. of electric power generating capacity was installed in Canada to help meet the nation's constantly growing requirements for electric power; the total included 481,000 kw. of thermal capacity and 273,000 kw. of hydro. This new capacity put into service boosted the nation's total installed hydro generating capacity to 20,300,000 kw. and total installed thermal capacity to 6,800,000 kw. On the basis of current forecasts, a total of 2,300,000 kw. of additional capacity should come into operation in 1965. Hydro will account for 1,400,000 kw. and thermal for the remaining 900,000 kw. Looking farther ahead, new capacity currently under construction or scheduled for service within the next few years should yield an additional 15,100,000 kw., of which 9,200,000 kw. will be hydro and the remainder thermal. These estimates do not include any of the vast potential that will eventually be developed on the Churchill (Labrador), Columbia and Nelson Rivers and on a number of other major river systems in Canada.

Atlantic Provinces.—In *Newfoundland*, the Newfoundland and Labrador Power Commission has been given responsibility for developing the Bay d'Espoir site on the Salmon River, generating capacity at which will total 459,000 kw. in six units; three units will be in service by the end of 1967. Development of the huge hydro potential of Churchill Falls on the Churchill River in Labrador (formerly Grand Falls on the Hamilton River) awaits an agreement concerning transmission routes to potential markets. For full development of the 1,040-foot fall, Hamilton Falls Power Corporation Limited proposes an installation of ten units, each rated at 391,400 kw. Early in 1964, United Towns Electric Company Limited completed construction at Salt Pond near Burin on Burin Peninsula of a thermal plant housing three diesel units, each rated at 500 kw. Elsewhere in the province, new thermal capacity totalling 5,110 kw. was placed in service during the year.

In *Nova Scotia*, the Nova Scotia Light and Power Company Limited plans to put a 100,000-kw. unit into service at the Tufts Cove thermal station near Dartmouth. This is the first of a multi-unit development that may eventually exceed 500,000 kw. in capacity. Two hydro developments at Lequille on the Allain River and at Alpena on the Nictaux River, with an estimated total capacity of 16,200 kw., are being considered by the Company. Under construction for the Nova Scotia Power Commission are two developments at Riverdale on the Sissiboo River and at Wreck Cove on Wreck Cove Brook, which would have a total generating capacity of 73,500 kw. Seaboard Power Corporation Limited is expanding its 72,000-kw. steam plant at Glace Bay by the addition of a 36,000-kw. unit scheduled for early 1966. The unit will be owned by the Nova Scotia Power Commission and will supply power to the heavy-water plant under construction in the area. Imperial Oil Company's 3,750-kw. thermal plant at Dartmouth is expected to be in service in mid-1965.

In *New Brunswick*, work on the New Brunswick Electric Power Commission hydro plant at Sisson on the Tobique River continued in 1964; the plant will house a single 10,000-kw. unit and be in operation in September 1965. The first two units at the Commission's hydro station at Mactaquac on the St. John River are expected to go into service early in 1968; the plant, designed for six 100,000-kw. units, will be completed by 1976. The capacity of the Courtenay Bay steam plant at East Saint John is being extended to 160,840 kw. by the addition of a 13,340-kw. unit in early 1965 and a 100,000-kw. unit in

July 1966. The Maine and New Brunswick Electric Power Company Limited hydro plant at Tinker on the Aroostook River will be more than tripled in capacity when a new 24,600-kw. unit goes into service in April 1965.

Quebec.—In 1963, the Government of Quebec, through the Quebec Hydro-Electric Commission, nationalized the assets of the province's major private power utilities. By the end of 1964 the takeover had involved, in addition to the privately owned utilities, 45 electric co-operatives and three municipal electric systems.

The province's ambitious program of power development proceeded on schedule in 1964. Available year-end information indicates a total of 6,426,400 kw. of new generating capacity, most of it hydro, either under construction or scheduled for construction; of this total, 897,800 kw. is scheduled to go into service in 1965. During the year, Hydro-Quebec put 199,000 kw. of new hydro capacity into service at two plants on the Ottawa River. At Carillon, four 46,750-kw. units were installed, completing the development of the station, which has a total capacity of 654,500 kw. in 14 units. A 12,000-kw. unit installed at the Rapid II plant on the Upper Ottawa River brought the total plant capacity to 48,000 kw. A new hydro station being built at Rapides des Îles on the Quinze River will supply power to the rapidly developing northwestern region of the province; two 26,250-kw. units will go into service in 1966 and two similar units will be installed as local power demands require. The station will eventually be operated by remote control.

The major component in Quebec's current program of hydro expansion is the massive Manicouagan-Outardes development now under construction. The project involves harnessing the power of the two rivers by building a series of six hydro plants and extending the capacities of two existing plants to provide a total of over 5,500,000 kw. of new generating capacity. Manic 2, eleven miles from the mouth of the Manicouagan River, will be the first of the new plants to supply power. Eight units will provide a total capacity of 1,016,000 kw., five of which will be in service in 1965, the sixth and seventh in 1966 and the eighth in 1967. By the end of 1964, concreting was more than half completed on the buttressed, multi-arch dam at Manic 5. The dam will be over 4,000 feet long and some 703 feet high at the highest point above bedrock, one of the highest and most massive dams of its kind in the world. The reservoir at Manic 5 will store 115,000,000 acre-feet of water and will take eight years to fill. The power plant, designed for eight generators each rated at 168,000 kw., will produce first power in 1970.

Excavation for the powerhouse and penstocks at the Manic 1 site was completed in 1964. Manic 1 will have a total generating capacity of 180,000 kw. in three units and will go into service in 1966. Preliminary work was progressing at Manic 3 and at Outardes 3 and 4. Manic 3 is expected to house seven units with a total capacity of 1,123,000 kw.; first power is scheduled for 1972. Outardes 3 is designed for a capacity of 761,600 kw. in four units; Outardes 4 is designed for 644,000 kw. in four units. Initial operation for the two Outardes River stations is planned for November 1968. Flow regulation on the Manicouagan and Outardes Rivers will permit a total increase of 502,500 kw. in the capacities of two existing plants.

Energy for the Manicouagan-Outardes developments will be fed to load centres in the province via three 735-kv. transmission lines. The operating voltage of 735 kv. is the highest planned for long-distance transmission in Canada and is one of the highest in use anywhere in the world.

The Commission's new steam plant at Tracy near Sorel went into operation in 1964 with one unit rated at 150,000 kw. A second unit will be added in 1965 and the station will reach its full capacity of 600,000 kw. in four units by 1967. Plans for a 300,000-kw., two-unit thermal plant for the Gaspé Peninsula have been announced. The new station is scheduled for operation in 1970.

Ontario.—During 1964, the development program of The Hydro-Electric Commission of Ontario included among its main features construction of three new hydro stations,

construction of a nuclear-thermal station and the extension of an existing conventional thermal station. The hydro stations under construction are the Harmon and Kipling stations on the Matagami River and Mountain Chute on the Madawaska River. The nuclear-thermal plant is at Douglas Point on the shore of Lake Huron and the conventional thermal station being extended is the Lakeview generating station near Toronto. At the Harmon development, two 64,600-kw. units will go into service in mid-1965; the two additional units provided for have not been scheduled. At the Kipling site, three miles downstream from Harmon, two 62,700-kw. units will be in service by mid-1966; two additional units have also been provided for at this site. Preliminary work was begun in 1964 at the Mountain Chute site, where power will be supplied by two 80,000-kw. units scheduled for commissioning in late 1967.

Installation of the major components at the 200,000-kw. nuclear station at Douglas Point was almost complete at the end of 1964. This station, being built by Ontario Hydro with the co-operation of Atomic Energy of Canada Limited, will go into service in late 1965. Ontario Hydro is to proceed with design and construction of a large nuclear plant in southern Ontario. The preliminary schedule calls for the installation of two 540,000-kw. units to be in service in 1970 and 1971, respectively, and the eventual installation of additional units.

A third 300,000-kw. unit was installed in 1964 in the Lakeview generating station, just west of Metropolitan Toronto, and five more units are scheduled for initial operation between 1965 and 1968 to bring the station's capacity to 2,400,000 kw. A large conventional thermal station, to be known as the Lambton generating station, is to be built by Ontario Hydro near Courtright, about 14 miles south of Sarnia. It will ultimately house four 500,000-kw. units, one of which is scheduled for initial operation in each year from 1968 to 1971, inclusive.

In December 1964, Great Lakes Power Corporation Limited completed the installation of a 15,000-kw. unit at a new plant located about six miles upstream from the mouth of the Montreal River at Lake Superior.

Prairie Provinces.—In *Manitoba*, construction at the Grand Rapids site on the Saskatchewan River continued in 1964. At the site, being developed by Manitoba Hydro, all the main structures were essentially complete and three 100,000-kw. units were scheduled for service during 1965. Investigation of the power potential of the Nelson River continued during the year and the information obtained is being used to determine the capital cost of power development at Nelson River hydro sites.

In *Saskatchewan*, where previously the emphasis was on power from thermal sources, hydro-electric capacity continues to increase. The first hydro power generated in the province to serve the Saskatchewan Power Corporation's distribution network became available in 1963 from the generators at Squaw Rapids on the Saskatchewan River. By the spring of 1964, six generators at Squaw Rapids provided a total capacity of 201,000 kw. and two additional units of 43,000 kw. each are scheduled to be commissioned in 1966 and 1967, respectively. At the South Saskatchewan River project near Outlook, being built by the Prairie Farm Rehabilitation Administration for irrigation purposes, Saskatchewan Power Corporation will install two 62,200-kw. generators for service in September 1968 and a third for service in 1969. The power site is known as Coteau Creek.

In *Alberta*, construction of the main features of the Calgary Power Ltd. Big Bend hydro development on the Brazeau River was in its final stages at the end of 1964. At this site, water will be carried from the storage reservoir via a 12-mile canal to the penstocks which will convey the water to the turbines. A pumping-generating plant is incorporated in the development at the outlet of the storage reservoir. By the end of 1964, two of the four penstocks were in place, the first turbine-generator unit was installed in the powerhouse ready for operation early in 1965, and work was under way on the installation of a second unit scheduled for service in late 1966. The generator for the first unit is rated

at 144,000 kw. and that for the second unit at approximately 175,000 kw. The pumping-generating station is designed for two units, each rated at 9,720 kw. The Company's Wabamun thermal plant is to be extended to house an additional 300,000 kw. of generating capacity for operation in late 1967, bringing the total capacity of the plant to 582,000 kw.

Canadian Utilities Limited in 1964 added a second 32,000-kw. coal-fired steam turbo-generator at their Battle River plant at Forestburg and tenders were called for the turbine component of a 75,000-kw. coal-fired unit scheduled for commissioning in 1968. A study to determine the hydro-electric potential of the Smoky River in the Grande Prairie-Peace River area indicates that a development of about 400,000 kw. may be feasible.

British Columbia.—Substantial progress on the British Columbia Hydro and Power Authority's Portage Mountain hydro development on the Peace River was reported in 1964. The development is planned for ten units with a total capacity of 2,270,000 kw., three of which are scheduled for service by the autumn of 1968. In 1964, the three 48-foot-diameter, 2,500-foot-long tunnels, built to carry the river past the construction site, successfully handled the largest flow on record of the Peace River.

During the year, Canada and the United States exchanged instruments of ratification of the Columbia River Treaty and Protocol, clearing the way for construction of the three storage dams that will regulate the flow of the Columbia River for power and flood prevention purposes. Under the terms of the Treaty, Canada is entitled to one half the power benefits accruing in the United States from the regulation of 15,500,000 acre-feet of water stored in Canada behind the proposed Duncan Lake, Arrow and Mica Dams and one half the value of the estimated flood damage prevented in the United States through the operation of the proposed dams for flood control. Under the terms of the Treaty, the three storage dams are required to be in operation by 1973.

The third 150,000-kw. unit at British Columbia Hydro's Burrard thermal station is scheduled for service early in 1965 and a fourth unit will be in service by September 1967. The ultimate capacity at Burrard will be 900,000 kw. in six units.

Yukon and Northwest Territories.—Construction work at the Northern Canada Power Commission's Twin Gorges hydro station on the Taltson River progressed on schedule during 1964. The station, some 35 miles northeast of Fort Smith, N.W.T., will house a single 18,000-kw. unit which is scheduled for service in October 1965. New thermal capacity added in the Northwest Territories in 1964 amounted to 460 kw., and in Yukon Territory, 110 kw.

Section 3.—Power Generating Capability and Load Requirements

Power generating *capability*, as covered in this Section, is the measurement of the available generating resources of all hydro and thermal facilities at the time of the one-hour firm peak load for each reporting company, and is not equal to the *capacity* of such generating facilities. For example, a hydro plant may have a capacity of 100,000 kw. but if, at the time of peak load, the water available for generation is only 80 p.c. of the plant capacity requirements, then its capability is 80,000 kw.

Total generating capability has grown at a rapid rate since 1954. The annual rate of increase was 6.9 p.c. in the ten-year period 1954-64 and 3.9 p.c. in the four-year period 1960-64. In comparison, the forecast rate of growth for the years 1965-69 is 7.4 p.c.; thermal generating capability is expected to grow at the average rate of 11.8 p.c. a year in the forecast period compared with 14.2 p.c. in the period 1954-64 but hydro-electric capability is expected to increase at 6.2 p.c. a year compared with 5.5 p.c. in the 1955-64 period. This increased rate of growth in hydro generating capability in the forecast period is attributable to the large power projects now under construction in relatively remote areas which will be completed within the next few years.

Among the provinces, Quebec has the largest generating capability, followed by Ontario, British Columbia and Alberta. Quebec also has the largest hydro-electric generating capability, followed by Ontario and British Columbia, but Ontario has the largest thermal capability, followed by Alberta and British Columbia. The first nuclear capability is scheduled in Ontario for late 1965.

The largest absolute growth in generating capability for the forecast years is indicated for Quebec amounting to 3,683,000 kw., followed by Ontario 3,517,000 kw., British Columbia 1,752,000 kw., and Alberta 822,000 kw. Quebec will meet most of its increased generating capability by adding 3,140,000 kw. in hydro capability and 543,000 kw. in thermal capability. Ontario will add 398,000 kw. hydro and 3,119,000 kw. thermal, the latter including 200,000 kw. nuclear, and British Columbia will add 1,374,000 kw. hydro and 378,000 kw. thermal. Thus, it is apparent that thermal capability is becoming of greater importance, partly because of decreasing availability of hydro resources in provinces such as Ontario and partly because technological advances have made possible much more efficient use of thermal fuels in the operation of thermal base load plants.

Firm power peak load is the measure of the maximum average net kilowatt demand of one-hour duration from all loads, including commercial, residential, farm and industrial consumers as well as the line losses. Such load demand increased at the rate of 7.1 p.c. a year from 1954 to 1964 but only 6.9 p.c. a year from 1960 to 1964; peak load demand is forecast to increase at the average rate of 6.9 p.c. a year in the period 1965-69. As a result of the rapid increase in generating capability and the somewhat slower but steady increase in the peak loads, together with the slight reduction in deliveries of firm power to the United States, the indicated reserve on net generating capability increased each year from 1954 to 1964, with the exception of 1961, 1963 and 1964. The forecast is for increases from 1965 to 1969 with the exception of 1966. The reserve ratio as a percentage of firm power peak load, which reached a high of 28.2 p.c. in 1960, is expected to decrease to 18.9 p.c. in 1969.

Section 4.—Electric Power Statistics

Electric power statistics presented in this Section are based on reports of all electrical utilities and all industrial establishments that generate energy regardless of whether or not any is sold and therefore show the total production and distribution of electric energy in Canada. Utilities are defined as companies, commissions, municipalities or individuals whose primary function is to sell most of the electric energy that they have either generated or purchased. Industrial establishments are defined as companies or individuals that generate electricity mainly for use in their own plants.

The current series of electric power statistics dates back to 1956. Earlier reports, entitled *Central Electric Stations*, were concerned solely with the electrical utility industry and hence excluded statistics relating to power produced by industrial establishments for their own use, although power sold by such establishments was included.

The figures of total water and thermal power generated for the years 1951-55 shown in Table 6 are compiled on the old basis, figures for 1956 are shown on both bases for comparative purposes, and those for later years are on the new basis.

6.—Electric Energy Generated, by Type of Station 1951-63, and by Province 1962 and 1963

Year and Province or Territory	Generated by—		Total	Year and Province or Territory	Generated by—		Total

¹ New series, see immediately preceding text.

Of the total generation in 1963 of 122,238,194,000 kwh., 84.9 p.c. was produced from water power and 15.1 p.c. was generated thermally; the proportions differed somewhat among provinces as shown in the following statement.

Province	Hydro	Thermal	Province or Territory	Hydro	Thermal
	p.c.	p.c.		p.c.	p.c.
Newfoundland.....	94.0	6.0	Manitoba.....	97.6	2.4
Prince Edward Island.....	—	100.0	Saskatchewan.....	33.1	66.9
Nova Scotia.....	37.7	62.3	Alberta.....	19.4	80.6
New Brunswick.....	55.4	44.6	British Columbia.....	92.5	7.5
Quebec.....	99.2	0.8	Yukon and N.W.T.....	83.7	16.3
Ontario.....	77.5	22.5			

Table 7 gives summary figures of power production and distribution classified by province, and Tables 8 and 9 give figures classified by type of production establishment. Total installed capacity in Canada amounted to 26,300,644 kw. in 1963, an increase of 1,333,644 kw. over 1962. Of the 1963 total, 21,200,117 kw. were accounted for by utilities and the remainder by industrial establishments. During 1962 and 1963 total sales to ultimate customers amounted to 84,331,799,000 kwh. and 89,209,338,000 kwh., respectively, of which 97.2 p.c. was sold each year by utilities.

Sales to power customers made up 59.4 p.c. of the total in 1962 and 58.4 p.c. in 1963, sales to domestic and farm customers were 28.1 p.c. and 28.4 p.c., and commercial sales 11.5 p.c. and 12.2 p.c. in the respective years. Exports to the United States in 1963 amounted to 3,612,834,000 kwh. compared with 4,112,411,000 kwh. in 1962.

Average domestic and farm consumption rose from 4,873 kwh. in 1962 to 5,084 kwh. in 1963. Among the provinces, the averages in 1963 varied from a low of 2,023 kwh. in Prince Edward Island to a high of 6,630 kwh. in Manitoba. For domestic and farm customers the average annual bill was \$77.10 in 1963 as against \$75.24 in 1962, an increase of 2.5 p.c.

Although many utilities do not keep records on farm customers separate from other domestic customers, the data reported on farm service indicate that the average consumption rose from 5,204 kwh. per customer in 1962 to 5,985 kwh. in 1963 and the average bill from \$106.55 to \$117.16.

In 1963, natural gas accounted for 22.4 p.c. of thermal generation by utilities, coal for 68.9 p.c., petroleum fuels for 8.1 p.c. and nuclear fuel for 0.6 p.c.; corresponding proportions in 1962 were 28.1 p.c., 60.0 p.c., 11.7 p.c. and 0.2 p.c., respectively.

Section 5.—Public Ownership and Regulation of Electrical Utilities

Federal Government regulation of electrical utilities, particularly with respect to the export of electric power and the construction of lines over which such power is exported, falls within the jurisdiction of the National Energy Board established in November 1959 and concerned with all matters relating to energy resources within the jurisdiction of the Parliament of Canada (see Domestic Trade Chapter XXI, Part II, Section 4 for a brief survey of the functions and operations of the National Energy Board).

Power is generated in Canada by publicly and privately operated utilities and by industrial establishments. Table 9, p. 661, giving statistics by type of establishment, shows that 67 p.c. of the total electric power generated in 1963 was produced by publicly operated utilities, 9 p.c. by privately operated utilities and 24 p.c. by industrial establish-

ments. However, ownership differs greatly in different areas of the country. Quebec output until recently was predominantly from privately owned plants and in Ontario almost all electric power is produced by a publicly owned utility. Figures for 1962 and subsequent years will show a much greater proportion of publicly operated electrical utilities since they will reflect the recent provincial take-over of privately owned facilities in both British Columbia and Quebec.

Because of the absence of free market determination of prices and regulation of services in an industry that is semi-monopolistic, regulation of electrical utilities has been attempted in most provinces. Neither Newfoundland nor Prince Edward Island has a provincially operated electric power system, although in the former province a Commission, known as the Newfoundland Power Commission, was established by the provincial government in 1954 for the purpose of supplying electric power wherever needed throughout the province, particularly to rural areas. In Prince Edward Island, the town of Summerside and surrounding area is served by the municipally operated Town of Summerside Electric Light Department. The functions and activities of provincially operated electric power commissions in the other provinces are summarized in the following paragraphs.

Nova Scotia.—The Nova Scotia Power Commission was created under the Power Commission Act of 1919 with the function of supplying electric power and energy by the most economical means available. The Rural Electrification Act of 1937 greatly increased the possibilities for retail service by providing financial assistance to equalize cost and revenue of extensions approved by the Governor in Council. In 1941 an amendment to the Power Commission Act authorized the Commission, subject to the approval of the Governor in Council, to regulate and control the generation, transmission, distribution, supply and use of power in the province. Certain investigatory work is carried on in the province by the Federal Government in close association with the Commission, but the control of water resources is vested in the Crown and administered under the provisions of the Nova Scotia Water Act, 1919. The Commission pays regular fees for water rights.

The territory of the Commission extends over the entire province and embraces six systems which include 25 generating stations and more than 5,230 miles of transmission and distribution lines. Installed capacity at the end of November 1964 was 184,458 kw. of which 96,708 kw. was hydro capacity. New power plant construction under way in Nova Scotia during 1964 is outlined on p. 652. Financially, the Commission is self-supporting, repaying borrowings from revenue. The balance sheet at Nov. 30, 1964 showed total fixed assets of \$83,568,125, including work in progress amounting to \$4,251,896.

¹ Hydro unless otherwise noted.

New Brunswick.—The New Brunswick Electric Power Commission was incorporated under the Electric Power Act, 1920. Generating stations owned by the Commission at Mar. 31, 1965 were as follows:—

<u>Plant</u>	<u>Type</u>	<u>Capacity</u> kw.	<u>Plant</u>	<u>Type</u>	<u>Capacity</u> kw.
Grand Falls.....	Hydro....	63,000	Courtenay Bay.....	Steam.....	63,365
Musquash.....	Hydro....	6,960	Saint John (Dock St.)....	Steam.....	16,000
Tobique.....	Hydro....	20,000	Chatham.....	Steam.....	32,500
Beechwood.....	Hydro....	112,500	Grand Manan.....	Diesel.....	1,150
Milltown.....	Hydro....	3,036			
Grand Lake.....	Steam.....	101,250	TOTAL CAPACITY.....		419,761

All the above generating units with the exception of Grand Manan are interconnected in a province-wide grid system. The statistical information given in Table 13 shows the growth of the Commission's undertakings since 1961. Power plant construction under way in New Brunswick during 1964 is outlined at p. 652.

Quebec.—*Stream and Reservoir Control.*—The Quebec Streams Commission was created in 1910 (SQ 1910, c. 5) and given additional powers in 1912 (RSQ 1925, c. 46) and 1930 (SQ 1930, c. 34); it was authorized to ascertain the water resources of the province, to make recommendations regarding their control, and to construct and operate certain storage dams to regulate the flow of streams. On Apr. 1, 1955, the Commission was abolished and its powers and attributions transferred to the Hydraulic Resources Department, now the Department of Natural Resources. The rivers controlled by the Commission at the time of transfer, either by means of dams on the rivers or by regulating the outflow of lakes at the headwaters, were: the St. Maurice, the Gatineau, the Lièvre, the St. Francis, the Chicoutimi, the Au Sable and the Métis. The Commission also operated nine reservoirs on the North River, two in the watershed of the Stc. Anne de Beaupré River, and one at the outlet of Lake Morin on Rivière du Loup (lower).

Storage reservoirs otherwise controlled or operated are: the Lake St. John, the Lake Manouane and Passe Dangereuse on the Peribonca River controlled by the Aluminum Company of Canada; the Onatchiway on the Shipshaw River controlled by Price Brothers and Company Limited; Memphremagog Lake on the Magog River controlled by the Dominion Textile Company; and Témiscamingue and Quinze Lakes on the Ottawa River controlled by the federal Department of Public Works. Storage reservoirs under the

control of the Quebec Hydro-Electric Commission are: Témiscouata Lake on the Mada-waska River, Kipawa Lake on the Ottawa River, Lac Dozois on the upper Ottawa River, Lac Cassé in the Bersimis River watershed and Lac Ste. Anne on the Toulmoustou River, a tributary of the Manicouagan River.

The Quebec Hydro-Electric Commission.—The Quebec Hydro-Electric Commission was established in 1944 (SQ 1944, c. 22) for the purpose of supplying power to the municipalities, to industrial and commercial undertakings and to citizens of the Province of Quebec at the lowest rates consistent with sound financial administration. On May 1, 1963, the Commission acquired control of the following privately owned electrical utilities operating in the Province of Quebec: the Shawinigan Water and Power Company, the St. Maurice Power Corporation, the Quebec Power Company, the Southern Canada Power Company, the Gatineau Power Company, the Northern Quebec Power Company, the Saguenay Electric Company, and the Lower St. Lawrence Power Company. As a result of these transactions, all electricity production, except for facilities operated by certain industrial organizations in their own manufacturing operations, was brought under the control of a single authority. The services of the Commission now cover virtually the entire province except for local distribution of small amounts of electricity by some municipalities, most of which is purchased from the Commission or its subsidiaries.

At the end of 1964 the Commission controlled, among other assets, the following hydro-electric and thermal-electric plants:—

Item	Hydro-Electric		Thermal-Electric	
	Plants	Capacity ¹	Plants	Capacity
	No.	kw.	No.	kw.
Hydro-Quebec only.....	8	4,098,760	1	36,000

Saguenay Electric.....	5	8,865	—	—
Lower St. Lawrence Power.....	4	12,100	4	8,327
TOTALS.....	53	6,365,741	15	196,457
Purchases by Hydro-Quebec and subsidiaries.....	...	699,000	—	—

¹ Dependable hydro-electric peak capacity at time of freeze-up approximated 5,600,000 kw.

These facilities now permit the balanced distribution of power throughout Quebec and the most efficient use of the water power resources of the province. It is expected that complete administrative reorganization will be accomplished by the end of 1965. Nationalization of service will be of particular benefit to some 20,000 customers in the northwestern area where the system frequency is being changed from 25 cycle to 60 cycle. The change-over is scheduled for completion in 1965 at an estimated cost of \$12,000,000.

Hydro-Quebec and its subsidiaries, at the end of 1964, served virtually all communities in the province. Customers numbering 1,492,333 were supplied and the distributed primary power demand was 6,150,000 kw. Total power distributed was 6,229,000 kw. Power distributed is given in terms of the net output of the sources of supply made available

to each system coincident with the time of the Montreal primary peak; it also includes purchases of power from other power producers. The distribution of primary power to systems of Hydro-Quebec on the day of primary peak in 1964 was as follows:—

<u>System</u>	<u>Primary Power</u>
	kw.
Main System—	
Southwestern Quebec—	
Montreal Metro area.....	1,918,000

Consolidated system <i>primary</i> peak load at source.....	6,206,000
Coincident <i>secondary</i> load.....	79,000

Ontario.—The Hydro-Electric Power Commission of Ontario is a corporate entity, a self-sustaining public enterprise endowed with broad powers with respect to the supply of electricity throughout the Province of Ontario. Its authority is derived from an Act of the Provincial Legislature passed in 1906 to give effect to recommendations of earlier advisory commissions that the water powers of Ontario should be conserved and developed for the benefit of the people of the province. It now operates under the Power Commission Act (SO 1907, c. 19) passed in 1907 as an amplification of the Act of 1906 and subsequently modified from time to time (RSO 1960, c. 300, as amended). The Commission may have from three to six members, all of whom are appointed by the Lieutenant-Governor in Council. Two commissioners may be members of the Executive Council of the Province of Ontario.

The basic principle governing the financial operations of the Commission and its associated municipal utilities is that electrical service is provided at cost. The Commission interprets cost as including payments for power purchased, charges for operating and maintaining the power supply facilities, and related fixed charges. The fixed charges represent interest on debt, provisions for depreciation, allocations to reserves for contingencies and rate stabilization, and the further provision of a sinking fund reserve for retiring the Commission's capital debt. While the enterprise from its inception has been self-sustaining, the province guarantees the payment of principal and interest on all bonds issued by the Commission and held by the public. In addition, the province has materially assisted the development of agriculture by contributing under the Hydro-Electric Distribution Act toward the capital cost of extending rural distribution facilities.

The entire provincial area served is regarded for financial and administrative purposes as a unit, but there is no electrical connection between the Commission's facilities in north-western Ontario and those serving customers in the remainder of the province. Statistics are therefore presented for two operating systems, the East System and the West System; the systems respectively serve the areas east and west of a line extending north from Lake Superior to the Albany River, a line that roughly conforms with the boundary dividing Thunder Bay District from the Districts of Algoma and Cochrane. Service is provided for the most part on a co-operative basis, and predominantly for the benefit of more than 350 municipalities supplied by the Commission with power at cost.

In addition to administering the enterprise over which it has direct control, the Commission, under the Power Commission Act and the Public Utilities Act, exercises certain regulatory functions, particularly with respect to the group of municipal electrical utilities which it serves. In order to provide convenient and expeditious service in this dual function of regulation and supply, the Commission subdivides its province-wide operations into seven regions with regional offices located in seven major municipalities.

The Commission is concerned primarily with the provision of electric power by generation or purchase, and its delivery to the electrical utilities for resale in the more than 350 municipalities having cost contracts with the Commission. The Commission supplies power in bulk, though not under cost contract, to 171 direct customers, some located within the areas of the municipalities already referred to and some outside these areas. These direct customers include industrial customers whose requirements are so large or so unusual as to make service by the local municipal utilities impracticable. They also include mines, industries in unorganized territories, and certain interconnected systems, including a number of independent municipal utilities. These interconnected systems purchase power for resale either within or beyond the boundaries of the province.

In addition to these operations, which represent about 90 p.c. of its energy sales, the Commission delivers electric power to retail customers in rural areas and in a small group of about 30 municipalities served by Commission-owned local distribution facilities. A much larger part of retail service throughout the province is provided, however, by the municipal electrical utilities, who supply ultimate customers in most cities and towns, in many villages, and in certain populous township areas. The municipal electrical utilities are owned and operated by local commissions.

During 1964, the Commission's investment in fixed assets at cost increased by \$97,292,070 and at the end of the year amounted to \$2,762,234,756. Total assets after deducting accumulated depreciation were \$2,824,451,700.

In 1964 a total of 357 associated municipal electrical utilities engaged in the retail distribution of electricity purchased power from the Commission. The total assets of these utilities, after deducting accumulated depreciation, amounted to \$861,265,706, of which \$354,153,351 represented the equity acquired in the Commission's systems by the municipal utilities operating under cost contracts.

The Commission's power development program as at Dec. 31, 1964 is given in Table 14 and is also outlined at pp. 653-654.

¹ Dependable peak capacity—the amount of power which resources can be expected to supply at the time of the system primary peak requirements, assuming that all units are available and that the supply of water is normal. This capacity will vary from time to time in accordance with changing conditions. The capacity of a source of purchased power is based on the terms of the purchase contract.

¹ Sum of the maximum 20-minute coincident peak loads (primary plus secondary) of each of the systems operated by the Commission, given in terms of net output of the sources of supply to each system for the last month of each fiscal year.

Manitoba.—Manitoba Hydro is the primary developing, generating and distributing power agency in the Province of Manitoba. The corporation came into being Apr. 1, 1961, following amalgamation of the two former provincial government utilities engaged in the generation and distribution of electric power.

Manitoba Hydro operates six hydro-electric generating stations, two thermal-electric generating stations and ten diesel-electric generating installations. The combined generating capability is 1,160,460 kw. Hydro installations account for 910,000 kw., thermal installations for 244,000 kw. and diesel installations for 6,460 kw. of the generating capability. Four of the hydro stations are located on the Winnipeg River and, like the thermal installations, provide power to the southern part of the province. The fifth hydro-electric generating station, rated at 160,000 kw., is situated on the Nelson River 425 miles north of Winnipeg and supplies power to The International Nickel Company of Canada, Limited development and the townsite at Thompson. The sixth hydro-electric installation is the newly completed 330,000-kw. Grand Rapids Generating Station located on the Saskatchewan River. This station is connected electrically with southern Manitoba. Diesel installations are used to provide power in isolated northern communities.

In serving its 211,470 urban, rural, commercial and industrial customers, the corporation maintains some 35,090 miles of primary transmission and farm distribution lines. Approximately 98 p.c. of the total resident-occupied farms in the province are electrified and 564 cities, towns and villages are provided with power service. While Manitoba Hydro supplies power for most of the province including the cities and municipalities adjoining the city of Winnipeg and comprising part of Metropolitan Winnipeg, it does not distribute power within the corporate limits of the city although it does supply a portion of the city's power requirements.

Power plant construction in Manitoba in 1964 is outlined at p. 654.

Saskatchewan.—The Saskatchewan Power Corporation was established on Feb. 1, 1949 and operates under the provisions of the Power Corporation Act (SS 1950, c. 10, as amended). It succeeded the Saskatchewan Power Commission which had operated from Feb. 11, 1929. The original functions of the Corporation included the generation, transmission, distribution, sale and supply of hydro and steam electric energy. Since 1952, the Corporation has been authorized to produce or purchase and to transmit, distribute, sell and supply natural or manufactured gas.

In 1964, the Corporation served approximately 972 urban communities (with six or more customers) in retail sales, and served the cities of Saskatoon and Swift Current, the town of Battleford, and the hamlet of Waskesiu in bulk sales. Some bulk power was also sold to the city of Regina and to the Manitoba Hydro-Electric Board on an exchange basis. Activities of the Corporation cover the entire province with the exception of the city of Regina, which owns and operates municipal plants and a distribution system.

At the end of 1964, the Corporation served 246,389 customers, 206,047 of whom were retail customers and 40,342 of whom were located in communities supplied with power through bulk sales. The retail customers included 139,614 urban customers and 66,433 classified as rural, mainly farm, meters. During 1964, 2,208,149,680 kwh. were made available to customers, of which 2,202,592,812 kwh. were generated in Corporation plants and 5,556,868 kwh. were purchased in bulk. At the end of the year, the Corporation had invested, at cost, \$365,445,780 in electric system assets out of a total of \$509,784,039 in plant-in-service in the combined electric and natural gas systems.

During 1964, Squaw Rapids, the first hydro-electric plant within the provincial system, supplied 29.1 p.c. of the gross generation. The Corporation also owned and operated five steam generating plants at year-end—two each at Saskatoon and Estevan and one at Moose Jaw, the latter brought back into service at year-end. Steam supplied 64.4 p.c. of total system requirements, and two internal combustion gas dual fuel plants at Kindersley and Swift Current supplied 6.5 p.c. System capability in operation at the end of 1964 was assessed at 694,150 kw. with 452,000 kw. in steam plants, 201,000 kw. in

hydro and 41,150 kw. in gas turbine and internal combustion plants. At the end of 1964, the Corporation owned and operated 72,482 miles of transmission and rural lines; this figure excludes urban distribution and hi-lines.

Power plant construction in Saskatchewan in 1964 is outlined on p. 654.

18.—Growth of the Saskatchewan Power Corporation, 1955-64

¹ November 1962 figure.

Alberta.—The generation and distribution of electric power in Alberta is handled by a combination of several municipally owned urban systems and three investor-owned companies serving the greater part of the province. The regulatory authority over the investor-owned systems is the Public Utilities Board, which has jurisdiction over the distribution and sale of electricity. The Board, which controls franchises and rates, has power to hold investigation upon complaint either by a municipality or by a utility company, and following such investigation may fix just and reasonable rates. The Alberta Power Commission controls all phases of system development, including the provincial grid system.

Power plant construction in Alberta in 1964 is outlined at pp. 654-655.

British Columbia.—The British Columbia Hydro and Power Authority comprises the British Columbia Electric Company Limited and the British Columbia Power Commission carrying on business together by virtue of the Power Measures Act, 1964. The electric service of the organization includes the generation and transmission of electricity and its distribution throughout the areas of British Columbia containing more than 90 p.c. of the population of the province; the Authority also operates gas, passenger transportation and rail freight services.

Of the Authority's total electric power requirements of 8,121,490,540 kwh. for the year ended Mar. 31, 1965, 7,104,415,285 kwh. or 87.5 p.c. was produced by hydro-electric plant, 774,495,026 kwh. or 9.5 p.c. was produced by thermal plant and the remainder, amounting to 242,580,229 kwh., was purchased. Kilowatt-hours of electricity sold totalled 7,344,875,741, an amount 14.2 p.c. higher than the sales of the previous year and nearly twice as high as the average annual increase of 7.6 p.c. for the previous five-year period. All categories of customers recorded impressive increases in kilowatt-hours consumed over the previous year—residential consumption was up 10.0 p.c., general consumption increased 8.9 p.c. and large industrial consumers recorded a remarkable 26.7-p.c. advance. There was a net increase of 24,457 in the number of electric customers during the year, bringing the total to 502,843 at the year-end. Average annual consumption per residential account rose from 5,200 kwh. in 1963-64 to 5,486 kwh. in 1964-65.

Power plant additions and construction in British Columbia in 1964 are outlined at p. 655.

Northwest Territories and Yukon Territory.—The Northern Canada Power Commission, formerly Northwest Territories Power Commission, was created by Act of Parliament in 1948 to supply electric power to points in the Northwest Territories where a need developed and where power could be provided on a self-sustaining basis. By legislation passed in 1950, the Act was extended to include Yukon Territory. The Commission has authority to construct and operate power plants as required in the Territories and, subject to approval of the Governor in Council, in any other parts of Canada.

The Commission has hydro-electric power developments on the Yukon River near Whitehorse, Y.T., the Mayo River near Mayo, Y.T., and the Snare River northwest of Yellowknife, N.W.T. Diesel-electric plants are operated at Fort Simpson, Fort Smith, Fort Resolution, Fort McPherson, Aklavik and Field, B.C., and utility plants comprising power, central heat and water and sewerage services at Inuvik and Frobisher Bay, N.W.T., and at Moose Factory, Ont.

The Whitehorse Rapids power development, in service since 1958, supplies the Department of National Defence at Whitehorse, most of the power for the city of Whitehorse, and three electric steam generators for heating the Department of National Health and Welfare hospital and two Department of Citizenship and Immigration hostels. The Snare River hydro developments supply power to the mines in the Yellowknife area and, in conjunction with the Bluefish hydro-electric plant of the Consolidated Mining and Smelting Company of Canada Limited, the town of Yellowknife. The original Snare Rapids plant has been in operation since September 1948 and the Snare Falls plant, situated on the same river about 10 miles downstream from the original plant, was placed in service in November 1960. Control of the Snare Rapids and Snare Falls plants was transferred to a remote control centre located in Yellowknife in the spring of 1965. The Mayo River plant has supplied power to mining properties in the Elsa and Keno areas and to the communities of Mayo and Keno City since 1952. A hydro-electric development under construction on the Taltson River, near Fort Smith, N.W.T. will, when completed in the fall of 1965, supply the lead-zinc mining operation being developed by Pine Point Mines Ltd. located at Pine Point, N.W.T., and replace the existing diesel power supply at Fort Smith, N.W.T. Details of construction in the Territories during 1964 are outlined at p. 655.

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii of this volume.

Section 1.—Growth of Manufacturing

Subsection 1.—The Recent Manufacturing Situation

The predominant influences on the growth of Canadian manufacturing in the three years ending in 1964 were the continuation in both Canada and the important United States export market of the expansionary phase of the business cycle begun in 1961, the accompanying high rate of capital investment activity, a particularly strong domestic demand for motor vehicles and the competitive advantage gained from the lower foreign exchange value of the Canadian dollar. Other factors included a stimulus to the demand for manufactured products, mostly in 1964, from the combination of a large 1963 wheat crop and large wheat export contracts and, in 1963 and 1964, buoyant overseas markets for Canadian manufactures.

Whereas the physical volume of manufacturing production declined 0.3 p.c. in 1960, a recession year, it rose 2.5 p.c. in 1961, the first year of the expansion, and then 7.8 p.c. in 1962. A smaller increase of 5.5 p.c. in 1963 was followed in 1964 by a rise of 8.2 p.c., the largest since the beginning of the expansion. In terms of the actual dollar value of manufacturers' shipments of goods of their own manufacture, annual Census of Manufactures data show an increase of 2.0 p.c. in 1960, followed by 4.1 p.c. in 1961, 9.9 p.c. in 1962 and 8.3 p.c. in 1963. The monthly survey of manufacturers' shipments* shows a rise of 9.8 p.c. in 1964, suggesting an annual figure of upwards of \$31,600,000,000. The number of employees in manufacturing rose 4.8 p.c. in 1964† and in that year capital expenditures by manufacturers showed one of the sharpest increases in the post World War II period. The latter subject is discussed in Chapter XVII on Capital Expenditures, Construction and Housing.

The rising costs usually associated with a higher level of over-all economic activity and the effects of devaluation upon prices of imported components and, perhaps, upon competitive pressures, led to some acceleration of price increases in manufacturing. The unweighted average of selling price indexes for domestic manufacturing industries rose only 0.7 p.c. in 1960 and 0.3 p.c. in 1961 but increased 1.0 p.c. in 1962, 2.2 p.c. in 1963 and 1.4 p.c. in 1964. As is usual, the upswing in activity contributed to improvement in the rate of growth of output per person employed and per man-hours in manufacturing, followed by evidence of some lessening of the rate of productivity growth as more of the slack was removed. Statistics on output per person employed and per man-hours and a discussion of these concepts are given in Section 3 of Chapter XXIV on Trends in Economic Aggregates.

* DBS publication *Inventories, Shipments and Orders in Manufacturing Industries* (Catalogue No. 31-001).

† DBS publication *Estimates of Employees by Province and Industry* (Catalogue No. 72-008).

The monthly surveys of shipments and employment provide a provisional picture of manufacturing in 1964 but the 1963 annual Census of Manufactures, figures for which are given in the tables of this Chapter, presents a comprehensive account of the manufacturing industries in that year, although these figures are also subject to minor revision. They show that the value of shipments of goods of own manufacture rose to a record level of \$28,942,666,000, an increase of 8.3 p.c. over 1962. The number of production and related workers employed rose to 1,003,915, an increase of 3.1 p.c., and the production man-hours paid rose 3.3 p.c. Wages paid to these workers amounted to \$4,097,540,000, an increase of 6.9 p.c. over 1962. The cost of fuel and electricity, at \$563,479,000, was up 4.5 p.c., the cost of materials and supplies used, at \$15,970,859,000, increased 9.4 p.c., and value added by manufacture amounted to \$12,568,168,000, an increase of 7.0 p.c.

The total number of employees of the manufacturing industry (excluding working owners and partners but including employees engaged in non-manufacturing activities) was 1,427,143 in 1963, higher by 2.6 p.c. than in the previous year, and their wages and salaries came to \$6,505,287,000, an advance of 6.6 p.c. The value added on a "total activity" basis (i.e., including non-manufacturing activity) was \$13,173,433,000, an increase of 7.1 p.c.

Among the industry groups, the transportation equipment industries showed the largest proportionate gain in 1963. Stimulated by the high level of consumer demand for cars, the value of factory shipments for these industries reached \$2,830,176,000, a gain of 20.8 p.c. over 1962; this was the third largest industry group. The food and beverage industries, which was the largest group in terms of shipments, had shipments of \$5,714,198,000, an increase of 6.3 p.c. over the previous year. Other industry groups having shipments of \$1,000,000,000 or more were, with percentage increases in parentheses: primary metal industries, \$3,101,478,000 (4.5 p.c.); paper and allied industries, \$2,452,437,000 (5.1 p.c.); metal fabricating industries, \$1,877,158,000 (9.0 p.c.); chemical and chemical products industries, \$1,644,786,000 (6.6 p.c.); electrical products industries, \$1,545,046,000 (11.2 p.c.); petroleum and coal products industries, \$1,365,647,000 (5.5 p.c.); wood industries, \$1,276,848,000 (10.6 p.c.); and textile industries, \$1,099,838,000 (12.0 p.c.).

Among the provinces, the largest proportionate increase in 1963 was shown by New Brunswick, which recorded a 13.8-p.c. advance. Ontario was second with 9.6 p.c., followed closely by British Columbia with 8.6 p.c. Gains for the other provinces were below the national average of 8.3 p.c. They were: Newfoundland, 7.9 p.c.; Nova Scotia, 7.6 p.c.; Manitoba, 6.9 p.c.; Alberta, 6.8 p.c.; Quebec, 6.4 p.c.; Saskatchewan, 5.1 p.c.; and Prince Edward Island, 1.4 p.c.

The indexes of manufacturing production indicate that the 1964 increase in the physical volume of manufacturing output was greatest in the durable manufactures industries, which rose 9.6 p.c. over 1963. Non-durable manufactures industries increased their physical volume by 7.1 p.c. Among the major industry groups, the non-metallic mineral products industries showed the largest percentage increase in volume; their output rose 14.2 p.c., reflecting a heavy demand for portland cement and other construction materials as a result of the rise in capital investment activity. The iron and steel products industries, also affected by the high investment activity and by strong demand for consumer durables, registered a 12.7-p.c. increase, the second largest percentage advance. Rubber products followed with an increase of 12.2 p.c. and chemical products with one of 12.0 p.c. The marked increase in factory shipments of motor vehicles was reflected in a 9.4-p.c. gain for the transportation equipment industry (as well as in the gain recorded by rubber products) but the transportation group gain also reflected advances in aircraft and railway rolling-stock production.

Manufacturing accounted for 26.3 p.c. of the gross domestic product at factor cost in 1964 and also accounted for 28.5 p.c. of wages, salaries and supplementary income and the same percentage of investment income, according to statistics entering into the gross domestic product.

Subsection 2.—Historical and Current Statistics of Manufacturing

Statistics on manufacturing in Canada have been collected since 1870, originally in connection with the decennial or quinquennial censuses for the period 1870 to 1915 and, since 1917, through the annual Census of Manufactures. Although every effort has been made to maintain comparability in the statistics since 1917, as shown in Table 1, changes in coverage of industries, type of data collected and the method of its treatment have inevitably introduced discontinuities or lack of comparability in certain components. One such major change in concept occurred in 1952 when the gross value of products was replaced by the value of factory shipments. More recently, the introduction of the revised standard industrial classification in 1960 and the new establishment concept in 1961 led to a break in continuity with previous years. An indication of the effects of these revisions in classification and concept is given in Table 1 where statistics for the 1957-59 period are given on both the 1948 standard industrial classification and manufacturing activity concept and the revised (1960) standard industrial classification and new establishment concept. Under the latter concept, a manufacturing establishment (i.e., one whose major activity is manufacturing) is the smallest reporting unit capable of reporting all of the following: materials and supplies used, goods purchased for resale as such, fuel and power consumed, number of employees and their pay, inventories, and shipments or sales.

The introduction of the total activity concept in 1962 and its application to 1961 data produced a considerable amount of data on non-manufacturing activities of manufacturing industries and has resulted in the transfer of statistics on some items, such as office and administrative workers and working owners and partners, from manufacturing to total activity. Table 2 sets out summary statistics for manufacturing activity and total activity for 1961, 1962 and 1963. It should be noted that the 1961 data in Table 2 are not directly comparable with those for the same year in Table 1 and that 1963 data were preliminary at the time of publication.

1.—Summary Statistics of Manufactures, 1917-61

NOTE.—Figures for intervening years from 1918 to 1949, not included in this table, are given in the 1962 Year Book, p. 616. Statistics of manufacturing from 1870 have been published but between that year and 1917 figures are not on a basis comparable to the series given below; statistics for significant years appear in the 1943-44 Year Book, p. 363. Figures of the non-ferrous metal smelting industries were first included with manufactures in 1925.

¹ Includes working owners and partners. ² For 1924-51, inclusive, the value added by manufacture is computed by subtracting cost of fuel, electricity and materials from gross value of products; for 1952 and 1953 the deduction is made from value of factory shipments and for 1954 and subsequent years from the calculated value of production. Figures prior to 1924 are not comparable because statistics for cost of electricity are not available. ³ Prior to 1952, gross value of products. ⁴ A change in the method of computing the number of employees in the years 1925 to 1930, inclusive, increased the number somewhat over that which the method otherwise used would have given. In 1931, however, the method in force prior to 1925 was re-adopted. ⁵ Newfoundland is included from 1949 but figures for the fish processing industry for 1949 and 1950 are not available for that province and are not included.

2.—Summary Statistics of Manufactures, 1961-63

NOTE.—Based on the revised standard industrial classification and new establishment and total activity concepts. Figures in this table include poultry processors, book publishers, electroplating establishments, dental laboratories, and prescription branches in the ophthalmic goods manufactures industry, not included in Table 1.

1963												

¹ Conceptually identical to previous years.² Cannot be reported separately for manufacturing and non-manufacturing activities but related substantially to manu- facturing activity.³ Included with administrative and office employees in the manufacturing series published in former years.⁴ Value of total shipments and other⁵ Value of total shipments and other operational revenue less total cost of materials, supplies, fuels used and purchases of products and materials for re-sale in the same condition; all adjusted for inventory changes where required.

Volume of Manufacturing Production

Since manufacturers' selling prices change and since production from other industries (and countries) is embodied in Canadian factory shipments, a measure of fluctuations and long-term growth in the physical volume of production within the Canadian manufacturing industry itself is desirable. Such a measure of volume, or "real" domestic production, is provided by the index of manufacturing production. This index differs from current statistics on the gross value of factory output in two important ways besides the exclusion of price change: it uses the 1948 rather than the 1960 standard industrial classification and it is designed to represent net production. Although a revision is under way, because of their central importance to the study of Canadian manufacturing, the unrevised indexes are shown for selected years in Table 4.

4.—Indexes of Volume of Manufacturing Production, for Major Industry Groups, 1946-64

(Ranked according to 1964 percentage increase over 1949)

(1949=100)

Industry Group	1946	1954	1959	1960	1961	1962	1963	1964
Products of petroleum and coal.....	74.3	165.0	241.5	250.6	258.8	272.8	296.0	304.2

Transportation equipment ¹	80.6	137.3	131.5	130.0	129.8	156.7	181.4	198.5
Iron and steel products ¹	80.8	106.2	147.2	137.3	139.4	152.1	161.8	182.4
Paper products.....	81.0	124.1	144.7	148.4	153.4	159.1	164.3	179.0
Food and beverage products.....	98.0	120.6	147.6	150.2	154.2	158.9	162.1	174.1
Textile products.....	88.7	94.3	124.4	122.5	134.6	146.6	159.5	172.2
Wood products ¹	86.8	124.2	136.6	136.0	139.6	151.5	159.0	165.1
Printing, publishing and allied industries.....	76.9	121.6	143.2	146.5	148.2	154.0	156.7	164.6
Non-ferrous metal products ¹	81.8	117.0	134.7	148.3	147.6	148.9	148.8	162.0
Clothing products.....	95.3	108.9	113.1	107.9	107.1	111.0	137.0 ²	135.8 ²
Leather products.....	124.0	100.2	120.3	111.8	123.8	126.7	127.0	130.9
Non-durable manufactures.....	89.8	121.2	150.1	151.8	157.0	164.8	172.2	184.5
Durable manufactures.....	79.9	124.8	149.5	146.4	148.4	165.0	175.9	192.7
All Manufactures.....	85.2	122.9	149.8	149.3	153.0	164.9	173.9	188.2

¹ Durable manufactures; other groups are non-durable.

² Not comparable with earlier years.

Industry Selling Price Indexes

The most comprehensive estimate of price changes in manufacturing is an unweighted average of industry selling price indexes. There are currently 102 such indexes, each based on prices of a representative "basket" of products of a particular manufacturing industry. (They thus relate to gross rather than net production, as defined above in connection with the volume of manufacturing production.) Although the average of these is not a scientific, weighted measure of price changes in manufacturing, it appears to give a reasonably good over-all indication of the direction and extent of price movements. The unweighted annual average of industry selling price indexes (1956=100) is as follows for years for which they have been issued:—

1956.....	100.0	1959.....	102.4	1962.....	104.4
1957.....	101.6	1960.....	103.1	1963.....	106.7
1958.....	101.4	1961.....	103.4	1964.....	108.2

Section 2.—Provincial Distribution of Manufacturing

Manufacturing activity is heavily concentrated in Central Canada, Ontario and Quebec together accounting for 80.6 p.c. of total value added by manufacture in Canada in 1963—Ontario for 52.0 p.c. and Quebec for 28.6 p.c. British Columbia accounted for 8.4 p.c.; the Prairie Provinces for 7.4 p.c. and the Atlantic Provinces for 3.6 p.c.

5.—Summary Statistics of Manufactures, by Province, 1962 and 1963

NOTE.—Based on the revised standard industrial classification and new establishment and total activity concepts.

¹ Conceptually identical to previous years.
² Cannot be reported separately for manufacturing and non-manufacturing activities but related substantially to manufacturing activity.
³ Included with administrative and office employees in the manufacturing series published in former years.
⁴ Includes production and related workers, administrative and office employees, sales, distribution and materials for re-sale in the same condition; all adjusted for inventory changes where required.
⁵ Value of total shipments and other operational revenue less total cost of materials, supplies, fuels used and purchases of products and materials for re-sale in the same condition; all adjusted for inventory changes where required.
⁶ Confidential under the secrecy provisions of the Statistics Act; included in "Groups for which data cannot be shown."
⁷ Pulp and paper mills only; publication of these figures was authorized by the firms concerned.
⁸ Confidential; included in provincial total.
⁹ Petroleum refineries only; data for two establishments in "Other petroleum and coal products industries", included in "Groups for which data cannot be shown."
¹⁰ Petroleum refineries only; data for three establishments in "Other petroleum and coal products industries", included in "Groups for which data cannot be shown."

Among the provinces, New Brunswick showed the largest proportionate increase in value of shipments of own manufacture in 1963 over 1962; the dollar value for that province was \$456,435,000, representing 1.6 p.c. of the total for Canada and a 13.8-p.c. increase over the previous year. As in other years, Ontario's share of total shipments was the largest, in 1963 amounting to \$14,627,559,000 or 50.5 p.c. of Canada total; the increase of 9.6 p.c. over 1962 was the second largest among the provinces. Quebec recorded the second largest shipments, which amounted to \$8,447,903,000, representing 29.2 p.c. of the total and a 6.4-p.c. increase over 1962. Figures for the other provinces were: British Columbia, with shipments of \$2,383,242,000 or 8.2 p.c. of the total and an increase of 8.6 p.c. over 1962; Alberta with \$1,085,963,000 or 3.8 p.c. of the total and a 6.8-p.c. increase; Manitoba with \$893,893,000 or 3.1 p.c. of the total and a 6.9-p.c. increase; Nova Scotia with \$459,226,000 or 1.6 p.c. of the total and a 7.6-p.c. increase; Saskatchewan with \$394,208,000 or 1.4 p.c. of the total and a 5.1-p.c. increase; Newfoundland with \$155,275,000 or 0.5 p.c. of the total and a 7.9-p.c. increase; and Prince Edward Island with \$35,625,000 or 0.1 p.c. of the total and a 1.4-p.c. increase.

The number of employees was higher in 1963 than in 1962 in all provinces except Nova Scotia; increases ranged from 4.1 p.c. in Ontario to 0.6 p.c. in Quebec. In Nova Scotia the decrease was 2.6 p.c., with all groups except textiles, knitting mills, printing, publishing and allied industries, petroleum and coal products and miscellaneous manufacturing industries showing declines.

Section 3.—Size of Manufacturing Establishments Based on Employment and Shipments

The size of manufacturing establishments may be measured in different ways for different purposes. The value of annual shipments provides an interesting basis for comparing the importance of large and small establishments in a particular year, although price changes reduce the value of such comparisons between different years. The number of employees is useful for many purposes, although its significance varies from industry to industry and between widely separated years with varying use of capital equipment, different production processes and the like. Factors tending to change the size of manufacturing establishments over the years have conflicting effects. Automation, for instance, reduces the employment required for a given production volume in an establishment but may increase establishment size in an industry if heavy capital investment requirements make larger production units more economical or if lower production costs expand the market. The long-term growth of the market favours the growth of establishment size in many industries but, at the same time, it may make room for smaller establishments. In addition, developments in the sphere of marketing may affect the size pattern of production units in an industry through their impact on the fortunes of particular companies. Growth of a new or existing industry characterized by large or small establishments will increase the importance of establishments of that size in Canadian manufacturing as a whole; similarly, a differing "industry mix" affects comparisons among provinces. Introduction in 1961 of the new concept of the establishment and of the new standard industrial classification means that size breakdowns for 1961 and 1962 are not directly comparable with those for earlier years. These changes in technical definitions (described in the 1965 Year Book, pp. 655-656) reduced the number of very small establishments considerably but did not alter significantly the pattern of percentages of employment and shipments accounted for by different size classes.

Size Based on Total Employed.—Establishments with total employment of 200 or more accounted for 49.5 p.c. of all wage and salary earners in the manufacturing industries in 1962. The 112 establishments with employment of 1,000 or more accounted for 17.3 p.c. of the wage and salary earners; 60 of these were in Ontario, 35 in Quebec, 11 in Western Canada and six in the Atlantic Provinces. (Working owners and partners are included in employment in defining establishment size.)

¹ Includes working owners and partners.

Size Based on Shipments.—There were 890 manufacturing establishments in 1962 with shipments of goods of own manufacture of \$5,000,000 or more. Of these, Ontario had

438 or 49 p.c., Quebec had 271, and the Atlantic Provinces had 27—about one tenth of the Quebec number; the Prairie Provinces with 73 and British Columbia with 81 accounted for about 8 p.c. and 9 p.c., respectively, of the national total.

Section 4.—Federal Assistance to Manufacturing

The federal Department of Industry has, since it was established in 1963, rendered assistance to industry, provincial governments, trade associations and other groups which have approached the Department regarding a wide variety of industrial subjects. A number of new programs have been developed to foster the growth of manufacturing in Canada.

Automotive Program.—The Canada-United States Agreement on Automotive Products, signed by Prime Minister Pearson and President Johnson on Jan. 16, 1965, provided for the removal of tariff and other impediments to trade between the two countries in motor vehicles and original equipment parts.

The basic objective of the plan is to provide a rapidly expanding market for Canadian motor vehicle and component producers. In this way production, trade, employment and efficiency will be increased to a substantial degree. In order to enable Canadian vehicle and parts producers to achieve these objectives, a number of important features were incorporated into the program. The most important of these safeguards was provided by the undertaking of Canadian motor vehicle manufacturers to expand very considerably Canadian production over a period of three and a half years. Whereas Canada has been producing some 4.0 p.c. of total North American automotive production, it has been consuming about 7.5 p.c.; as a result of the new program, Canada should be producing a substantially larger share by the time vehicles for the 1968 model year are available. Canadian exports of vehicles and parts had already increased by 95 p.c. in the first six months of 1965 over the same period the previous year and employment in the motor vehicle and parts industries had increased by 13 p.c. Since the announcement of the Canada-United States automotive agreement, there have been numerous announcements of new plants and expansions to existing plants in the Canadian automotive industries.

Adjustment Assistance for Firms in the Automotive Parts Industries.—An economic expansion of the magnitude of that at present taking place in the automotive industries was bound to result in certain transitional adjustments. The automotive program offers new large-scale opportunities to Canadian automotive parts manufacturers for expanded production, rationalization of output and reduced costs. As a result, many Canadian parts makers must engage in substantial re-equipment and expansion programs.

An Adjustment Assistance Program has been established to make loans available to those automotive products manufacturers who have a reasonable prospect of profitable operation but who otherwise would be prevented from doing so through lack of financing. These loans are made for the purpose of acquisition, construction, installation, modernization or development of facilities or machinery and for use as working capital. They carry an interest rate of 6 p.c. and are repayable over not more than 20 years for land and buildings and 10 years for other purposes.

Designated Area Program.—The Tax Incentive Program introduced Jan. 29, 1964 to foster economic development in areas of high and chronic unemployment has been replaced by a program of cash grants to new and expanding manufacturing and processing facilities as provided in the Area Development Incentives Act passed on June 30, 1965. New criteria for the designation of areas take into account not only conditions of high and chronic unemployment and slow economic growth, but now also consider the degree of under-employment as measured by low non-farm family income.

More than 250 firms indicated their intention to establish facilities in designated areas under the old program and to invest more than \$560,000,000. More than 18,500 new jobs were to be provided directly by these factories and a like number of additional jobs associated with supply and service industries. The new program embraces large regions of the country, in all 10 provinces, with 65 National Employment Service office areas and 16 counties and census divisions being designated. The new program covers approximately 16 p.c. of the labour force, compared with 7½ p.c. under the old program.

Program for the Advancement of Industrial Technology (PAIT).—In 1965, the Department initiated a Program for the Advancement of Industrial Technology to promote the application of scientific and technological advances to the development of new products and processes in Canadian industry. The basic concept of the program is to provide loans to help industry improve its technological capability. Projects which involve a genuine technical advance and which, if successful, offer good prospects for commercial exploitation are eligible for support. Assistance under the program was made available to individual firms or groups of firms that have the capabilities and facilities to undertake such development work and to manufacture and market the results. This program was designed to

improve the position of Canadian industry in relation to its foreign competitors. It is also expected that it will help to create an industrial environment attractive to Canada's best-qualified scientific, technical and managerial personnel.

Industrial Design.—The largest project in the field of industrial design launched by the Department to date is Canadian Design '67. Initiated in March 1965 in co-operation with the National Design Council, this program is intended to help Canadian industry take advantage of the excellent business opportunities generated by Canada's centennial celebrations and Expo 67. It offers Canadian designers and manufacturers greater opportunities to provide the thousands of new or unique products required to construct, furnish and equip the numerous buildings for centennial projects and for Expo 67, as well as the giftware and other souvenirs for the millions of visitors who will be in the country during 1967.

The program provides a means for identification of types and volume of products required for centennial year activities and Expo 67, so that this information can be passed on to potential Canadian designers and manufacturers to enable them to meet these needs. A reference guide of well-designed Canadian products, which have been pre-screened by independent design juries, is being compiled. This guide, in catalogue form, is circulated to buyers, architects, engineers, distributors and others and sample products taken from it are being displayed both nationally and internationally.

Defence Product-Development Assistance.—Since November 1964, new commitments totalling approximately \$20,000,000 have been made under the Defence Development Assistance Program to foster the growth of a development capability in Canadian industry in support of the Production-Sharing Program. The projects supported under the program to meet present or anticipated requirements of military services of the United States and other allied governments include: the Twin Otter Aircraft Turbinization Project at DeHavilland (Toronto); McGill University's HARP (High Altitude Research Program) (Montreal); the Vehicular Navigational Aid at Aviation Electric (Montreal); Battlefield Sound Ranging at Computing Devices (Ottawa); Airborne Radar Sensors at Marconi (Montreal); Aircraft Systems Trainer at Canadian Aviation Electronics (Montreal); and the OT-4 Stationary Gas Turbine Engine at Orenda (Toronto). For the year ended Mar. 31, 1966, the Government has approved a cash authorization of \$25,000,000 for this program.

Canadian Government Shipbuilding Procurement Policy.—Detailed studies carried out by the Department, and concurred in by the Interdepartmental Committee on Shipbuilding, have led to the development of an improved shipbuilding procurement policy. Approved by the Cabinet on July 16, 1965, the new policy has as its objectives reduced cost to the government and increased stability and efficiency in the industry. This policy, which involves procurement on the basis of national tendering wherever possible, embodies a transitional plan of West Coast shipyards because of the special cost structure of the industry in that area.

Industrial Missions.—A number of industrial missions to the United States and Europe have been organized. The purpose of these missions is to enable Canadian business men to see at first hand the latest developments that are taking place outside Canada in their particular industries. The information gained is prepared in report form and circulated to Canadian industry so that practical application of new ideas and processes obtained may be of benefit to manufacturers as a whole.

CHAPTER XVII.—CAPITAL EXPENDITURES, CONSTRUCTION AND HOUSING*

CONSPECTUS

	PAGE		PAGE
SECTION 1. CAPITAL EXPENDITURES ON CONSTRUCTION AND ON MACHINERY AND EQUIPMENT.....	693	SECTION 3. HOUSING.....	707
SECTION 2. CONSTRUCTION STATISTICS.....	699	Subsection 1. Government Aid to House-Building.....	707
Subsection 1. Value of Construction Work Performed.....	699	Subsection 2. Housing Activities in 1964-65	711
Subsection 2. Contracts Awarded and Building Permits Issued.....	704	Subsection 3. Housing Statistics of the 1961 Census.....	715

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii of this volume.

This Chapter provides data on the capital expenditures made by all sectors of the Canadian economy on construction and on machinery and equipment, together with summaries of other available statistics for the construction industry. Section 1 shows the amounts spent by each of the various industrial or economic sectors. Section 2 brings together a number of summaries of related series on construction activity—value of work performed by type of structure, value of materials used, salaries and wages paid and numbers employed, contracts awarded and building permits issued. Government aid to house-building, construction of dwelling units and housing statistics of the 1961 Census are covered in Section 3.

Section 1.—Capital Expenditures on Construction and on Machinery and Equipment

Capital expenditures† in all sectors of the economy amounted to \$10,827,000,000 in 1964, an increase of 15.3 p.c. over the 1963 total of \$9,393,000,000. The over-all increase resulted from a 17.9-p.c. rise in the purchase of machinery and equipment and a 13.9-p.c. increase in construction expenditures. Throughout most of the period after 1946, capital outlays in Canada increased each year, reaching a peak in 1957. A four-year decline followed but a significant increase was shown in 1962 and a further strengthening occurred in 1963 and 1964. Capital spending in current dollars exceeded the 1957 total in both 1963 and 1964 but, in constant dollars, the 1957 level was not exceeded until 1964 when the capital program was recorded at 8.5 p.c. above the previous peak. These expenditures on the expansion, modernization or renewal of the nation's production facilities represented 23 p.c. of the gross national product and thus provide a significant indicator of economic activity in Canada.

* Except where otherwise noted, prepared in the Business Finance Division, Dominion Bureau of Statistics.

† Capital expenditure figures for 1963 and earlier years are final and those for 1964 are preliminary and subject to revision at a later date. Capital expenditures for 1963 and 1964, as well as intentions for 1965, appear in greater detail in the publication *Private and Public Investment in Canada, Outlook 1965*, available from the Queen's Printer (Catalogue No. 61-205).

As shown in Table 1, construction accounts for about two thirds of the total capital expenditures each year and machinery and equipment for about one third. Recently, there has been a slight upward trend in the proportion of the total represented by the purchase of machinery and equipment, which rose from 32.5 p.c. in 1961 to 35.2 p.c. in 1964. The proportion for housing construction also rose in the same period, moving upward from 17.9 p.c. to 18.7 p.c., but the non-residential construction outlays dropped from 49.6 p.c. of the total to 46.1 p.c. The latter decline accounted for the lower proportion spent on construction as a whole.

1.—Capital Expenditures on Construction and on Machinery and Equipment, in Current and Constant (1957) Dollars, 1955-64

NOTE.—Actual expenditures 1955-63; preliminary actual 1964.

1963.....	6,157	5,623	3,236	2,859	9,393	8,482	21.8	21.8
1964.....	7,011	6,188	3,816	3,270	10,827	9,458	23.0	22.7

All economic sectors with the exception of institutional services, reported increased capital outlays in 1964 over 1963. The mining industry showed an increase of \$112,000,000, reflecting an expanding program in metal mines, especially iron, and in oil and gas well development. Expenditures on new manufacturing facilities increased by \$457,000,000, mainly as a result of higher outlays for newsprint- and pulp-making facilities and increased spending by transportation equipment firms, textile companies and firms in the primary metal producing industry. Capital expenditures for utilities (including transportation, communication and storage, and public utilities such as gas, water and electricity) were up by \$306,000,000. Much of this increase resulted from additions to facilities for power generation, expansion of railway equipment, continued acceleration in the construction of the rapid-transit systems in Toronto and Montreal, and an expanded gas pipeline program. The 1964 housing activity showed continued strength with an increase of \$315,000,000 over 1963. Trade, finance and commercial services also increased expenditures but by smaller amounts. Institutional services (including hospitals, schools, universities, churches and welfare institutions) recorded a decrease of \$107,000,000 resulting mainly from completion of much of the technical school building program, although this decline was offset to some extent by an increase in construction by universities. Capital outlays by governments at all levels increased by \$186,000,000 over 1963. Government departments as defined for capital expenditure purposes include the part of government activity (excluding institutions) generally dependent on tax revenues for financial support as opposed to activities directly producing revenues on a service-rendered basis. Spending by provincial governments increased by \$143,000,000 and spending by municipal governments by \$19,000,000 but the Federal Government spent \$23,000,000 more than in the preceding year. One of the major activities of government, involving expenditures at the federal, provincial and municipal levels, is the roads, highways, bridges and streets program.

All provinces except Newfoundland and Prince Edward Island contributed to the increase in capital spending in 1964; however, the capital outlays in the two exceptions were almost the same as in 1963. An advance of 36.0 p.c. was recorded by New Brunswick and one of 30.0 p.c. by British Columbia, both reflecting, in part, new pulp-making facilities. In British Columbia, substantial increases in the electric power programs and in the construction of gas pipelines were also contributing factors. An increase exceeding the national rate of 15.3 p.c. was also registered by Quebec, which recorded a rise of 19.4 p.c. over the preceding year. Although the requirements for the 1967 World Exhibition gave a particular impetus to capital spending in that province, the large increase was attributed to higher spending on manufacturing plants, especially for pulp and paper production, markedly higher outlays for electric power plants and an increased provincial government program. In the other provinces the increases were fairly large but below the national average for 1964. The increases in Nova Scotia, Ontario, Manitoba, Saskatchewan and Alberta were 13.7 p.c., 11.9 p.c., 11.4 p.c., 8.6 p.c. and 8.6 p.c., respectively. However, it should be pointed out that sharp year-to-year fluctuations in capital outlays in any one province are often associated with changing phases of a few large projects.

2.—Summary of Capital and Repair Expenditures, by Economic Sector, 1963 and 1964

A summary of the capital expenditures in each province for the years 1963 and 1964 is given in Table 4. Such expenditures represent gross additions to the capital stocks of the province and are a reflection of economic activity in the area, although the actual production of these assets may generate major employment and income-giving effects in

other regions. For example, the spending of millions of dollars on oil refineries and pipelines in Western Canada means activity in the steel industries of Ontario as well as construction activity in the western provinces.

4.—Capital and Repair Expenditures, by Province, 1963 and 1964

Section 2.—Construction Statistics

Subsection 1.—Value of Construction Work Performed

Statistics of the construction industry are based largely on information received at the same time and from the same sources as the data on capital expenditures that appear in Section 1.* The data represent the estimated total value of all new and repair construction performed by contractors; by labour forces of utility, manufacturing, mining and logging firms; and by government departments, home-owner builders and other persons or firms not primarily engaged in the construction industry.

Table 5 shows the value of new and repair construction work performed during the ten-year period 1955-64, and Table 6 shows that contractors account for from 75 p.c. to 80 p.c. of the work performed each year.

* An explanation of sources and methods is given in DBS annual report *Construction in Canada* (Catalogue No. 64-201).

5.—Value of New and Repair Construction Work Performed, 1955-64

NOTE.—Actual expenditures 1955-63; preliminary actual 1964.

Principal statistics of the construction industry are shown by province and for contractors, utilities, governments and others in Table 8. The statistics given for Canada as a whole may be considered as relatively accurate but those for individual provinces and

by class of builder are approximations only. All estimates given for cost of materials used are based on ratios of this item to total value of work performed, derived from annual surveys of construction work and applied to the total value-of-work figures. Estimates of labour content are similarly based but, in addition, are adjusted to include working owners and partners and their withdrawals. Although the ratios were calculated in some detail by type of industry, still further refinements are required. There are also some difficulties in obtaining the precise location of projects undertaken or to be undertaken by large companies operating in a number of provinces. However, if used with these qualifications in mind, the table provides useful estimates.

8.—Labour Content, Cost of Materials and Value of Work Performed in Construction, by Province and by Employer, 1963 and 1964 with Totals for 1960-64

NOTE.—Actual expenditures 1960-63; preliminary actual 1964. Comparable figures from 1953 are given in the corresponding table of previous Year Books beginning with the 1957-58 edition.

Subsection 2.—Contracts Awarded and Building Permits Issued

In this Subsection, statistics are given of work actually in sight either as contracts awarded or as building permits. These figures are related to those of work performed during the year only so far as the work thus provided for is completed and duly reported in the capital expenditure surveys. Further, values of contracts awarded, and especially of building permits, are estimates (more often under-estimates) of work to be done.

9.—Value of Construction Contracts Awarded, 1941-64

(Source: *Southam Building Guide*)

NOTE.—Figures for the years 1926-40 are given in the corresponding table of the 1962 Year Book, p. 682.

Building Permits.—The estimated value of proposed construction is indicated by the value of building permits issued. Figures of building permits issued are collected for more than 1,400 municipalities across the country and are available for the individual municipalities, for metropolitan areas, for provinces and for economic areas in Quebec, Ontario and Manitoba.

The total value of permits issued for construction work exceeded \$3,200,000,000 for 1964, the highest figure on record and an increase of 15.7 p.c. over 1963. Residential construction was 10.4 p.c. higher, with new construction up 11.2 p.c. and repairs down

4.2 p.c. Non-residential construction increased 21.4 p.c. over 1963, with increases of 35.5 p.c. in industrial, 29.9 p.c. in commercial, and 8.8 p.c. in institutional and government construction. All provinces except Newfoundland recorded gains in 1964, the largest percentage increase being reported by British Columbia. Table 11 shows the value of building permits issued in each of 50 municipalities for 1963 and 1964.

11.—Estimated Value of Proposed Construction as Indicated by Building Permits Issued in 50 Municipalities, 1963 and 1964

NOTE.—Comparable figures for 1956-60 are given in the 1962 Year Book, p. 684, for 1961 in the 1963-64 edition, p. 692, and for 1962 in the 1965 edition, p. 698.

The indexes given in Table 14 show as far as possible the fluctuations in building costs and their effect upon construction work and employment. The relative proportions of material and wage costs in general building are difficult to determine since such proportions vary with the type of building and the centres studied.

14.—Index Numbers of Prices of Building Materials, and Wage Rates and Employment in Construction Industries, 1955-64

Section 3.—Housing*

Subsection 1.—Government Aid to House-Building

Federal Assistance.—The role of the Federal Government in housing has expanded progressively since the introduction of the first continuing statute in 1935. Although the Government originally entered the housing field in 1918, when it made money available to the provinces for re-lending to municipalities for housing purposes, the first general piece of federal housing legislation was the Dominion Housing Act passed in 1935. This was followed by the National Housing Acts of 1938 and 1944, culminating in 1954 with the present National Housing Act, defined as “an Act to promote the construction of new houses, the repair and modernization of existing houses and the improvement of housing and living conditions”. Central Mortgage and Housing Corporation (CMHC), a Crown agency incorporated by Act of Parliament in 1945, administers the National Housing Act and co-ordinates the activities of the Federal Government in housing. The Corporation has the authority and responsibility for a variety of functions affecting housing in its long-term outlook as well as in its immediate requirements. It is empowered to act as an insurer of mortgage loans, as a lender or investor of public funds, as a guarantor and as an owner of property and other assets. It also acts as a research agency in fields associated with housing and assists provinces and municipalities in many aspects of urban growth.

In general, the Government, through the successive Housing Acts, has attempted to stimulate and supplement the market for housing rather than assume direct responsibilities that rightfully belong to other levels of government or that could be borne more effectively by private enterprise. In each case the aim has been to increase the flow of mortgage money and to encourage lenders to make loans on more favourable terms to prospective home owners.

The volume of house-building in Canada since 1935 has been spectacular. Close to half of the country's present stock of approximately 5,000,000 houses have been built since the first covering legislation was enacted; about one third of these were financed in one way or another under the Housing Acts.

Under the terms of the National Housing Act, 1954 and its subsequent amendments, the Federal Government is active in many ways.

Loan Insurance.—Mortgage loans made by approved lenders may be insured for new home-ownership and rental housing and for existing dwellings in approved urban renewal areas. They are normally available from approved lenders (chartered banks and life insurance, trust and loan companies) to individual home-owner applicants, to builders constructing houses for sale or for rent, to rental investors and to special groups such as co-operative housing associations and farmers. Upon application, the borrower pays CMHC a fee of \$35 per unit to help defray expenses incurred in the examination of plans and specifications, in the determination of lending values and in compliance inspections during construction. An approved lender requires evidence that a home owner or home purchaser is providing 5 p.c. of the value of the house from his own resources. For the home owner this equity may be in the form of cash or a combination of cash, land and labour; for the home purchaser it may be in cash or labour. The regulations require that

* Prepared in the Information Division, Central Mortgage and Housing Corporation Ottawa.

gross debt service—the ratio of repayments of principal and interest plus municipal taxes to the income of the borrower—should not exceed 27 p.c., although instances involving higher ratios may be considered on their merits. The borrower pays an insurance fee which is added to the amount of the loan and is repaid over the term of the mortgage; the fee ranges from 1½ p.c. to 2½ p.c. of the loan, according to type of unit and time of mortgage advances.

For home-ownership housing, loans may be up to 95 p.c. of the first \$13,000 of lending value and 70 p.c. of the balance but may not exceed a maximum of \$18,000. Loans for rental houses may be up to 85 p.c. of the lending value, subject to the same maximum loan amount. The maximum loan available for apartment multiple-family dwellings is \$12,000 per family housing unit. The period for loan repayment is usually 25 years but may be extended to 35 years if the lender agrees. Repayments are made in equal monthly instalments which include payment of interest and loan principal. The total monthly payment includes one twelfth of the estimated municipal taxes. The interest rate is prescribed by the Governor in Council; on June 13, 1963, it was reduced from 6½ p.c. to 6¼ p.c.

Direct Loans.—CMHC may make direct loans for both home-ownership and rental housing where, in the opinion of the Corporation, loans are not available through approved lenders. Loans are made to any eligible home-owner applicant but direct loans to builders are subject to a requirement that the houses be pre-sold to satisfactory purchasers. Since 1963, loans not subject to pre-sale condition have been made available to support the Federal Government's winter-building incentive program by ensuring an adequate supply of mortgage funds. By the end of 1964, direct lending by the Corporation totalled approximately \$2,250,000,000 and in June 1965 the amount that may be advanced for this purpose out of the Consolidated Revenue Fund was increased from \$2,500,000,000 to \$3,250,000,000.

CMHC, with Government approval by Order in Council, may make loans to non-profit corporations and limited-dividend housing companies to assist in financing the construction of low-rental housing projects or in the purchase of existing buildings and their conversion into a low-rental housing project. In addition to self-contained units, developments undertaken by non-profit corporations may include hostel or dormitory accommodation for the elderly and low-income individuals. The dividends of a limited-dividend company are restricted by the terms of its charter to 5 p.c. or less of paid-up share capital. Loans may be up to a maximum of 90 p.c. of the lending value established by CMHC. The period for repayment may not exceed the useful life of the project and in any case may be for not more than 50 years. The interest rate is established by Order in Council. Plans and specifications for such projects must be approved by the Corporation as well as financing and operating arrangements.

Since December 1960, the National Housing Act has provided financial assistance for the elimination or prevention of water and soil pollution. CMHC is authorized to make a loan to a province, municipality or a municipal sewerage corporation for the construction or expansion of a central plant for the treatment and disposal of sewage wastes and the construction of one or more trunk collector sewers. The loan may not exceed two thirds of the cost of the project and the maximum repayment term is 50 years from date of completion. The interest rate is prescribed by the Governor in Council. The agreement covering the project contains a condition whereby 25 p.c. of the loan principal and 25 p.c. of the

accrued interest will be forgiven for projects completed to the satisfaction of CMHC on or before Mar. 31, 1967. Where construction is not completed before that date, 25 p.c. of the loan advanced or warrantable by construction progress at that date, plus 25 p.c. of the accrued interest on advances, may be forgiven.

Long-term loans to universities, colleges, co-operative associations and charitable corporations are authorized under the Act for the construction of university housing projects or the acquisition of existing buildings and their conversion into a university housing project. CMHC may lend up to 90 p.c. of the project cost, subject to maximum amounts as follows: houses, \$18,000; self-contained apartments, \$12,000 per unit; and hostels, \$7,000 per person accommodated. Term of the loan may not exceed 50 years. The interest rate is prescribed by the Governor in Council.

Guarantees.—CMHC is authorized to give a limited guarantee to banks or approved instalment credit agencies in return for an insurance fee paid by the borrower on loans made for additions, repairs and alterations to existing houses and apartments. A home improvement loan and the balance owing on any existing NHA home improvement loan on the property may not exceed \$4,000 for a one-family dwelling or \$4,000 for the first unit of a duplex, semi-detached or multiple-family dwelling, plus \$1,500 for each additional unit. Loans are repayable in monthly instalments, together with interest at the rate of 6 p.c., in not more than 10 years.

Public Housing.—Under the National Housing Act and complementary provincial legislation, the Federal Government and the government of a province may enter into a partnership agreement to build rental housing for families and individuals of low income or purchase and rehabilitate existing housing for this purpose. Projects may include hostel or dormitory accommodation in addition to self-contained units. The Federal Government pays up to 75 p.c. of the capital costs and the provincial government the remainder, although the latter may call upon the municipality concerned to bear a portion of the provincial share. Rents for units in federal-provincial projects are related to the tenant's family income and size of family and operating deficits are shared on the same contractual basis as the capital costs. The Federal Government and the government of a province may also enter into an agreement to provide for a land assembly project which involves the development of raw land for housing purposes. Such projects are financed in the same manner as federal-provincial housing projects.

As an alternative method of producing public housing, the CMHC is empowered to make long-term loans to a province, or to a municipality or public housing agency with the approval of the province, for the provision of housing accommodation. Projects may consist of new construction or existing buildings and include dormitory and hostel accommodation as well as self-contained family units. Loans may be up to 90 p.c. of the total cost as determined by CMHC and for a term as long as 50 years but not in excess of the useful life of the development. The maximum that may be borrowed for a house is \$18,000, for a fully serviced apartment \$12,000, and for hostels or dormitories \$7,000 for each person accommodated. The interest rate is set by the Governor in Council.

Federal grants may be made covering up to 50 p.c. of losses incurred in the operation of public housing projects, for a period of up to 50 years but not exceeding the useful life of

the project. Grants may be provided whether or not a public housing project is undertaken with a loan under the National Housing Act. Loans may be made to assist proponents of public housing projects to acquire land for future projects, the maximum loan being 90 p.c. of the cost of acquiring and servicing the property.

Urban Renewal.—Federal grants and loans are available under the Act to assist provinces and municipalities undertaking programs of urban renewal. CMHC, with Federal Government approval, may arrange with a municipality to undertake either a city-wide study or a study within a specific area for the purpose of identifying blighted areas, determining housing requirements and providing data upon which an orderly program of conservation, rehabilitation and redevelopment can be based. The federal contribution may be as much as 75 p.c. of the cost of a city-wide study and up to 50 p.c. of the cost of a limited area study. The legislation also authorizes federal contributions equal to one half of the costs of preparing an urban renewal scheme setting out proposals for urban renewal action, a similar cost-sharing arrangement for the implementation of a scheme, and loans up to two thirds of the provincial or municipal share of the cost of carrying out an urban renewal scheme. Loans may be for 15 years at an interest rate prescribed by the Governor in Council. To encourage the improvement and conservation of housing meeting minimum standards of construction, loans are available for the sale, purchase or refinancing of existing housing in urban renewal areas not designated for demolition.

CMHC Building.—The Corporation may construct and administer housing and certain other buildings on its own account and for other government departments and agencies. Its responsibilities include the provision of architectural and engineering designs, the calling of public tenders and the administration of construction contracts—including any necessary on-site surveying and engineering. On such contracts the Corporation carries out full architectural and engineering inspections.

Research.—CMHC is concerned with building technology in the formulation of standards for housing construction, in the use of suitable materials and in the development of new building techniques. The Corporation has no laboratory facilities but has direct experience of performance in the field and seeks the advice of specialists in various agencies and departments of the Federal Government in such matters. Research into the factors affecting housing is concerned with the measurement of the demand for new housing, the volume of new housing built and the supply of mortgage money for house construction. The Corporation also co-ordinates and publishes statistical information on housing. Funds provided under the National Housing Act support the activities of the Canadian Housing Design Council, the Community Planning Association of Canada and the Canadian Council on Urban and Regional Research.

Other Federal Legislation.—The Farm Credit Act, 1959 provides for federal long-term loan assistance for housing as well as for other farm purposes (see pp. 464-465); the Veterans' Land Act, 1942 provides a form of loan and grant assistance to veterans for housing and other purposes (see pp. 342-343); and the Farm Improvement Loans Act, 1944 (see pp. 462-463) provides for guarantees for intermediate- and short-term loans made by approved lending agencies to farmers for housing and other purposes. These three statutes are concerned only incidentally with housing.

Provincial Assistance.—All provinces have complementary legislation providing for joint federal-provincial housing and land assembly projects and, in addition, most provinces have enacted separate legislation with respect to housing. Details of such assistance may be secured from the provincial government departments listed in the Directory of Sources of Official Information included in Chapter XXVII, under the heading of "Housing".

Subsection 2.—Housing Activities in 1964-65

Housing production in Canada reached an unprecedented level in 1964. The 165,658 housing starts recorded represented an increase of 11.5 p.c. over the previous year's total of 148,624 and housing completions, numbering 150,963, surpassed the 1963 volume of 128,191 by 17.8 p.c. Both starts and completions exceeded the former records established in 1958. Investment in new housing in 1964 amounted to \$2,027,000,000, a gain of 18.3 p.c. over the 1963 total of \$1,713,000,000. This upward swing in housing production continued throughout the first six months of 1965; for that period starts numbered 68,510 compared with 62,269 in the same months of 1964.

During 1964 and the first half of 1965 there was a nation-wide increase in the construction of rental accommodation. In 1964, production of apartment and row dwelling units reached 79,873, forming more than 48 p.c. of the over-all starts for the year and exceeding the 1963 output of these types of dwellings by 25.6 p.c. During the first six months of 1965, row and apartment construction increased by 22.3 p.c. over the same period of 1964 and accounted for 36,585 of the 68,510 housing starts. Production of home-ownership dwellings remained relatively stable during the 1964-65 period. In 1964, starts of single, duplex and semi-detached units numbered 85,785—virtually unchanged from the 1963 total of 85,049; in the first half of 1965, 33,360 dwellings of these types were begun compared with 31,925 in the same period of 1964.

A high percentage of the starts on home-ownership dwellings was undertaken as a result of federal action to spur construction activity during the winter months. This action included the provision of direct loans to builders under the NHA and the payment of \$500 to the owner or first purchaser of winter-built houses offered through the winter house-building incentive program. Both of these incentive measures will be in force again in the winter of 1965-66.

¹ Excludes the Yukon and Northwest Territories.

Operations under the National Housing Act.—NHA mortgage loans amounting to \$729,234,000 were approved in 1964 for the construction of 58,136 dwellings, compared with loans of \$687,522,000 approved for 56,259 units in 1963. The increase in lending activity continued throughout the first half of 1965 when loans were approved for the construction of 21,733 new dwellings, 3.4 p.c. more than for the same period of 1964.

For the first time since 1959 the level of direct lending by CMHC in 1964 surpassed the volume of insured loans by approved lenders operating under the Act. Loans by the federal housing agency, involving 29,939 units, had a value of \$376,577,000 and those made available through the private lenders amounted to \$352,657,000 for 28,197 dwellings. With

the approval of loans for 14,338 units, trust companies were the largest source of funds for insured mortgage lending in 1964; lending activity by life insurance companies represented 12,261 dwellings.

The reduced volume of NHA lending by the private companies was accompanied by a marked upswing in conventional loans from these sources. This type of assistance was extended for 85,090 dwellings started during the year as against 71,983 in 1963. Much of the increase resulted from the demand for funds to support the unprecedented volume of rental construction, and important innovations in lending practices served to channel additional mortgage money into the home-ownership sector. In response to a demand for loans in excess of the limit of 66½ p.c. they were permitted to make under a first mortgage, a number of lending institutions joined with other financial firms to make combined first and second mortgage loans of 83½ p.c. on the security of owner-occupied, single-family houses and duplexes. With Parliamentary approval in March 1965 of an increase in the permissible first mortgage limit to 75 p.c., combined first and second mortgages representing 87½ p.c. of lending value became available.

As in 1963, the highest level of direct lending by CMHC was reached in the last quarter of the year because many prospective home owners postponed their building plans to take advantage of the \$500 bonus payment offered under the Federal Government's winter house-building incentive program.

Borrower and House Characteristics.—Applicants for NHA loans in 1964 had an average income of \$6,375 compared with \$6,179 in 1963. The average income of purchasers who obtained loan assistance through approved lenders operating under the Act was \$6,700 and of those who obtained direct loans from CMHC, \$6,035. The cost of the average NHA-financed house, at \$15,826, was approximately \$600 higher in 1964 than in 1963. Down payments, including any secondary financing, averaged \$2,700, slightly above the \$2,634 average for the previous year. For a large portion of borrowers, the \$500 bonus available under the federal winter house-building incentive program was applied to the down payment requirement. On the average, payments of mortgage principal and interest, together with taxes, represented 21.5 p.c. of the borrower's income, virtually unchanged from 1963. The average age of borrowers was 34.7 years and 56 p.c. of the families had one or two children. More than 71 p.c. of the borrowers were purchasing a house for the first time.

Three of every four houses constructed were bungalows, 20 p.c. were split-level dwellings and the remainder were mainly two-storey units. There was a small increase in the size of the average dwelling financed under the NHA—from 1,204 sq. feet in 1963 to 1,218 sq. feet in 1964.

Loans to Non-profit Corporations and Limited-Dividend Companies.—In 1964, 44 loans in an aggregate amount of \$12,000,000 were approved to non-profit corporations to assist in the construction of 1,861 self-contained units of low-rental housing and hostel accommodation for 266 persons. Of the total, 1,708 units were intended for occupancy by elderly people and 153 by low-income families. In 1963, 36 limited-dividend loans to non-profit housing companies and private entrepreneurs were approved for the construction of 2,094 dwellings.

Home Improvement Loans.—There was a slight decline in the volume of NHA-guaranteed bank loans for home improvement purposes in 1964. Loan approvals during the year numbered 19,800 for \$36,000,000 as against 22,024 and a value of \$36,700,000 in 1963. At the end of 1964, the outstanding debt on such loans was reported by the banks at \$72,100,000 compared with \$71,700,000 a year earlier. The Home Improvement Loan Insurance Fund, comprised of fees received from borrowers, increased by \$200,000 during the year to reach \$2,800,000 at Dec. 31, 1964.

Loans for University Housing Projects.—Loans totalling \$39,600,000 were approved in 1964 for 22 university housing projects providing accommodation for 7,344 students, a substantial increase over 1963 activity when assistance was authorized for developments housing 6,397 students. Loans approved in 1964 were distributed provincially as follows:—

<u>Province</u>	<u>Loans</u>	<u>Amount</u>	<u>Students to be Accommodated</u>
	No.	\$'000	No.
Nova Scotia.....	1	1,273	213
New Brunswick.....	2	1,324	220
Quebec.....	10	22,494	4,312
Ontario.....	8	15,770	2,499
Manitoba.....	1	640	100

From December 1960, when university housing loans were first authorized, to December 1964, 95 loans totalling \$110,300,000 were approved for the construction of residences for 22,374 students. In June 1965, the statutory limit that may be advanced for such loans was increased from \$150,000,000 to \$200,000,000.

Loans for Municipal Sewage-Treatment Projects.—During 1964, 220 loans amounting to \$26,200,000 were authorized to assist 146 municipalities to undertake sewage-treatment projects, distributed provincially as follows:—

<u>Province</u>	<u>Loans</u>	<u>Amount</u>	<u>Province</u>	<u>Loans</u>	<u>Amount</u>
	No.	\$'000		No.	\$'000
Newfoundland.....	3	91	Ontario.....	65	13,877
Prince Edward Island.....	1	10	Manitoba.....	16	1,430
Nova Scotia.....	1	20	Saskatchewan.....	49	922
New Brunswick.....	6	231	Alberta.....	16	1,647
Quebec.....	45	5,990	British Columbia.....	18	1,947

From December 1960, when the Act was amended to provide assistance for sewage-treatment projects, to December 1964, 752 loans totalling \$144,900,000 were approved to 540 municipalities.

Mortgage Marketing.—Sales of NHA-insured mortgages amounted to \$150,200,000 in 1964 as compared with a 1963 amount of \$129,100,000. The 1964 total included \$75,300,000 in sales through three mortgage auctions held by CMHC to promote the development of a secondary mortgage market. From June 1961, when the first mortgage auction was held by the Corporation to the end of December 1964, sales by CMHC to members of the Investment Dealers' Association of Canada, NHA-approved lenders and their approved correspondents totalled \$227,800,000. Such sales are subject to the condition that the mortgages be resold or used as collateral for securities backed by NHA mortgages.

Urban Renewal.—Federal assistance for urban renewal increased to \$10,517,000 in 1964 as municipalities took advantage of broadened financial aid authorized by amendments to the NHA passed by Parliament in June. Assistance for this purpose in 1963 was \$3,700,000.

Activity in 1964 included a net contribution of \$4,000,000 to the City of Vancouver to assist in the acquisition and clearance of some 25 acres of the 70-acre Alexandra Park renewal area in the downtown region; the over-all project involves the clearance of a central block of 16 acres and of several isolated blocks throughout the area. The City of Vancouver obtained a net contribution of \$2,000,000 to acquire and clear 28.5 acres of land in three areas in the east end of the city and Hamilton obtained \$4,400,000 to acquire and clear 30 acres and undertake an extensive municipal works and services program in a 270-acre renewal area near its harbour. An amount of \$117,000 was approved for Kingston to acquire and clear some 16 acres of land in the Rideau Heights area of the city.

Grants totalling \$66,785 were authorized to assist the municipalities of Dartmouth and Glace Bay in Nova Scotia, Eastview and Preston in Ontario and Prince Albert in Saskatchewan to undertake studies of local housing conditions. Also, contributions of \$137,000 to Hamilton and \$56,500 to Vancouver were approved for the preparation of urban renewal schemes.

Public Housing.—Approval was given during 1964 for the development under federal-provincial partnership arrangements of public housing projects in Halifax, Hamilton, Oshawa, Swift Current and Vancouver. These projects will provide a total of 790 dwelling units for low-income families and elderly persons. Since the initial project was authorized in 1950, public housing developments comprising 12,674 units have been approved. One loan-assisted public housing project—first authorized by the June 1964 amendments to the NHA—was approved; CMHC was authorized to make a loan and enter into a subsidy agreement with the Ontario Housing Corporation for the development of a 40-unit project for senior citizens in Hamilton.

Land Assembly.—Two land assembly projects were approved under federal-provincial arrangements in 1964. The developments, located at Swift Current, Sask., and Wawa, Ont., will provide a total of 185 serviced building lots. From the inception of the program in 1948 to the end of 1964, a total of 18,296 lots had been authorized for development and 10,985 had been sold.

Subsection 3.—Housing Statistics of the 1961 Census*

The tremendous upsurge in building construction in the 1951-61 decade is reflected in the 1961 Housing Census results† which recorded 1,145,198 more occupied dwellings in 1961 than in 1951, the total for Canada in the later year being 4,554,493. The rate of increase in occupied dwellings of 33.6 p.c. exceeded the population increase of 30.2 p.c. in the same period.

Table 18 gives a summary of housing characteristics for Canada in 1951 and 1961. In this period both owned and rented dwellings increased by about one third and single detached dwellings and apartments and flats increased at about the same proportionate rate. The median value of homes was \$11,021 in 1961 and the median monthly cash rent \$62. Almost two out of five dwellings were constructed in the postwar period, a fact reflected in part in the proportion of dwellings in need of repair, which dropped from 13.4 p.c. in 1951 to 5.6 p.c. in 1961.

* More detailed information may be found in Vol. II (Part 2) of the 1961 Census (Catalogue Nos. 93-523 to 93-535).

† Based on a 20-p.c. sample of occupied dwellings across Canada. A dwelling, for census purposes, is a structurally separate set of living quarters with a private entrance either from outside the building or from a common hall or stairway inside. The entrance must not be through anyone else's living quarters.

¹ Exclusive of the Yukon and Northwest Territories.² Dwellings in which the number of persons

exceeded the number of rooms.

³ Figures relate to owner-occupied, single detached, non-farm dwellings

only.

⁴ Figures relate to non-farm dwellings only.

Among the provinces, Alberta had the largest proportionate gain over 1951, recording an increase of 39.5 p.c. and 99,059 dwellings; Ontario was first numerically with 459,625 more dwellings in 1961 than in 1951, an increase of 38.9 p.c. Saskatchewan had the largest proportion of the single detached type in 1961, 85.7 p.c. of its occupied dwellings being in that category. On the other hand, 49 p.c. of Quebec's dwellings were apartments or flats, the highest among the provinces. The largest homes were in Prince Edward Island where they had an average of 6.4 rooms and 3.3 bedrooms. The smallest were in British Columbia and the Prairie Provinces where they averaged 4.9 rooms and 2.4 bedrooms (2.5 bedrooms in Saskatchewan). Crowded homes (those in which the number of persons exceeded the number of rooms) were most in evidence in Newfoundland where about three out of ten were thus classified. The proportion of such homes was lowest in Ontario at 11.8 p.c.

Among the metropolitan areas, Vancouver, Victoria and Windsor had the largest proportion of single detached type dwellings in 1961, with 75.9 p.c. of their homes in that category; 69.8 p.c. of Montreal's dwellings were apartments or flats, the highest proportion for this group. Largest homes, on the average, were found in St. John's, Nfld., where they averaged 5.7 rooms and 3.0 bedrooms, and the smallest were in Sudbury, Ont., where they had an average of 4.6 rooms and 2.3 bedrooms.

Tables showing housing characteristics and tenure of occupied dwellings, by province and metropolitan area, are given in the 1965 Year Book at pp. 710-711.

Section 1.—The Government in Relation to Labour

Subsection 1.—The Federal Department of Labour and Federal Labour Legislation

The Department of Labour.—The federal Department of Labour was established in 1900 under the Conciliation Act which provided machinery to aid in preventing and settling labour disputes and required the Department to collect, compile and publish statistical and other relevant information. The Department also assumed the administration of the Fair Wages Policy adopted in the same year for the protection of workmen employed in the execution of Federal Government contracts and on works aided by grants from public funds. Since that time the Department has been charged with the administration of new legislation and has taken on new functions. Its work today falls very broadly into two main areas—industrial relations and manpower supply.

The legislation it administers in the industrial relations area applies to employers, workers and trade unions under federal jurisdiction. The Department is responsible for conciliation procedures in industrial disputes, the investigation of complaints of unfair labour practices, refusals to bargain and violations of legislation, the processing of applications for the certification and decertification of trade unions and the conducting of representation votes. It determines wage rates and hours of work in Federal Government contracts for construction or supplies, and promotes joint labour-management consultation. It also administers legislation to prevent discrimination in employment based on race, religion, colour or national origin and to provide for equal pay for female employees. In 1965, the Canada Labour (Standards) Code became law. The Code establishes minimum standards of wages, hours of work, vacations with pay and paid general holidays in industries under federal jurisdiction.

* Except as otherwise noted, this Chapter has been revised under the direction of the Deputy Minister of the Department of Labour, Ottawa.

In the manpower supply area, the Department has been increasingly concerned with promoting the best use of all available manpower resources. Under federal-provincial agreements, assistance is provided to the provinces for the construction and equipping of technical and vocational schools and for the operation of a variety of training programs, including training for the unemployed in provincially organized courses.* The Department is responsible for the co-ordination of the national program for the vocational rehabilitation of the civilian disabled, and provides financial assistance, also under federal-provincial agreements, to provincial rehabilitation programs.† The Manpower Consultative Service went into operation in 1964 to assist management and unions in carrying on advance planning to meet the manpower effect of automation and other technical changes and so to reduce hardship and unemployment. The Manpower Mobility Program, introduced in 1965, offers financial help to unemployed workers who wish to move with their families to places where jobs are available. Also in 1965, the National Employment Service, formerly operated by the Unemployment Insurance Commission, was transferred to the Department of Labour (see p. 749).

To stimulate winter activity and so increase winter employment, the Department organizes, in co-operation with the National Employment Service, the annual nation-wide "Do It Now" winter employment campaign to persuade home and business owners to plan inside renovation and repair work for the cold months. It is also responsible for the municipal winter works incentive program, through which the Federal Government contributes toward winter works projects undertaken by municipalities. As a further stimulus to winter employment, a winter house-building incentive program was introduced in 1963-64 (see p. 711) and has since been continued.

Research, involving regular surveys and analyses of economic and social trends affecting the labour force, is an important part of the Department's work. It studies wages and working conditions, employment and unemployment, particular occupations, the training and utilization of manpower, union organization and collective bargaining.

Through the Women's Bureau and the Division on Older Workers, it investigates the problems of women and of older persons in the labour force. It assists in the movement of farm workers between provinces and between Canada and the United States, under federal-provincial agreements. It operates a plan of workmen's compensation for seamen on Canadian ships, and arranges workmen's compensation for Federal Government employees.

The Department publishes the monthly *Labour Gazette*, maintains records of labour legislation in the provinces and in other countries and operates a labour lending library. It provides liaison between the International Labour Organization and the federal and provincial governments, and is responsible for the sale and administration of Canadian Government annuities.

Federal Labour Legislation.—Fair Wages Policy.—The Fair Wages Policy applying to all Federal Government contracts was first set forth in a Resolution of the House of Commons (1900) and later incorporated in an Order in Council and amended from time to time. Wages and hours on contracts for construction are now regulated by the Fair Wages and Hours of Labour Act (RSC 1952, c. 108) and Order in Council PC 1954-2029 of Dec. 22, 1954. Hours of work on construction contracts are limited to eight per day and 44 per week, except in an emergency approved by the Minister or in special circumstances where exemption is granted by Order in Council; wages to be paid are those current for the type of work in the district or, if there are no current rates, fair and reasonable rates as determined by the Minister of Labour.

Wages and hours of work on contracts for equipment and supplies are also regulated by Order in Council PC 1954-2029. The hours of such work must be those fixed by the custom of the trade in the district where the work is performed, or fair and reasonable

* See Education Chapter, pp. 352-354.

† See Public Health, Welfare and Social Security Chapter, pp. 328-329.

hours. The wages must be current or fair and reasonable but in no event shall they be less than those established by statute or regulation of the province in which the work is being performed. This Order in Council contains a clause prohibiting discrimination against any person in matters of employment because of that person's race, national origin, colour or religion, or because he has made a complaint or given information with respect to such alleged discrimination.

*Government Prevailing Rate Employees.**—Many departments and agencies of government employ non-office workers in public buildings, defence establishments, parks and forests, experimental farms, canal operation, airports and government vessels, survey parties, special projects, etc. Such positions are exempt from the operations of the Civil Service Act and rates of pay are fixed by the Treasury Board in consultation with the Department of Labour on the basis of prevailing private industry rates for comparable work in the appropriate area. Data used in the determination of these pay rates are secured from wage surveys made by Industrial Relations Officers of the Department of Labour, from wage research conducted by the Economics and Research Branch, and from collective agreements and wage rates established under the legislation of some provinces.

The Labour Standards Branch also recommends rates of pay for 4,000 commissionaires employed by various government departments and agencies throughout Canada, provides wage data to assist certain Crown corporations in the preparation of their wage schedules, and gives assistance in the establishment of class titles, job descriptions and the application of job evaluation techniques.

Three sets of comprehensive Regulations have been established by the Treasury Board governing hours of work, overtime, vacations, statutory holidays, sick leave, pensions, etc., for (1) prevailing rate workers generally employed, (2) ships' officers and (3) ships' crews.

The Industrial Relations and Disputes Investigation Act.—This legislation came into effect by proclamation on Sept. 1, 1948, revoking the Wartime Labour Relations Regulations in effect since March 1944 and repealing the Industrial Disputes Investigation Act which had been in force from 1907 until suspended by the Wartime Regulations in 1944. The Act protects proceedings commenced and decisions, orders and certifications made under the wartime legislation in so far as these involve services authorized by the Act.

The Act applies only to industries within federal jurisdiction, viz., navigation, shipping, interprovincial railways, canals, telegraphs, steamship lines and ferries, both international and interprovincial, aerodromes and air transportation, radio broadcasting stations, and works declared by Parliament to be for the general advantage of Canada or of two or more provinces. However, the Act provides that provincial authorities if they so desire may enact similar legislation for application to employees within provincial jurisdiction and make mutually satisfactory arrangements with the Federal Government for the administration of such legislation by the federal authorities.

In general, the Act in its important features provides that employees and employers shall have the right to organize and bargain collectively and that trade unions may be certified as bargaining agents for employee groups. Trade unions and employers are required, upon notice, to bargain collectively in good faith. The Act provides for invoking collective bargaining negotiations and for the mediation of conciliation officers and conciliation boards in reaching collective agreements. Employees may change bargaining agents at times under conditions specified in the Act, which also prescribes conditions affecting the duration and renewal of collective agreements. Collective agreements are required to contain provision for the arbitration of disputes concerning the meaning or violation of such agreements and where such provision is lacking application may be made for its establishment. The Act prohibits unfair labour practices, i.e., the interference with or domination of trade unions by employers or interference, discrimination and coercion in trade union activity.

* Statistics on numbers and earnings of prevailing rate and other groups of federal employees exempt from the Civil Service Act are given at pp. 146-155.

The conditions that must be observed prior to strike and lockout action are set down in the Act. Industrial inquiry commissions may be appointed to investigate industrial matters or disputes.

The Minister of Labour is charged with the administration of the Act and is directly responsible for the provisions affecting the appointment of conciliation officers, conciliation boards, industrial inquiry commissions, consent to prosecute, and complaints that the Act has been violated or that a party has failed to bargain in good faith.

The Canada Labour Relations Board administers provisions concerning the certification of bargaining agents, the writing of a procedure into a collective agreement for the final settlement of disputes concerning the meaning or violation of such agreement, and the investigation of complaints made to the Minister that a party has failed to bargain collectively.

Detailed statistics concerning activities under the Act may be found in the Annual Report of the Department of Labour. In brief, from Sept. 1, 1948 to Dec. 31, 1964, the Canada Labour Relations Board received 1,619 applications for certification, 948 of which were granted, 335 rejected, 322 withdrawn and 14 were pending at the end of the period. Of the 1,040 industrial disputes dealt with under the conciliation provisions of the Act, 912 were settled by conciliation officers and conciliation boards, 71 were not settled, 29 lapsed and 28 were pending at Dec. 31, 1964.

Labour-Management Co-operation Service.—During World War II, production committees based on the principle of joint consultation between labour and management were established in many vital industries. Since 1947 the establishment of labour-management committees in industry has been encouraged and assisted by the Labour-Management Co-operation Service, a division of the Industrial Relations Branch of the Department of Labour. There are now more than 1,909 active committees whose efforts are directed toward such objects as better understanding between management and labour, improved production efficiency, improved quality, reduction of waste, accident prevention, good housekeeping and reduction of absenteeism.

Reinstatement in Civil Employment Act.—This Act provides for the reinstatement in their civil employment of discharged members of the Armed Forces and other designated persons. It was originally passed in 1942, revised in 1946, and broadened in its application in 1954.

Canada Fair Employment Practices Act.—This Act, which came into effect on July 1, 1953, prohibits discrimination in employment based on race, colour, religion or national origin. It applies only to industries within federal jurisdiction—those covered by the Industrial Relations and Disputes Investigation Act (see p. 719). This law prohibits acts of discrimination by employers; discrimination by trade unions in regard to membership or employment; the use by employers of employment agencies that practise discrimination; and the use of advertisements or inquiries in connection with employment that express, directly or indirectly, any limitation, specification or preference as to race, colour, religion or national origin.

Female Employees Equal Pay Act.—This Act came into effect on Oct. 1, 1956 and applies to employers and employees engaged in works, undertakings or businesses coming within federal jurisdiction. The Act, in its principal provision, prohibits an employer from employing a female for any work at a rate of pay that is less than the rate at which a male is employed by that employer for identical or substantially identical work.

Canada Labour (Standards) Code.—This Act received Royal Assent on Mar. 18, 1965 when the administration and general provisions in Part V came into effect. The Act provides in Parts I to IV, which came into force on July 1, 1965, minimum standards with respect to hours of work, minimum wages, annual vacations and general holidays in industries under federal jurisdiction. Under Sect. 23, Part III of the Code, the Annual Vacations Act, which was in effect from October 1958, was repealed.

Subsection 2.—Provincial Labour Legislation

Because of the authority given by the British North America Act to the provincial legislatures to make laws in relation to local works and undertakings and in relation to property and civil rights in the province, power to enact labour legislation is largely the prerogative of the provinces. Since it imposes conditions on the rights of the employer and employee to enter into a contract of employment, labour legislation is, generally speaking, law in relation to civil rights. Under this authority, the provincial legislatures have enacted a large body of legislation affecting the employment relationship in such fields as working hours, minimum wages, the physical conditions of workplaces, apprenticeship and training, wage payment and wage collection, labour-management relations, workmen's compensation and other matters. In each province a Department of Labour is charged with the administration of labour laws. Legislation for the protection of miners is administered by departments dealing with mines. The workmen's compensation law in each province is administered by a Workmen's Compensation Board appointed by the Lieutenant-Governor in Council.

As a means of ensuring adequate living standards for workers, all provinces have enacted minimum wage legislation. These laws vest in a minimum-wage-fixing board authority to set minimum wages for employees. Five provinces have general hours-of-work laws, which either limit daily and weekly working hours or require the payment of an overtime rate if work is continued beyond specified daily and weekly hours.

Hours of work are also restricted and minimum wages established for certain types of employment under industrial standards legislation in Nova Scotia, New Brunswick, Ontario, Saskatchewan and Alberta, under the Manitoba Construction Industry Wages Act and under the Quebec Collective Agreement Act (see p. 726).

Eight provinces have passed annual vacations laws (see pp. 723-724) and in most provinces there is legislation setting a minimum age for the employment of young workers in various industries and occupations. A weekly day of rest is provided for by law in most provinces. In two provinces there are statutory requirements regarding the observance of certain public holidays.

Factory or industrial safety Acts in most provinces establish safeguards for the protection of the health and safety of workers in factories and other workplaces with respect to such matters as sanitation, heating, lighting, ventilation and the guarding of dangerous machinery. Long-established laws regulating the design, construction, installation and operation of mechanical equipment such as boilers and pressure vessels, elevators and lifts and electrical installations, have been revised in recent years in line with technological changes, and legal standards have been set in new fields involving hazards to workers and the public, such as the use of gas- and oil-burning equipment. This legislation also prescribes standards of qualification for workers who install, operate or service such equipment. Laws requiring measures to be taken to eliminate accidents in construction and excavation work are in force in a number of jurisdictions.

All provinces have apprenticeship laws providing for an organized procedure of on-the-job training and school instruction in designated skilled trades, and statutory provision is made in most provinces for the issue of certificates of qualification, on application, to qualified tradesmen in certain trades. In some provinces legislation is in effect making it mandatory for certain classes of tradesmen to hold a certificate of competency.

In all provinces there is legislation similar in principle to the federal Industrial Relations and Disputes Investigation Act, designed to establish equitable relations between employers and employees and to facilitate the settlement of industrial disputes. These laws guarantee freedom of association and the right to organize, establish machinery (labour relations boards) for the certification of a trade union as the exclusive bargaining agent of an appropriate unit of employees, and make compulsory collective bargaining between an employer and the certified trade union representing his employees. Except in Saskatchewan, they provide for compulsory conciliation, that is, they require the parties to

comply with the conciliation procedures laid down in the Act before a strike or lockout may legally take place. A two-stage conciliation process is provided for—the intervention of a conciliation officer at the first stage of a dispute and, failing settlement, the establishment of a conciliation board. The Acts also provide for the compulsory settlement of any dispute that arises out of a collective agreement, and prohibit strike action while an agreement is in force. All prescribe and provide penalties for unfair labour practices. In some provinces certain classes of employees who are engaged in essential services, such as policemen and firemen, are forbidden to strike and, in lieu of the right to strike, have recourse to final and binding arbitration.

Seven provinces have adopted fair employment practices laws forbidding discrimination in hiring and conditions of employment and in trade union membership on grounds of race, colour, religion or national origin. In addition, the British Columbia law prohibits discrimination in employment or in trade union membership on grounds of age. The same provinces have laws providing that places to which the public is customarily admitted (the Quebec law applies to hotels, restaurants and camping grounds only) must be open to all without regard to race, colour, religion or national origin. Eight provinces have equal pay laws, which forbid discrimination in rates of pay solely on the basis of sex, and the Quebec statute respecting discrimination in employment forbids discrimination in employment on the basis of sex. In Ontario and Nova Scotia, fair employment practices, fair accommodation practices and equal pay laws have been combined in one statute (the Ontario Human Rights Code and the Nova Scotia Human Rights Act).

Workmen's compensation legislation providing a system of collective liability on the part of employers for accidents occurring to employees in the course of their employment are in force in all provinces. Workmen's compensation laws are described in greater detail on p. 750.

Changes in 1964.—There were a number of significant developments in provincial labour laws in 1964.

In Nova Scotia, a new Minimum Wage Act was passed, giving the Minimum Wage Board authority to set minimum rates for workers of both sexes. The law previously in effect applied to women only. The Act also contained provisions requiring an employer or employee to give at least one week's notice of termination of employment, if the employee has been in the employer's service for three months or more, and provided that all wages owing must be paid within 10 days of termination of employment.

New Brunswick enacted a Minimum Employment Standards Act, laying down requirements regarding weekly rest, minimum age for employment, working hours of women and boys under 18 and maternity leave which are applicable in every place of employment other than a private home or a farm.

The New Brunswick Vacation Pay Act was extended to cover virtually all employees in the province except domestic servants and farm workers. An amendment to the Alberta Labour Act gave the Board of Industrial Relations authority to provide for paid public holidays.

In Ontario, the Industrial Standards Act was extensively revised, putting into effect many of the recommendations of a Committee of Inquiry which had studied the scope and operation of the Act. Manitoba replaced its Fair Wage Act by the Construction Industry Wages Act. Provision was made, as before, for the setting of minimum rates of wages and maximum hours of work at regular rates for employees in the construction industry, based on the recommendations of a board equally representative of employers and employees in the industry, with a public member as chairman. Separate boards for different sectors of the industry are now provided for.

The Saskatchewan Legislature raised the school-leaving age from 15 to 16 years.

In Quebec, an Act was passed forbidding discrimination in employment and in trade union membership on grounds of race, colour, sex, religion, national extraction or social

origin. The British Columbia Fair Employment Practices Act was amended to prohibit discrimination in employment or in trade union membership against persons between the ages of 45 and 65 solely on grounds of their age.

Two provinces enacted new legislation designed to promote the training of more skilled workers. The Ontario Apprenticeship and Tradesmen's Qualification Act is a major revision of earlier legislation, along the lines suggested by a Select Committee on Manpower Training, providing the legislative authority for an expanded and modernized system of apprenticeship training and an extension of both compulsory and voluntary certification of tradesmen. The New Brunswick Tradesmen's Qualifications Act made provision for compulsory certification of tradesmen in designated trades.

Quebec adopted a new Labour Code and changes were made in the labour relations laws of several other provinces. The new Labour Code of Quebec puts into force new principles for the regulation of employer-employee relations in the province. It broadens the right of association, bringing virtually all workers in the province within its scope. Public service employees, who were formerly forbidden to strike and were compelled to submit all disputes to arbitration, have been granted the right to strike, subject to restrictions similar to those laid down in the United States Taft-Hartley Act. Compulsory arbitration no longer exists, except with respect to policemen and firemen. Amendments to the Nova Scotia Trade Union Act made the Labour Relations Board responsible for handling unfair labour practice charges.

Ontario passed the Industry Safety Act, a thorough revision and up-dating of its factory legislation, and issued comprehensive new regulations, strengthening and extending safeguards for employee safety. New Brunswick revised and replaced its Industrial Safety Act, which now applies to all workplaces except private homes and mining operations. This Act is also to be supplemented by extensive regulations.

Workmen's compensation laws were amended in six provinces. In Newfoundland, the maximum yearly earnings on which compensation may be paid were increased from \$4,000 to \$5,000. Manitoba and Ontario set higher minimum payments for total disability. Of special importance were the provisions in Manitoba and Quebec increasing payments to disability pensioners in respect to past accidents. In Ontario, the age limit for the payment of children's allowances was removed, permitting payments to be made, at the discretion of the Workmen's Compensation Board, as long as a child is continuing his studies. Increased expenditures for rehabilitation services were authorized in Manitoba and Ontario.

Further information about legislative changes in 1964 may be found in the *Labour Gazette*, October to December 1964 issues.

Regulation of Hours and Annual Vacations.—Ontario, Manitoba, Saskatchewan, Alberta and British Columbia have statutes of general application limiting working hours. The Acts are of two types. Those of Ontario, Alberta and British Columbia set actual limits on daily and weekly hours, and provide that work may not be carried on beyond those limits except with the permission of the administrative authority. The Manitoba and Saskatchewan Acts regulate hours through the requirement that one and one half times the regular rate must be paid if work is continued after specified limits. The Nova Scotia Minimum Wage Act passed in 1964 permits the Minimum Wage Board to limit hours of work but so far no limitations have been imposed. Hours are also regulated under the Industrial Standards Acts, the Manitoba Construction Industry Wages Act and the Quebec Collective Agreement Act (see p. 726) and there is, in addition, some regulation of hours under other legislation, such as factories Acts, mines Acts and, in Newfoundland, legislation governing shops.

In Ontario, working hours are limited to eight in a day and 48 in a week. In Alberta, the maximum daily and weekly hours permitted to be worked in all centres with a population of over 5,000 are eight and 44, and in the remainder of the province they are eight and 48. In British Columbia, hours are limited to eight in a day and 44 in a week. Under the Saskatchewan law, one and one half times the regular rate must be paid for work done

after eight hours in a day and 44 hours in a week, except in workplaces (other than factories) in the smaller centres, where the overtime rate must be paid after a 48-hour week. In addition to the above, the Lieutenant-Governor in Council has authority to limit daily hours in any class of employment in order to prevent the working of excessive hours; this authority has been used to limit daily hours to 12 in highway construction and maintenance. The Manitoba Act, which applies to the chief industrial areas of the province, requires one and one half times the regular rate to be paid after eight hours in a day and after 48 hours in a week for men and 44 hours for women. The Manitoba and British Columbia Acts cover specified industries but the other three Acts apply to most industries in the province concerned.

All provinces except Newfoundland and Prince Edward Island have annual vacations legislation applicable to most industries. In Nova Scotia, New Brunswick, Quebec and Ontario, workers are entitled to a vacation with pay of one week after a year of service; in the four western provinces, a vacation of two weeks with pay must be granted after a year of employment. In Saskatchewan, a worker becomes eligible for a vacation of three weeks after five years of service with the same employer. A worker employed for less than a year is entitled, in Quebec, to a half-day for each month of employment and, in Saskatchewan, to one day for every month. Coal miners in Alberta are entitled to a vacation of one day for every 20 days worked in a month but not more than two weeks in a year.

A stamp system of vacation pay credits is in effect for the construction industry in Alberta and Nova Scotia. In Ontario, the stamp system is used in any industry (including construction) in which employment is terminated during a working year. In Manitoba, vacation pay of transitory construction workers in Metropolitan Winnipeg is deposited by employers with the Department of Labour and disbursed to employees by cheque after the first day of July in each year.

Farm workers are excluded from the vacation provisions in all provinces and domestic servants in all but Manitoba and Saskatchewan. In addition, New Brunswick exempts certain part-time workers; Quebec exempts employees of municipal and school corporations, janitors and caretakers, salesmen with less than three months experience and certain part-time workers; Ontario exempts professional workers, salesmen, flower, fruit and vegetable growers, and funeral directors and embalmers; Nova Scotia excludes workers engaged in lumbering and commercial fishing; Alberta exempts salesmen; Manitoba and Saskatchewan exclude ranch and market garden employees; and British Columbia exempts professional workers and horticultural workers. Workers covered by decrees under the Quebec Collective Agreement Act are excluded from the vacation order and are subject to the annual vacation provided for in the decree concerned.

Minimum Wage Regulations.—All provinces have minimum wage legislation under which minimum rates are fixed by a government board. The British Columbia board makes a separate order for each industry or occupation. In New Brunswick, five new industry orders issued in 1964 and in force on Jan. 1, 1965, together cover most employees in the province. In the other provinces general orders are issued setting rates which apply to most industries and occupations. Except in two provinces, the general orders apply to both sexes. In Nova Scotia, minimum rates have been set for women only but a new Minimum Wage Act passed in 1964 gives authority to set rates for both sexes.* In Prince Edward Island, a general minimum wage order for male workers is in effect; the only rates set for women are for restaurant workers in Charlottetown and Summerside and for laundry workers throughout the province. Nova Scotia, Ontario and Quebec are divided into zones for minimum wage purposes and rates are set according to zone. In the three Prairie Provinces rates vary between rural and urban areas. Elsewhere minimum rates apply throughout the province. Weekly rates are set in some provinces, hourly rates in others.

Table 1 shows the minimum rates in effect on Jan. 1, 1965, for several classes of establishment in the principal cities.

* A new general order in Nova Scotia in force on Feb. 20, 1965, sets rates for both men and women.

70 cents; bell boys 56 cents.

⁵ Dollars per week for waitresses; \$16 for other restaurant workers.⁶ Dol-

lars per week.

Regulation of Wages and Hours of Work under Industrial Standards Legislation and the Quebec Collective Agreement Act.—Industrial Standards Acts are in effect in Nova Scotia, New Brunswick, Ontario and Saskatchewan and there are similar provisions in the Alberta Labour Act (Part IV). These provide that a schedule of wage rates and hours of work agreed upon by a representative group of employees and employers in an industry may, upon approval by the government, be given statutory effect by Order in Council, to become the minimum terms of employment for the entire industry in the area. This legislation applies only to certain trades and areas in the province concerned. It has been used fairly extensively in the building trades, the clothing industries, barbering and a few other industries. An advisory committee, usually equally representative of employers and employees, is established to assist in enforcing a schedule.

The Nova Scotia Act applies only to construction work in Halifax, Dartmouth and Sydney; 12 schedules of wages and hours for individual building trades were in force during the year ended Mar. 31, 1964. In New Brunswick, five schedules covering an individual building trade or group of such trades were in effect in the same period.

At the end of March 1964, there were 154 schedules in force under the Ontario Industrial Standards Act. Of these, 74 applied to the building trades, 69 to barbering and four to the retail gasoline service industry. Five schedules for the garment industries, one for the fur industry and one for hard furniture applied throughout the province.

In Saskatchewan, 18 schedules were in effect on Mar. 31, 1964, covering barbering, beauty culture, baking, carpentry, painting and the electrical trade. The schedule for barbering covered the whole province except the cities of Regina, Saskatoon, Moose Jaw and Prince Albert, for each of which a separate schedule was in effect. Each of the other schedules applied to a zone consisting of a city and its environs. In Alberta, 15 schedules were in force at the end of the year 1964. These governed, in one or more areas, certain building trades, dairy employees, garage and service station workers, and bakers and

bakery salesmen. In Manitoba, the Fair Wage Schedule for the construction industry sets a regular work week and hourly rates of wages for various classifications of workers. The schedule applies to private construction work in the larger centres of population as well as to public construction work throughout the province.

In the Province of Quebec, 99 decrees under the Collective Agreement Act were in force on Mar. 31, 1964, governing 36,803 employers and 254,967 employees. Of these, 17 applied to barbers and hairdressers, 16 to commercial establishments, 18 to the construction industry, 24 to manufacturing and 24 to other industries and services. Fourteen of the decrees had province-wide jurisdiction, governing the manufacture of women's clothing, dresses, hats and handbags, men's clothing, hats and shirts, the manufacture of shoes, leather gloves, furniture, corrugated paper boxes and caskets, the tanning industry and the building materials industry. The remaining decrees regulated an industry in a particular urban centre or region of the province. Each decree is enforced by a parity committee which has power to levy an assessment on employers and employees to obtain funds for the enforcement of the decree.

Section 2.—The Labour Force*

A current and periodic analysis of the state of employment in Canada was organized in 1945 to provide up-to-date and reliable information concerning the Canadian labour force. A labour force survey, on a sample basis, was conducted in November 1945 and quarterly surveys were carried out thereafter until November 1952, when the survey was placed on a monthly basis. A multi-stage area sample was used involving the selection of progressively smaller sample areas and ultimately of households. Random methods of choice were used at every stage of selection so that all members of the population had an equal chance of inclusion. The present sample covers more than 30,000 households throughout Canada. The estimates of the labour force are restricted to the civilian labour force. In addition to members of the Armed Forces, inmates of institutions and Indians living on reservations are excluded.

The labour force surveys provide a classification of persons 14 years of age or over on the basis of their activity during the week preceding the beginning of interviewing for the survey. The main divisions of the population are defined as follows:—

Labour Force.—The civilian labour force is composed of that portion of the civilian non-institutional population 14 years of age or over who, during the survey week, were employed or unemployed.

Employed.—The employed include all persons who, during the survey week: (a) did any work for pay or profit; (b) did any work which contributed to the running of a farm or business operated by a related member of the household; or (c) had a job but were not at work because of bad weather, illness, industrial dispute, or vacation, or because they were taking time off for other reasons. Persons who had jobs but did not work during the survey week and who also looked for work are included in the unemployed as persons without work and seeking work.

Unemployed.—The unemployed include all persons who, through the survey week: (a) were without work and seeking work, i.e., did no work during the survey week and were looking for work; or would have been looking for work except that they were temporarily ill, were on indefinite or prolonged layoff, or believed no suitable work was available in the community; or (b) were temporarily laid off for the full week, i.e., were waiting to be called back to a job from which they had been laid off for less than 30 days.

Not in the Labour Force.—Those not in the labour force include all civilians 14 years of age or over (exclusive of institutional population) who are not classified as employed or unemployed. This category includes those going to school, keeping house, too old or otherwise unable to work, and voluntarily idle or retired. Housewives, students and others who worked part time are classified as employed. If they looked for work they are classified as unemployed.

The estimates derived from the labour force surveys are subject to sampling error. In general, the percentage of error tends to decrease as the size of the estimate increases.

* Prepared in the Special Surveys Division, Dominion Bureau of Statistics.

The chances are about 19 out of 20 that the difference between the estimate and the figure which would have been obtained from a complete count is less than shown below. The sampling variabilities indicated are averages, since sampling error differs from characteristic to characteristic; in particular, for the unemployed the sampling variability is about 40 p.c. higher than the general average.

<i>Size of Estimate</i>	<i>Sampling Variability</i>
10,000.....	3,500
50,000.....	8,000
100,000.....	11,000
500,000.....	24,000
1,000,000.....	33,000
5,000,000.....	58,000
6,000,000.....	60,000

2.—Estimates of the Civilian Labour Force and its Main Components, Annual Averages, 1946 and 1955-64

NOTE.—Comparable figures for 1947-54 are given in the 1962 Year Book, p. 708. Figures do not include inmates of institutions and Indians on reservations.

¹ Excludes Newfoundland.

Characteristics of the Civilian Labour Force, 1946-64.—The civilian non-institutional population averaged 12,817,000 in 1964 compared with 8,779,000 in 1946, an increase of 46.0 p.c., and during the same period the labour force rose by only 43.6 p.c. to 6,933,000. Thus, the proportion of the population 14 years of age or over in the labour force, which was 55.0 p.c. in 1946, dropped to 54.1 p.c. in 1964. Contributing to this decrease were such factors as shifts in the age composition of the population, the tendency for young people to remain in school until they are a little older and the tendency for older persons to retire at an earlier age. The effect of these factors was greater among men, whose rate of labour force participation dropped from 85.1 p.c. in 1946 to 78.1 p.c. in 1964. Although the growth in the female labour force was also affected by these factors, there was an offsetting development. From 1953 there was a rapid increase in job opportunities for women, particularly married women. The female participation rate dropped slightly from 24.7 p.c. in 1946 to 23.4 p.c. in 1953 and then rose to 30.5 p.c. in 1964. During the 1953-64 period, the participation rate for the female group 25-44 years of age rose from 23.1 p.c. to 31.7 p.c. and for the 45-64 age group from 17.2 p.c. to 31.6 p.c. In 1964, women

in the labour force numbered 1,972,000, about half of whom were married (excluding widowed, divorced and separated). Total employment in that year averaged 6,609,000, an increase of 41.6 p.c. over 1946. The number of men employed (4,698,000) was 30.2 p.c. higher and the number of women employed (1,911,000) was 80.8 p.c. higher.

Between 1946 and 1964, employment in agriculture dropped from 1,186,000 to 630,000, a decline of 46.9 p.c. On the other hand, employment in non-agricultural industries increased by 71.8 p.c. from 3,480,000 to 5,979,000 and the number of paid workers employed in non-agricultural industries rose by 79.5 p.c. from 2,990,000 to 5,368,000. Important changes also occurred in the distribution of employment among industries. In 1964, the goods-producing industries accounted for 44 p.c. and the service-producing industries for 56 p.c. of total employment compared with 60 p.c. and 40 p.c., respectively, in 1946. The most notable shift was in agriculture. In 1946, about one in four employed persons worked in agriculture whereas in 1964 the proportion was one in ten. The proportion employed was substantially higher in 1964 than in 1946 in trade and service industries. In all other non-agricultural industry groups the proportion employed was little changed. In 1964, almost one out of every two employed women worked in service industries as compared with one out of every three in 1946.

On an annual average basis, unemployment as a percentage of the labour force fluctuated widely during the period, ranging between 2.2 p.c. in 1947 and 7.1 p.c. in 1961; it averaged 4.7 p.c. in 1964. Throughout the period, unemployment rates were substantially lower for women than for men.

The number of persons 14 years of age or over not in the labour force averaged 5,884,000 in 1964 compared with 3,950,000 in 1946, an increase of 49 p.c. Housewives and students together constituted more than 80 p.c. of the total in the later year; the number of women keeping house increased by almost one third during the period and the number of students more than doubled.

¹ Excludes Newfoundland.

² Classified according to the 1948 Canadian standard industrial classification.

³ Classified according to the 1960 Canadian standard industrial classification.

Employment was substantially higher in 1964 than in 1946 in all regions. British Columbia experienced the largest increase of 55.1 p.c. followed by Ontario with 49.5 p.c., Quebec with 42.4 p.c., the Prairie region with 22.7 p.c. and the Atlantic region (excl. Newfoundland) with 9.4 p.c. In all regions, however, the increase in employment was not as great as the growth of the labour force and, as a consequence, there was a rise in unemployment. Unemployment in Canada averaged 324,000 in 1964, 4.7 p.c. of the labour

force. The unemployed were distributed regionally as follows: Quebec 38.3 p.c., Ontario 25.6 p.c., Atlantic 14.2 p.c., Prairie 11.4 p.c. and British Columbia 10.5 p.c. In 1946, the unemployed were distributed among the regions in just about the same proportions.

Similarly, unemployment rates were higher in 1964 than in 1946. In the later year the unemployed as a percentage of the labour force in each of the five regions was as follows: Atlantic 7.8 p.c., Quebec 6.4 p.c., British Columbia 5.3 p.c., Ontario 3.2 p.c., and Prairies 3.1 p.c. From 1946 on, unemployment rates for the Atlantic region and Quebec were consistently higher than the national average and for Ontario and the Prairie region they were consistently lower. The British Columbia rate was above the national average in every year except 1955 and 1956.

Section 3.—Employment, Earnings and Hours*

Monthly records of employment have been collected from larger business establishments since 1921. At that time a survey was instituted to provide employment index numbers which would serve as current economic indicators. In 1941 the survey was extended to provide information on payrolls and per capita wages and salaries and in 1944 it was further extended to provide data on hours of work and hourly and weekly wages. During the war period also, separate records for men and women employees were established.

The survey covers firms that usually employ 15 or more persons in all sectors of the following major industrial divisions: forestry; mining; manufacturing; construction; transportation, storage and communication; public utility operation; trade; and finance, insurance and real estate. Also included are certain branches of the service industry, mainly hotels and restaurants, laundries and dry-cleaning plants, and recreational and business services. The survey excludes agriculture, public administration and community services such as health and education. The coverage corresponds closely, therefore, to the business sector of the economy. Since the survey does not cover small firms and excludes several industries, the employment records are published in the form of index numbers (1949 = 100).

The monthly employment statistics relate to the number of employees drawing pay in the last pay period in the month. Data are requested for all classes of employees with the exception of homeworkers and casual employees working less than one day in the pay period. Owners and firm members are also excluded. The respondents report the gross wages and salaries paid in the last pay period in the month, before deductions are

* Prepared in the Employment Section, Labour Division, Dominion Bureau of Statistics.

made for income tax, unemployment insurance, etc. The reported payrolls represent gross remuneration for services rendered and paid absences in the period specified, including salaries, commissions, piecework and time work payments, and such items as shift premiums, and regularly paid production, incentive and cost-of-living bonuses. The statistics on hours relate to the straight and overtime hours worked by those wage-earners for whom records of hours are maintained, and also to hours credited to wage-earners absent on paid leave during the reported period. If the reported period exceeds one week, the payroll and hours data are reduced to weekly equivalents.

Subsection 1.—Employment and Weekly Wages and Salaries

Following the end of the War, the composite index of employment (1949 = 100) showed successive gains each year, except for 1954, until 1957 when a peak of 122.6 was reached. For the next four years the index fluctuated some 3 to 4 p.c. below the 1957 point but in 1962 again moved upward. Successive increases carried it to a new record of 130.4 in 1964, more than 6 p.c. above the 1957 level.

The general recovery in employment started in the second quarter of 1961 and continued through 1964. Over the four-year period, the industrial composite rose by 10.4 p.c.; manufacturing increased 11.9 p.c., trade by 11.4 p.c., service by 24.0 p.c. and finance, insurance and real estate by 14.6 p.c. The increase in manufacturing was particularly significant in view of the fact that this industry accounts for over 40 p.c. of industrial employment as measured by the employment survey. Only mining actually declined in the four-year period, although forestry and transportation, storage and communication showed little improvement. Each of these three industry divisions is experiencing a long-term trend toward reduced levels of employment within particular areas or segments.

6.—Annual Average Index Numbers of Employment by Industrial Division, 1955-64, and Monthly Indexes 1964

NOTE.—These indexes are calculated as at the last pay period of each month, on the base 1949=100. Comparable averages for significant years 1921-54 are given in the 1963-64 Year Book, p. 717.

Average weekly wages and salaries have increased substantially in the years for which current payroll statistics have been collected, rising from \$23.44 in 1939 to \$86.68 in 1964. Following the relaxation of wartime wage restrictions in 1946 and the progressive lifting of price controls, the upward movement in per capita earnings gained momentum and average annual increases from 1946 to 1952 were more than twice as great as those between 1939 and 1946. After 1952 the rate of increase in per capita earnings, in terms of year-to-year percentage changes, fell slightly below that recorded during the war years. This slowdown was most pronounced between 1959 and 1962, during which time average earnings rose at rates of about 3 p.c. per annum. Over the next two years the rate increased moderately and earnings in 1964 were 3.9 p.c. higher than in 1963.

¹ Mainly hotels, restaurants, laundries, dry-cleaning establishments and recreational and business services.

Subsection 2.—Hours and Earnings of Hourly Rated Wage-Earners

Since 1945, the monthly survey of employment and payrolls has covered statistics of hours of work and paid absence of those wage-earners for whom records of hours are maintained, together with the corresponding totals of gross wages paid. These wage-earners are mainly hourly rated production workers; information on hours is frequently not kept by employers for ancillary workers, nor in many industries and establishments, for any wage-earners. Salaried employees are excluded by definition from the series. As a result of these exclusions, data are available for fewer industries and workers than are covered in the employment and average weekly wage and salary statistics.

During the ten-year period 1955-64, there was little change in average weekly hours but average hourly and weekly wages rose substantially. For the most part, upward wage-rate revisions in all industries were responsible for the increases. Technological changes, which in many cases involve the employment of more highly skilled workers at the expense of those in the lower-paid occupations, also contributed to the advance of average hourly earnings. From 1955 to 1964, average weekly wages rose 39.4 p.c. in manufacturing, 40.1 p.c. in mining and 52.9 p.c. in building and general engineering. Average hourly earnings increased 39.3 p.c. in manufacturing, 43.5 p.c. in mining and 50.9 p.c. in building and general engineering. In manufacturing, 1964 average hourly earnings of \$2.02 and average weekly wages of \$82.90 represented increases of 3.6 p.c. and 4.4 p.c., respectively, over the 1963 levels.

¹ The durable goods group includes wood products, iron and steel products, transportation equipment, non-ferrous metal products, electrical apparatus and supplies, and non-metallic mineral products; the non-durable goods group includes all other manufacturing industries.

Section 4.—Wage Rates, Hours of Labour and Other Working Conditions

Statistics on occupational wage rates by industry and locality, with standard weekly hours of labour, are compiled by the federal Department of Labour and published in the annual report *Wage Rates, Salaries and Hours of Labour*.

The statistics published are based on an annual survey covering some 28,000 establishments in most industries and apply to the last normal pay period preceding Oct. 1. Average wage rates of time workers and average straight-time earnings of piece workers and other incentive workers in a given occupation are given separately in the report but are combined in the calculation of industry index numbers shown in Table 14. Predominant ranges of rates for each occupation used are also given; overtime pay is excluded.

The index numbers of Table 14 measure changes in wage rates for non-office employees below the rank of foreman. They do not, however, provide a basis for comparing the level of wages in one industry with that in another. Information on concepts and methods of developing these statistics is given in the annual report.

14.—Index Numbers of Average Wage Rates for Certain Main Industrial Groups, 1955-64 (1949=100)

NOTE. Indexes back to 1901 may be obtained from the Department of Labour publication *Wage Rates, Salaries and Hours of Labour 1962*.

¹ "Other Industries" consists of logging; mining; transportation (all sectors including air transportation), storage and communication (including radio and TV); public utilities; trade; finance; and government and personal service.

Table 16 gives summary data on working conditions of plant and office employees in manufacturing industries for the years 1960-64 and also for all industries in 1963 and 1964. The percentages in this table denote the proportions that employees—plant or office—of establishments reporting specific items bear to the total number of all such employees in all establishments replying to the survey; they are not necessarily the proportions of employees actually covered by the various items.

Further details and additional information may be seen in the annual report *Working Conditions in Canadian Industry*, compiled and published by the Department of Labour and based on a survey at May 1 each year of some 20,000 establishments.

Wages of Farm Labour.—The information on farm wages is provided by volunteer farm correspondents located in all provinces except Newfoundland. The rates presented in Table 17 are average wages paid to all farm help regardless of age and skill. Because the rates reported may cover a wide range of skills, of types of work and of ages of hired workers.

the value of the resulting data is considered to be an indicator of trends rather than a measure of absolute wage levels. No attempt has been made to have the wage rates reflect such perquisites as separate housing accommodation, fuel, electricity and food which, under some conditions of hiring, are supplied by employers to their hired farm help.

17.—Average Daily and Monthly Wages of Male Farm Help as at Jan. 15, May 15 and Aug. 15, 1963-65

NOTE.—Figures from 1940 are given in the corresponding table of previous Year Books beginning with the 1943-44 edition.

Section 5.—Unemployment Insurance and National Employment Service

Unemployment Insurance.*—During the depression of the 1930's the need for a nation-wide unemployment insurance program became recognized. In 1935 the Employment and Social Insurance Act was passed by the Federal Parliament but was subsequently declared invalid by the Privy Council. Later, by consent of the provinces, an amendment to the British North America Act was obtained empowering the Federal Parliament to legislate on unemployment insurance and in 1940 the Unemployment Insurance Act was passed, making provision for a compulsory contributory unemployment insurance program at the national level and also for the establishment of a national employment service to operate in conjunction with and ancillary to the unemployment insurance operations. The Act came into effect on July 1, 1941; amended on several occasions, it was replaced by a new Unemployment Insurance Act, effective Oct. 2, 1955.† On Apr. 1, 1965, the operation of the National Employment Service was transferred to the Department of Labour.

Legislation provides for compulsory coverage of some four fifths of all non-agricultural employees under an insurance program administered by the Federal Government, and requires employers to join with their insurable employees and the Government in building up a fund. This fund is held in trust by the Unemployment Insurance Commission for the payment of benefit to eligible unemployed persons. The Act is administered by a Commission of three persons appointed by the Governor in Council, of whom one is the Chief Commissioner; one Commissioner, other than the Chief Commissioner, is appointed after consultation with employer organizations and the other after consultation with employee organizations.

The Unemployment Insurance Act applies to all persons employed under a contract of service,‡ except the following: employment in specified industries or occupations such as agriculture, horticulture and forestry (effective Jan. 1, 1956, coverage was also extended to certain employments in these three industries); the Canadian Armed Forces; the permanent public service of the Federal Government; provincial government employees except where insured with the concurrence of the government of the province; certified permanent employees of municipal or public authorities; private domestic service; private-duty nursing; teaching; certain director-officers of corporations; workers on other than an hourly, daily or piece rate earning more than \$5,460 a year effective Sept. 27, 1959, unless they elect to continue as insured persons; employees in a charitable institution or in a hospital not carried on for purpose of gain except where the institution or hospital consents to insure certain groups or classes of persons with the concurrence of the Commission. All persons paid by the hour, day, or at a piece rate (including a mileage rate) are insured regardless of amount of earnings.

The amount of the employee contribution is determined by the employee's weekly earnings; an equal contribution is required from the employer. The Federal Government contributes one fifth of the aggregate employer-employee contribution and defrays administrative expenses. Contributions became payable on July 1, 1941. Benefit became payable on Jan. 27, 1942 and by Mar. 31, 1964 a total of \$4,475,000,000 had been paid.

The following statement shows the current weekly rates of contribution and benefit effective Sept. 27, 1959. The weekly contribution is based on actual earnings in the week, irrespective of the number of days worked. The benefit rates are calculated on the

* Prepared by the Unemployment Insurance and Pensions Section, Labour Division, Dominion Bureau of Statistics; statistics of unemployment insurance are compiled and published by the DBS from material supplied by the Unemployment Insurance Commission.

† Copies of the 1955 Act incorporating subsequent amendments are available from the Queen's Printer, Ottawa (Catalogue No. LU2-359).

‡ Commencing Apr. 1, 1957, coverage was extended to persons engaged in fishing, notwithstanding the fact that such persons are not employees of any other person but are usually self-employed.

average weekly contributions for the last 30 weeks in the 104 weeks preceding claim. In order to qualify for regular benefit, a claimant must have at least 30 weekly contributions in the last 104 weeks prior to claim, eight weekly contributions since the start of the last preceding regular benefit period or in the last year prior to claim, whichever is the shorter period, and 24 weekly contributions since the start of the last preceding benefit period, or in the year prior to the claim, whichever is the longer period.

WEEKLY RATES OF CONTRIBUTION AND BENEFIT UNDER THE UNEMPLOYMENT INSURANCE ACT, IN EFFECT FROM SEPT. 27, 1959

NOTE.—Weekly rates in effect from Oct. 2, 1955 to Sept. 26, 1959 are given in the 1962 Year Book, p. 738.

¹ A half stamp.

The Act contains a special provision whereby the regular contribution requirements are relaxed somewhat during a 5½-month period commencing with the first week of December each year. Under this provision, claimants unable to fulfil the contribution requirements for regular benefit may draw "seasonal benefit" if they have at least 15 contribution weeks during the fiscal year or, failing this, if they terminated regular benefit since the previous mid-May.

Statistics on the Operation of the Act.—In order to assess the impact of changing economic conditions on the insurance program, provision is made for collection of current operational data, such as claims filed and processed and payments made. This information is published monthly in the *Statistical Report on the Operation of the Unemployment Insurance Act* (Catalogue No. 73-001). Current claims and payment data are useful for administrative purposes and are also a source of information to the public regarding financial and other aspects of the program.

Persons wishing to draw benefit must file either an initial or a renewal claim. Where it is necessary to compute entitlement to benefit, an initial claim is taken, otherwise a renewal. In the main, initial and renewal claims combined are an approximation of recorded separations from employment during a month. However, if a claimant exhausts his benefit and wishes to be reconsidered for further benefit, an initial claim is required. Such claims, accounting for approximately 15 p.c. of the monthly volume in 1964, are not new cases of disemployment. The count of claimants at the month-end indicates the extent to which claimants maintain contact with local offices of the Commission.

¹ Average of month-end data.

In addition to the monthly data published on the operation of the Unemployment Insurance Act, annual tabulations are compiled regarding persons employed in insurable employment and benefit periods established and terminated. These data are published in the annual report *Benefit Periods Established and Terminated under the Unemployment Insurance Act* (Catalogue No. 73-201). Data on persons insured under the Act are obtained from a 10-p.c. sample of insurance books and contribution cards renewed at June 1 each year. Included are persons engaged in insurable employment as well as persons on claim at that date.

19.—Persons Insured under the Unemployment Insurance Act, by Industrial Group and Sex, 1963 and 1964

Benefit.—The duration of regular benefit is related to the contribution history—one week's benefit for every two weeks' contributions in the past 104 weeks with a maximum of 52 weeks. However, contributions more than one year old cannot be used if they have already been taken into account in computing previous rights. Disqualifications for benefit include: loss of work owing to a labour dispute in which the contributor is participating or directly interested; unwillingness to accept suitable employment; being an inmate of any prison or any institution supported out of public funds; refusal to attend a course of instruction or training if directed to do so; residence outside Canada unless otherwise prescribed. Disqualification of a claimant for a period not exceeding six weeks may be imposed if an employee is discharged by reason of his own misconduct or leaves the employment voluntarily without just cause or refuses suitable employment.*

Table 20 distributes regular benefit periods terminated by province and shows average weeks and average dollar benefit paid on these terminations. A claimant establishes a *regular benefit period* when he submits his claim in the prescribed manner and proves he has fulfilled the minimum contribution requirements. The duration of benefit and the weekly rate authorized, comprising total entitlement, are then calculated and the claimant's benefit may be drawn upon during successive intervals of unemployment. His benefit period terminates either when he has exhausted the amount authorized or when 12 months have elapsed since he established, whichever comes first.

* This list should not be considered exhaustive; more detail may be obtained from the Unemployment Insurance Act and Regulations.

National Employment Service.—On Apr. 1, 1965, the National Employment Service, which had operated since 1941 under the jurisdiction of the Unemployment Insurance Act, was transferred to the Department of Labour. The transfer was recommended by the Gill Committee of Inquiry into operations under the Unemployment Insurance Act in order to place most of the essential elements of manpower policy within the authority of the Minister of Labour. The National Employment Service is now the key operational agency in the manpower field. In addition to maintaining the free employment service, the 1963 and 1964 operations of which are shown in Table 23, it gathers and disseminates information regarding labour demand and supply, and deals with the movement of workers from one area to another.

Section 6.—Industrial Accidents and Workmen's Compensation

Fatal Industrial Accidents.—Data on fatal industrial accidents, compiled by the federal Department of Labour, are obtained from provincial Workmen's Compensation Boards, from the Board of Transport Commissioners and other government authorities, and from press reports.

Of the 1,280 fatal accidents to industrial workers that occurred during 1964, 318 were the result of the victims being struck by objects—63 by falling trees or limbs, 61 by landslides or cave-ins, 34 by materials falling from stockpiles or loads, 23 by automobiles or trucks and the remainder by other falling or flying objects. Falls and slips were responsible for 269 fatalities, collisions, derailments, wrecks, etc., for 263, and 142 fatalities were included in the classification "caught in, on or between objects, vehicles, etc.". There were 98 deaths caused by exposure to dust, poisonous gases and poisonous substances, 68

by conflagrations, explosions and exposure to hot substances, 51 by contact with electric current, 28 by over-exertion, strains, etc., and eight by striking against or stepping on objects. The remainder were the result of miscellaneous accidents.

Workmen's Compensation.*—In all provinces legislation is in force providing for compensation for injury to a workman by accident arising out of and in the course of employment, or for disablement caused by a specified industrial disease, except where the workman is disabled for fewer than a stated number of days. The Acts of all provinces provide for a compulsory system of collective liability on the part of employers. To ensure payment of compensation, each Act provides for an accident fund, administered by the province, to which employers are required to contribute at a rate determined by the Workmen's Compensation Board in accordance with the hazards of the industry. A workman to whom these provisions apply has no right of action against his employer for injury from an accident during employment. The Acts vary in scope but in general they cover construction, mining, manufacturing, lumbering, transportation and communications and the operation of public utilities. The Acts also cover various types of commercial establishments. Undertakings in which not more than a stated number of workmen are usually employed are excluded in some provinces. In Ontario and Quebec, public authorities, railway and shipping companies, and telephone and telegraph companies are individually liable for compensation as determined by the Board and pay a proportion of the expenses of administration. A federal Act provides for compensation for accidents to Federal Government employees according to the scale of benefits provided by the Act of the province in which the employee is usually employed. Seamen who are not under a provincial Workmen's Compensation Act are entitled to compensation under the Merchant Seamen Compensation Act.

Benefits in case of disability include all necessary medical care and hospitalization, cash payments during the period of temporary disability to indemnify the injured workman for loss of wages, a life pension for any resulting permanent disability, and rehabilitation services. In the case of the death of the workman, a widow is granted a monthly pension, a special lump sum payment, an allowance for funeral expenses and a monthly payment for each child under the age limit provided by the law. When there is no dependent widow or children and there are other dependants such as a parent or parents, an award is made which, in the judgment of the Board concerned, is proportionate to the pecuniary loss sustained.

Table 25 gives the number of industrial accidents reported by each of the provinces and the amount of compensation paid by Workmen's Compensation Boards in the year 1963.

* More detailed information is given in the Department of Labour publication *Workmen's Compensation in Canada, A Comparison of Provincial Laws*.

¹ Accidents requiring medical treatment but not causing disability for a sufficient period to qualify for compensation; the period varies in the several provinces.

² Includes, except where noted otherwise, payments to compensate loss of earnings, medical aid payments, cost of rehabilitation and hospitalization (not including capital expenditures) and pensions paid (not pensions awarded) for temporary and permanent disabilities.

³ Includes payments by employers who make direct compensation to their employees; such employees come under Schedule II of the Ontario and Quebec Workmen's Compensation Acts.

⁴ From Jan. 1, to Sept. 30, 1963.

Section 7.—Organized Labour in Canada

Union membership in Canada at the beginning of 1965 totalled 1,589,000, the highest on record. It amounted to 29.7 p.c. of the 5,343,000 non-agricultural paid workers in Canada as of January 1965, and 23.2 p.c. of the over-all labour force.

26.—Union Membership in Canada, 1937-65

¹ Figures for years up to and including 1949 are as at Dec. 31; figures from 1951 are as at Jan. 1.

² Newfoundland included from 1949.

³ Adjustment in coverage resulted in a net addition of approximately 23,000 members.

⁴ Includes an addition of approximately 7,000 members resulting from improved coverage.

Almost three quarters of all union members in Canada were in organizations affiliated with the Canadian Labour Congress (CLC); in most cases these unions were also affiliated with the American Federation of Labor and Congress of Industrial Organizations. Another 9.4 p.c. of the total union membership in 1965 was affiliated with the Confederation of National Trade Unions (CNTU). Unaffiliated international and national unions accounted for 12 p.c., while 3 p.c. was in independent local organizations.

The 1965 union membership in Canada was higher by almost 96,000 than the previous year, a net gain of 6.4 p.c., and the highest percentage increase in any year since 1956. Among international unions operating in Canada, the largest increase was reported by the United Automobile and Aerospace and Agricultural Implement Workers of America, with

a gain of 14,000 members over 1964. The United Steelworkers of America reported an increase of 8,000 and the International Brotherhood of Carpenters and Joiners of America an increase of 6,900. Membership increases of 4,300 and 4,200 were reported by the United Brotherhood of Woodworkers and the International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America, respectively. Substantial increases were also reported by several federations of the CNTU. The National Federation of Services (Fédération Nationale des Services) increased its membership by 7,000 during the year, the Building Workers Federation (Fédération des Travailleurs en Bâtiments du Canada) by 5,200 and the Clothing Workers Federation (Fédération Nationale des Travailleurs de l'Industrie du Vêtement) and the Metal Trades Federation (Fédération Nationale de la Métallurgie) each reported increases of 3,000; most of the increase in the Clothing Workers' Federation resulted from its merger with the Leather and Shoe Workers' Federation.

The 1965 figures show an increase of 75,000 or 6.8 p.c. for the CLC and an increase of 28,500 or 23.5 p.c. for the CNTU. While much of the change in congress-affiliated membership reflected actual increases in the number of union members, it should be noted that some is accounted for by changes in affiliation; the affiliation with a congress of a formerly independent union, for instance, shows up as an increase in congress membership and a corresponding decrease in the membership of the independent unions. The figures for total union membership are not, however, affected by these internal shifts.

Few unions registered decreases in membership between 1964 and 1965. The Canadian Brotherhood of Railway, Transport and General Workers reported a drop of 3,600 members, due mainly to its replacement by a CNTU-affiliated union as bargaining agent for employees of the Montreal Transportation Commission and the Provincial Transport Company. District 50, United Mine Workers of America reported 1,000 fewer members in 1965, the Canadian Union of Public Employees membership was down by 1,250 and the National Council of Canadian Labour and the Seafarers' International Union of Canada both registered decreases of 900 members.

The ten largest unions, listed below in order of their membership in 1965, made up 36 p.c. of Canada's union membership in 1965:—

<i>Relative Position in 1965</i>	<i>Union and Affiliation</i>	<i>Member- ship in 1965</i>	<i>Relative Position in 1964</i>
		No.	
1.	United Steelworkers of America (AFL-CIO/CLC)	110,000	1
2.	Canadian Union of Public Employees (CLC)	84,800	2
3.	International Union, United Automobile, Aerospace and Agricultural Implement Workers of America (AFL-CIO/CLC)	77,500	3
4.	United Brotherhood of Carpenters and Joiners of America (AFL-CIO/CLC)	64,000	4
5.	International Woodworkers of America (AFL-CIO/CLC)	43,600	6
6.	International Brotherhood of Teamsters, Chauffeurs, Warehousemen and Helpers of America (Ind.)	42,400	7
7.	International Association of Machinists (AFL-CIO/CLC)	41,200	5
8.	International Brotherhood of Electrical Workers (AFL-CIO/CLC)	38,000	8
9.	International Brotherhood of Pulp, Sulphite and Paper Mill Workers (AFL-CIO/CLC)	36,900	9
10.	Canadian Brotherhood of Railway, Transport and General Workers (CLC)	32,100	10

Affiliates of the CLC, with a total membership of 1,181,100, included 110 national and international unions and 162 directly chartered locals. International unions comprised 84 p.c. of the total CLC membership and national unions, including directly chartered locals, for the remainder. There were 13 federations (with 640 locals) in the CNTU at the beginning of 1965. These, together with the 54 non-federated locals of the CNTU, comprised a total membership of 150,100, an increase of 71 locals and 28,500 members over the 1964 figure.

International unions with branches in both Canada and the United States had a total membership of 1,124,700 or 71 p.c. of the total. Of the 110 international unions active in Canada, 89 were affiliated with the AFL-CIO and the CLC; eight were affiliates of the AFL-CIO only, and three were affiliated with the CLC only; there were two unaffiliated railway unions and eight other unaffiliated unions. The membership of 52 national unions in 1965 stood at 389,700. CLC affiliates among these had 166,000 members, or 43 p.c. CNTU-affiliated unions had 37 p.c. of the total membership of national unions and there were 21 unaffiliated national unions with 81,200 members.

CLC directly chartered locals numbered 162 with 19,100 members; the 54 non-federated locals of the CNTU had 7,500 members. The 138 independent local organizations covered by the survey had 47,600 members.

27.—Union Membership, by Type of Union and Affiliation, as at January 1965

Type and Affiliation	Unions	Locals	Membership
	No.	No.	No.
International Unions	110	4,680	1,124,741
AFL - CIO/CLC.....	89	4,207	982,748
CLC only.....	3	47	13,291
AFL - CIO only.....	8	12	17,555
Unaffiliated railway brotherhoods.....	2	119	8,789
Other unaffiliated unions.....	8	295	102,358
National Unions	52	2,593	389,746
CLC.....	18	1,592	165,984
CNTU.....	13	640	142,522
Unaffiliated unions.....	21	361	81,240
Directly Chartered Local Unions	216	216	26,655
CLC.....	162	162	19,124
CNTU.....	54	54	7,531
Independent Local Organizations	138	138	47,613
Grand Totals	516	7,627	1,558,755

A complete list of the individual international and national unions, with number of locals and membership in Canada, is carried in the annual Department of Labour publication *Labour Organizations in Canada*, available from the Queen's Printer, Ottawa, price 50 cents.

Section 8.—Strikes and Lockouts

Statistical information on strikes and lockouts in Canada is compiled by the Economics and Research Branch of the Department of Labour on the basis of reports from the National Employment Service. Table 28 covers strikes and lockouts lasting ten man-days or more. The developments leading to work stoppages are often too complex to make it practicable to distinguish statistically between strikes on the one hand and lockouts on the other. However, a work stoppage that is clearly a lockout is not often encountered.

The number of workers involved includes all workers reported on strike or locked out, whether or not they all belonged to the unions directly involved in the disputes leading to work stoppages. Workers indirectly affected, such as those laid off as a result of a work stoppage, are not included. Duration of strikes and lockouts in terms of man-days is calculated by multiplying the number of workers involved in each work stoppage by the number of working days the stoppage was in progress. The duration in man-days of all work stoppages in a year is also shown as a percentage of estimated working time, based on the annual average of all non-agricultural paid workers in Canada. The data on duration of work stoppages in man-days are provided to facilitate comparison of work stoppages in terms of a common denominator. They are not intended as a measure of the loss of productive time to the economy.

28.—Strikes and Lockouts, by Industry, 1964 with Totals for 1960-64

NOTE.—Comparable statistics, except for 1961, are given in the corresponding table of previous Year Books; the latter are available in the Department of Labour annual publication *Strikes and Lockouts in Canada*.

Industry	Strikes and Lockouts Beginning during Year	Strikes and Lockouts in Existence during Year		
		Strikes and Lockouts	Workers Involved	Duration in Man-Days

Section 9.—Canada and the International Labour Organization

The Department of Labour is the officially designated liaison between the Government of Canada and the International Labour Organization. The ILO was established in 1919, in association with the League of Nations under the Treaties of Peace, with the object of improving labour and social conditions throughout the world by international negotiations, legislative action and other means. Under an agreement approved by the General Con-

ference of the International Labour Organization and by the United Nations General Assembly in 1946, the Organization became a specialized agency of the United Nations, although it retained its autonomy.

The ILO is an association of 114 Member States, financed by their governments and democratically controlled by representatives of those governments and of their organized employers and workers. It is comprised of three main organs—the Governing Body, the International Labour Conference, and the International Labour Office.

The Governing Body consists of 48 members—24 government representatives, 12 employers' representatives and 12 workers' representatives. Of the government seats, each of the 10 Member States of chief industrial importance (of which Canada is one) holds a permanent place and the other 14 government representatives are elected triennially by the Conference. The worker and employer members are elected by their groups every three years at the same Conference. The Governing Body, which usually meets three times a year, supervises the work of the International Labour Office and co-ordinates the programs of the various conferences and committees, in addition to framing the budget and approving the agendas of the conferences and meetings. One main subject being discussed by the Governing Body in 1965 is the modernization of ILO programs and structure required to meet current world problems. Canada's government representative on the Governing Body is the Deputy Minister of Labour for Canada; there are also elected employer and worker representatives from Canada on the Governing Body.

The International Labour Conference is a world assembly for the discussion of labour and social problems. It meets annually and is attended by four delegates from each Member State (two representing the government, one representing the employers and one representing the workers) accompanied by technical advisers. The Conference formulates international standards concerning working and living conditions in the form of Conventions (which are subject to ratification by the Member States concerned) and Recommendations (which are guides for framing legislation and regulations). Canada is represented at each annual conference and most of the special meetings, and accounts of the discussions and decisions are regularly published in the *Labour Gazette*.

There have been 49 sessions of the International Labour Conference up to 1965, at which 124 Conventions and 125 Recommendations have been adopted. Canada has ratified 21 of these Conventions, of which 12 concern maritime and dock labour. The most recent Convention to be ratified by Canada was No. 111 prohibiting discrimination in employment and occupation. As 1965 is International Co-operation Year, an intensive study is being made of the whole range of Conventions in co-operation with the provinces, to ascertain the possibility of ratifying some others. The Department of Labour is responsible for forwarding to the ILO annual reports on ratified Conventions as well as periodic reports on many other industrial and social matters.

The International Labour Office acts as the permanent secretariat of the ILO, and as a world research and information centre and publishing house on subjects concerned with working and living conditions. In the operational field it assists Member States by furnishing experts on manpower training and other types of technical assistance. The ILO maintains branch offices in all parts of the world; the Canada Branch is located at 202 Queen Street, Ottawa.

Ten tripartite industrial committees have been established to deal with problems of important world industries. By the holding of regional and special technical conferences, and by technical assistance to aid under-developed countries in such fields as co-operatives, social security, vocational training, productivity techniques and employment service organization, the ILO aids in the development of improved economic and social conditions in these areas. The ILO also administers numerous technical aid projects in developing countries on behalf of the United Nations Special Fund and the Expanded Programme of Technical Assistance (see also pp. 165-166).

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii of this volume.

The physiographic and population characteristics of Canada present unusual difficulties from the standpoint of transportation. The country extends 4,000 miles from east to west and its main topographic barriers run in a north-south direction, so that sections of the country are cut off from one another by such water barriers as Cabot Strait and the Strait of Belle Isle separating the Island of Newfoundland from the mainland; by rough, rocky forest terrain such as the New Brunswick-Quebec border region and the areas north of Lakes Huron and Superior dividing the industrial region of Ontario and Quebec from the agricultural areas of the Prairie Provinces; and by the mountain barriers between the prairies and the Pacific Coast. Unevenly distributed along a narrow southern strip of Canada's vast area is its relatively small population of 19,571,000 (estimate of June 1, 1965). To such a country, with a population so dispersed and producing for export as well as for consumption in distant parts of the country itself, efficient and economical transportation facilities are necessities of existence.

A special article giving some idea of the competitive problems that have faced the major agencies of transport during recent years of economic and technological change appears in the 1962 Year Book at pp. 753-758. Also, a special article on operational and technological changes in rail transport appears in the 1965 edition at pp. 755-761.

PART I.—GOVERNMENT CONTROL OVER AGENCIES OF TRANSPORTATION

The Federal Government's control and regulation of transportation reflect to a considerable extent conditions that date back to the period when the railways possessed a virtual monopoly of transportation within the country. Although federal regulation was

a direct outcome of such particular matters as the prevention of unjust discrimination in rates and charges resulting from monopoly conditions in the industry and the safety of transportation facilities and operating practices, yet the railways have been so involved in the public interest that their regulation has been extended to become the most comprehensive of any industry in Canada.

In the meantime, conditions in the transportation industry have been drastically altered by the increasing competition arising from the advance of highway, air and pipeline transportation and a large part of the present competition between common carriers has become a permanent feature of the transportation industry. In these circumstances, it is not surprising that regulations, which under monopoly conditions were not onerous to the railways or were purely nominal in their effect, are now alleged to have become increasingly restrictive and hampering under highly competitive conditions. Regulatory authorities are therefore faced with the problem of piecemeal revision of their regulations—retaining those where railway monopoly or near-monopoly conditions still make them necessary in the public interest, and relaxing those where competition can be relied on to protect the public in order to enable the railways to meet this competition more effectively. The emphasis has shifted from the regulation of monopoly to maintaining a balance between the several competing modes of transport.

The federal Department of Transport and the Crown agencies reporting to Parliament through the Minister of Transport have jurisdiction over railways, canals, harbours, shipping and civil aviation (see p. 128). Road and highway development is mainly under provincial or municipal control or supervision. Jurisdiction over interprovincial and international highway transport rests with the Federal Government, but the Motor Vehicle Transport Act, 1954 gives to all provinces, at their option, the authority to apply to interprovincial and international highway transport the same regulations respecting certificates of public convenience and necessity and rates as they apply to undertakings operating entirely within the province. This Act has since been proclaimed in all provinces except Newfoundland.

The Board of Transport Commissioners for Canada.—The Board of Transport Commissioners for Canada was created and initially named the Board of Railway Commissioners for Canada by the Railway Act, 1903, and was given its present name by the Transport Act, 1938. It was organized on Feb. 1, 1904 and succeeded to all the powers and duties of its predecessor, the Railway Committee of the Privy Council. The Board, now consisting of a Chief Commissioner, a Deputy Chief Commissioner, an Assistant Chief Commissioner and three Commissioners, has extensive regulative and administrative powers and is also a statutory court of record, so constituted by the Railway Act and recognized as such by other courts. The finding or determination of the Board upon any question of fact within its jurisdiction is binding and conclusive and no order or decision may be questioned or reviewed except on appeal to the Supreme Court of Canada upon a question of law or a question of jurisdiction with leave of a judge of that Court, or by the Governor in Council.*

The Board has jurisdiction under more than a score of Acts of Parliament, including jurisdiction, under the Railway Act and the Transport Act, over transportation by railway and by inland water, and over communication by telephone and telegraph.

Under the Railway Act its jurisdiction is, stated generally, in respect of construction, maintenance and operation of railways that are subject to the legislative authority of the

* The Board's judgments are reported in *Canadian Railway Cases* and *Canadian Railway and Transport Cases*, and its judgments, orders, rulings and regulations are published by the Queen's Printer, Ottawa, in what is known as *J.O.R. & R.*

Parliament of Canada, including matters of engineering, location of lines, crossings and crossing protection, safety of train operation, operating rules, investigation of accidents, accommodation for traffic and facilities for service, abandonment of operation, freight and passenger rates, and uniformity of railway accounting. The Board also has certain jurisdiction over telephones and telegraphs, including regulation of the telephone tolls of The Bell Telephone Company of Canada, the British Columbia Telephone Company, the Bonaventure and Gaspé Telephone Company and the Yellowknife Telephone Company, and over tolls for express traffic and for the use of international bridges and tunnels.

Regulation of railway freight and passenger rates is one of the Board's principal tasks. Except for certain statutory rates, it has power "to fix, determine and enforce just and reasonable rates, and to change and alter rates as changing conditions or cost of transportation may from time to time require"; it may disallow any tariff that it considers to be unjust or unreasonable or contrary to any provision of the Railway Act; it may prescribe other tolls in lieu of the tolls disallowed, or require the railway company to substitute a tariff satisfactory to the Board. During the past decade there has been a succession of applications for authority to make general freight rate increases and general telephone rate increases.

Under the Transport Act, the Board entertains applications for licences for ships to transport goods or passengers for hire or reward between places in Canada on the Great Lakes and the Mackenzie and Yukon Rivers, except goods in bulk on waters other than the Mackenzie River. Before granting a licence, the Board must be satisfied that public convenience and necessity require such transport. The Board also has regulative powers over tolls for such transport.

A review of transport regulation was undertaken by the Royal Commission on Transportation, under the chairmanship of the Hon. W. F. A. Turgeon, which held extensive hearings in 1949-50 and issued its Report in 1951 (see 1952-53 Year Book, p. 741). Certain of its recommendations were incorporated into the Railway Act by amendments made in 1951 (see 1962 Year Book, p. 760).

A Royal Commission was appointed May 13, 1959 with the Hon. C. P. McTague named as chairman (later succeeded by M. A. MacPherson) to inquire into the railway rate structure and other matters affecting transportation. Its findings were published in three volumes, which appeared between March 1961 and July 1962. Pending the results of this inquiry, the enactment of the Freight Rates Reduction Act, 1959 and later amendments gave some relief to shippers by providing the finances necessary to permit the reduction of freight rates and the payment of compensation to the railways for maintenance of their rates on freight traffic at the reduced levels (see 1963-64 Year Book, pp. 752-753). Legislation based on the findings of the MacPherson Royal Commission was still before the House of Commons in December 1965.

The Air Transport Board.—The Air Transport Board was established in September 1944 by amendment to the Aeronautics Act. Subsequent amendments to the Act were made in 1945, 1950 and 1952. The Board has three members including the Chairman and Vice Chairman and the staff is comprised of a Senior Adviser; a Legal Branch; an Operations Branch which includes a Traffic Division, an Operations Analyst, an International Relations Division, and a Licensing and Inspection Division; an Economics and Accounting Branch which includes an Economics Division, an Audit Division and a Financial Analyst; and a Secretary's Branch which includes an Administrative Division.

The Board is responsible for the economic regulation of commercial air services in Canada and is also required to advise the Minister of Transport in the exercise of his duties and powers in all matters relating to civil aviation. The regulatory function relates to Canadian air services within Canada and abroad and to foreign air services operating into and out of Canada. It involves the licensing of all such services and the subsequent regulation of the licensees in respect of their economic operation and the provision of service to the public. As provided by the Act, the Board issues Regulations, approved by the Governor in Council, dealing with the classification of air carriers and commercial air services, applications for licences to operate commercial air services, accounts, records and reports, ownership, transfers, consolidations, mergers and leases of commercial air services, traffic tolls and tariffs, and other related matters. Detailed regulatory instructions are issued by the Board in the form of General Orders and Rules relating to all air services or groups of air services; Board Orders relating to individual air services; and Circulars for general guidance and information. The Board continues to work toward the consolidation of its over-all regulations and the procedures governing applications for licence are being examined for improved processing methods.

The Board takes an active part in the work of the International Civil Aviation Organization and, when appropriate, undertakes bilateral negotiations for the exchange of traffic rights. At present, Air Canada, Canadian Pacific Airlines Limited and TransAir Limited are Canada's designated international scheduled carriers although the latter does not operate as such.

The Canadian Maritime Commission.—The Canadian Maritime Commission was established by Act of Parliament in 1947 (RSC 1952, c. 38) as a separate department of the Government reporting to Parliament through the Minister of Transport. It is the function of the Commission to "consider and recommend to the Minister from time to time such policies and measures as it considers necessary for the operation, maintenance, manning and development of a merchant marine and a ship-building and ship-repairing industry commensurate with Canadian maritime needs". The Commission is authorized to examine into, ascertain and keep records of all phases of ship operation and to "administer, in accordance with regulations of the Governor in Council, any steamship subventions voted by Parliament".

The Commission administers the Ship Construction Assistance Regulations enacted by Order in Council PC 1961-1290 of Sept. 8, 1961, as amended. The Regulations authorize the payment of direct subsidies for the construction of commercial ships and fishing vessels in Canadian shipyards. The Commission also administers the Canadian Vessel Construction Assistance Act (RSC 1952, c. 43) which allows shipowners to benefit from accelerated depreciation and, under given circumstances, from tax relief.

Subsidies are paid by the Federal Government for the maintenance of essential steamship services; the services and the amounts paid for the years ended Mar. 31, 1964 and 1965 are given on pp. 808-809.

The National Energy Board.—The National Energy Act (SC 1959, c. 46) proclaimed Nov. 1, 1959, provided for the establishment of a five-member Board charged with the duty of assuring the best use of energy resources in Canada. In the performance of this function, the Board is responsible for the regulation of the construction and operation of the oil and gas pipelines that are under the jurisdiction of the Parliament of Canada, the tolls charged for transmission by oil and gas pipeline, the export and import of gas and the export of electric power, and the construction of the lines over which such power is transmitted. The functions and operations of the Board are covered in the Domestic Trade and Prices Chapter of this volume, Part II, Section 4.

PART II.—RAIL TRANSPORT*

Section 1.—Railways†

Since Confederation the railways of Canada have been the principal transport facility throughout, and beyond, the nation. The two great transcontinental systems, supplemented by a major north-south line on the West Coast and a number of regional independent railways, are the only carriers able to transport large volumes of freight at low cost in all weather by continuous passage over Canadian transcontinental routes.

The two national railway companies control a wide variety of Canadian and international transport and communications services. The government-owned Canadian National Railway System is the country's largest public utility and operates the greatest length of trackage in Canada. It is the only railway serving all ten provinces and has completed a branch line to serve the Great Slave Lake area of the Northwest Territories. In addition, it operates a highway service, a fleet of coastal steamships, an extensive express service, a chain of large hotels and resorts, and a scheduled air service connecting all major cities across the country and Canadian with other North American and European points. The Canadian National, jointly with the Canadian Pacific Railway Company, operates a national telecommunications system that employs modern microwave, high-speed teletype and private wire networks, telex, data and weather facsimile transmission and movement of telegrams to any point in the world. The Canadian Pacific Railway Company is a joint-stock corporation also operating a transcontinental railway, an express service, a domestic truck and bus network, a fleet of inland, coastal and ocean-going vessels, a chain of year-round and resort hotels, a domestic airline servicing points in British Columbia, Alberta and Yukon Territory, a transpacific airline service to the Orient and the Antipodes, air services to Mexico, Peru, Chile and Argentina, a transpolar air route connecting Vancouver and Amsterdam, a transatlantic service to Portugal, Spain and Italy, and a limited (one flight daily) transcontinental air service between Vancouver and Montreal.

The Pacific Great Eastern Railway, owned by the British Columbia Government, operates over a 789.5-mile route from North Vancouver to Fort St. John in the Peace River area of northeastern British Columbia, with a branch line from Chetwynd to Dawson Creek. The completion in 1958 of the northern section of this line opened up to development the vast interior of the province and brought to an end the largest railway construction job undertaken in North America for two decades. The PGE was the first railway on the Continent to be operated entirely by means of radio communication. Several northern extensions of this line are under construction or are in the planning stage.

Subsection 1.—Milage and Equipment

Construction was begun in 1835 on the first railway in Canada—the short link of 14.5 miles between Laprairie and St. Johns, Que.—but only 66 miles were in operation by 1850. The first great period of construction was in the 1850's when the Grand Trunk and the Great Western Railways were built as well as numerous smaller lines. The building of the Intercolonial and the Canadian Pacific railways contributed to another period of rapid expansion in the 1870's and 1880's. In the last period of extensive railway building (1900-17), the Grand Trunk Pacific, National Transcontinental and Canadian Northern Railways were constructed.

There has been little change in total track milage since the 1920's. The milage peak was reached in 1959 and there has since been a gradual decline, new construction being more than offset by abandonment of unprofitable lines. In recent years, the development of a number of large projects in districts far removed from transport facilities and the opening up of the Northwest Territories have necessitated the building of branch lines. Those completed up to 1956 are listed in the 1957-58 Year Book, p. 815, and those completed

* The statistical data in this Part were revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics; more detailed information is given in the annual reports of the Division.

† A special article on operational and technological changes in rail transport appears in the 1965 Year Book at pp. 755-761.

from that year to 1963 are mentioned in subsequent editions. During 1964, the CNR completed construction of the 430-mile Great Slave Lake Railway which extends 377 miles from Roma, near Grinshaw, in Alberta to Hay River in the Northwest Territories with a 53-mile branch line to Pine Point mines. Also completed by the CNR was a 15-mile line from Nepisiquit Junction to the property of Brunswick Mining and Smelting Corporation in New Brunswick. In October 1965, announcement was made of the construction of a 100-mile railway in northwestern Alberta, extending northwesterly from a point on the CNR main line west of Hinton to the rich resources area of Smoky River. Construction will be financed by an Alberta Crown corporation but supervised by the CNR. The line will be completed by the end of 1967 and will be leased to the CNR for operation on a tonnage-rental basis. The 78-mile Fort St. James extension of the Pacific Great Eastern Railway in British Columbia was nearing completion in late 1965 and an additional 64-mile extension to Takla Lake was in the survey stage; surveying was completed on a 21-mile extension from Kennedy to Morfee Lake and on a 50-mile extension from Fort St. John to Beaton River, the latter being the first step of a projected 200-mile line running northwest to Fort Nelson.

1.—Railway Track Mileage Operated, 1900-64

NOTE.—Figures of total mileage of first main track operated for 1835-1909 are given in the 1941 Year Book, p. 546; for 1911-14 in the 1954 edition, p. 786; for 1916-24 in the 1955 edition, p. 830; and for 1926-49 in the 1956 edition, p. 792.

61 miles in 1963 and 58 miles in 1964.

² Excludes joint track amounting to 53 miles in 1961, 55 miles in 1962,

Rolling-Stock.—Table 2 shows the numbers of the various types of freight and passenger equipment in operation in 1959 and in 1964, revealing a generally downward trend over the period; however, these figures do not reflect the offsetting trend toward larger, more efficient cars and locomotives or the steady improvement in speed of movement facilitated by modernized handling and terminal services. Each year hundreds of units, particularly freight cars, are converted and modified to make them suitable for specific types of traffic or are replaced by special-purpose equipment designed for distinctive hauling jobs. The average capacity of all freight cars was 53.3 tons in 1964 compared with 51.1 tons in 1959. Also, although the number of diesel-electric locomotives in service has remained

fairly static over this period, it should be noted than an extensive program of power up-grading has been followed by the railway companies. The combined tractive effort (the force exerted by powered equipment measured at the rim of the driving wheels) of all locomotives in 1964 averaged 58,216 lb. as compared with 53,368 lb. in 1959.

¹ Includes express, baggage, mail and other cars.

² Duplications included.

³ Includes caboose

miles but excludes miles made in passenger and non-revenue trains.

⁴ Excludes traffic handled by more than one railway; see Table 4 for details of freight carried.

The total tonnage of revenue freight carried (including national loadings and receipts from United States rail connections) was 10.5 p.c. higher in 1964 than in 1963. All the main commodity groups showed increases over the previous year. Of the 189,696,385 tons carried in 1964 (excluding freight handled by more than one railway and in intermediate switching), mine products accounted for 39.7 p.c., manufactures and miscellaneous products for 30.8 p.c., agricultural products 18.8 p.c., forest products 9.3 p.c., animal products 0.9 p.c., and less-than-carload freight for 0.5 p.c.; in 1963 the proportions were 41.8 p.c., 30.3 p.c., 17.1 p.c., 9.3 p.c., 0.9 p.c. and 0.6 p.c., respectively.

4.—Commodities Hauled as Freight by Railways, 1960-64

NOTE.—In this table duplications are eliminated, i.e., the same freight handled by two or more railways is counted only once. The statistics do not include the United States lines of the Canadian National Railways, but the link of the Canadian Pacific Railway line across Maine, U.S.A., is included, as are the Canadian sections of United States railways.

Railway Accidents.—Accidents shown in Table 5 include all those in which railway trains were involved and accidents on railway property; all passengers injured are included but, for employees, only those who were kept from work for at least three days during the

10 days following the accident are recorded. The classification of accidents used in reporting other DBS statistics treats collisions between motor vehicles and trains as motor vehicle accidents. Therefore, care should be exercised when compiling total accidental deaths of all kinds or when comparing results of accidents of different kinds, such as train and motor vehicle.

Subsection 3.—Finances

The tables in this Subsection give information on capital liability and capital investment, earnings, operating expenses, employees and their earnings and government aid to all railways.* Financial statistics of government-owned railways are given separately and in detail in Subsection 4. A Uniform Classification of Accounts for common carriers became effective for the Canadian National and the Canadian Pacific Railways on Jan. 1, 1956, and for all other common carrier railways on Jan. 1, 1957. In transportation statistics a distinction is made between expenditures and expenses. In this Subsection, the term 'expenses' is used as defined in the Uniform Classification of Accounts and refers to the expenses of furnishing rail transportation service and of operations incident thereto, including maintenance and depreciation of the plant used in such service.

Capital Liability and Investment.—The capital liability of railways operating in Canada for the years 1955 to 1964 is shown in Table 6. The increase of \$22,001,955 in 1964 over 1963 compares with an increase in investment in road and equipment property of \$813,602 as shown in Table 7.

* Statistics for individual railways are given in DBS annual report *Railway Transport*, published in six parts (Catalogue Nos. 52-207—52-212).

6.—Capital Liability of Railways, 1955-64

NOTE.—Figures from 1876 will be found in the corresponding table of previous Year Books beginning with the 1927-28 edition.

Revenues and Expenses.—Both operating revenues and expenses of railways operating in Canada reached peak levels in 1964. Increases over 1963 amounted to 9.4 p.c. and 8.0 p.c., respectively, and because the increase was greater in revenues than in expenses an improvement in net earnings resulted. Accelerated economic activity throughout the country in 1964 was reflected in increased traffic and both freight-train revenue per freight-train mile and passenger-train revenue per passenger-train mile were the highest on record.

8.—Operating Revenues and Expenses of Railways, 1955-64

NOTE.—Operating revenues and expenses from 1875 are given in previous editions of the Year Book beginning with the 1916-17 edition.

¹ Excludes equipment rents, joint facility rents and tax accruals.

Of the total operating expenses in 1964, amounting to \$1,241,258,655, those connected with the transporting of persons and property, such as station, yard and terminal services and employees, wharves, fuel, etc., accounted for 37.7 p.c.; equipment maintenance accounted for 22.3 p.c.; road maintenance for 20.1 p.c.; rents and taxes for 6.8 p.c.; expenses connected with traffic soliciting, such as advertising and information, ticket and freight offices, etc., for 2.6 p.c.; and miscellaneous expenses, including incidentals, dining and buffet services, grain elevators, etc., for the remaining 10.5 p.c. These proportions have remained fairly constant in recent years.

Employment, Salaries and Wages.—Rail employment in 1964 was slightly higher than in the preceding year but was still nearly 27 p.c. lower than the high point of 1956. Over the ten-year period 1955-64, employment dropped 13.5 p.c. but the average annual salary for the industry was 46.7 p.c. higher and total compensation paid was up 18.3 p.c. The 1964 increase in rail employment over 1963 is no doubt attributable to operational and traffic trends in the industry, which followed closely the course of other indicators of economic activity. Also, it should be noted that employee data for 1964 were based on a new Uniform Canadian Classification of Railway Employees in which a bi-monthly method of counting was introduced. This method tends to reduce the number of employees by from 2 p.c. to 3 p.c. For details see DBS publication *Railway Transport, Part VI* (Catalogue No. 52-212).

9.—Railway Employees and Their Earnings, 1955-64

NOTE.—Figures include employees and wages for 'outside' operations amounting to from 3 to 6 p.c. of total employees and from 2 to 5 p.c. of total salaries and wages. Figures for 1912-39 are given in the 1941 Year Book, p. 551; for 1940-49 in the 1951 edition, p. 723; and for 1950-54 in the 1961 edition, p. 785.

¹ Includes employees engaged in communications, express cartage, highway transport (rail) and outside operations.

Subsection 4.—The Canadian National Railway System*

In view of the interest in Canada's publicly owned railway, the Canadian National Railway System is given separate treatment in this Subsection. More detailed information than can be given here is obtainable from DBS annual report *Canadian National Railways* (Catalogue No. 52-201).

Financial Statistics.—The original financial structure of the CNR and the steps taken through the Capital Revision Acts of 1937 and 1952 to alleviate the burden of interest debt undertaken by the company on its formation in 1923 are described in the 1955 Year Book, pp. 840-847. Briefly, the Capital Revision Act of 1937 wrote off all loans that had been made to cover deficits and also unpaid interest on loans, and certain loans made for the purpose of additions and betterments were converted to equity capital, relieving the CNR from paying fixed charges on this amount. Under the 1952 Capital Revision Act, 50 p.c. of the company's interest-bearing debt was changed to preferred stock on which, after settling income taxes, a dividend of 4 p.c. is paid on earnings. Also, for a term of ten years ended Jan. 1, 1962, the Railway was not obliged to pay interest on \$100,000,000 of its long-term debt. The Government is authorized to buy additional preferred stock annually in amounts related to the company's gross revenues. As a consequence, the proportion of total capitalization represented by equity capital in shareholders' account was raised from 34.5 p.c. at Dec. 31, 1951 to 67.2 p.c. at Jan. 1, 1952, and the proportion of borrowed capital was correspondingly reduced. By the end of 1964, the proportion represented by equity capital in shareholders' account was 50.5 p.c.

* The Hudson Bay Railway, formerly managed and operated for the Federal Government by the CNR, was absorbed into the Canadian National Railway System on Jan. 1, 1953, to be operated in the same manner as other Canadian Government railway lines. Statistics of the Hudson Bay Railway are therefore included with CNR data for 1958 and subsequent years.

The financial details presented in Table 12 are those of the entire Canadian National Railway System, including both Canadian and United States operations. Revenues and expenses include those of express and commercial communications throughout, and high-way transport (rail) operations from 1956. In conformity with the requirements of the Uniform Classification of Accounts, tax accruals and rents have been charged to operating expenses since Jan. 1, 1956.

12.—Total Revenue, Operating Expenses, Net Revenue, Fixed Charges and Deficits of the Canadian National Railway System (Canadian and United States Operations), 1955-64

NOTE.—Figures for 1911-54 are given in the corresponding table of previous Year Books beginning with the 1936 edition.

Section 2.—Express Companies

There are five express organizations operating in Canada. The Canadian Pacific Express exists as a subsidiary of the Canadian Pacific Railway Company, and the express business of the Algoma Central and Hudson Bay Railway, the Canadian National Railway System and the Northern Alberta Railways Company is handled by departments of the respective railways. The Railway Express Agency Incorporated of the United States operates mainly over the Canadian sections of U.S. rail lines.

Express companies are organized under federal legislative authority. They are primarily engaged in the rapid transportation of package freight but their services also include custom brokerage, money orders, travellers cheques and other financial paper transactions. Recently, the major railways have introduced a unified service for handling small package express freight and less-than-carload-lot shipments, using the efficient facilities of their rail, piggyback and highway transport services to provide fast and competitive movement of goods.

No statistics are available on the volume of express freight handled because much of it consists of parcels and small lots which cannot be classified. Table 14 shows the milages operated by and the financial statistics of the express agencies for 1960-64, with figures by company for 1964.

14.—Summary Statistics of Express Companies, 1960-64

NOTE.—Figures from 1911 are given in the corresponding table of previous Year Books beginning with the 1927-28 edition.

Year or Company	Milages Operated in Canada ¹	Gross Earnings	Operating Expenses ²	Express Privileges ³	Net Operating Revenue

¹ Over railways, boat lines, motor carrier and aircraft routes.

² Includes tax accruals from 1956 in accordance with the Uniform Classification of Accounts adopted Jan. 1, 1956.

³ Amounts paid by express companies to the carriers, i.e., railways, steamship lines, etc., for transporting express matter.

⁴ Excludes an estimated 10,040 airline miles over which express services are provided.

Business transacted by express companies in financial paper is showing a downward trend, declining from \$146,029,950 in 1960 to \$134,895,194 in 1964. The 1964 total was made up of: domestic and foreign money orders, \$106,997,022; C.O.D. cheques, \$17,639,941; travellers cheques, \$10,214,133; and telegraphic transfers, \$44,098. The major decrease was shown in the amount of money orders issued.

The number of persons employed by express companies has also decreased over the five-year period. Employment (full-time and part-time) was provided for 7,346 persons in 1964, to whom \$32,398,891 was paid in salaries and wages; this compared with 10,733 employees in 1960, receiving \$40,206,239 in salaries and wages. Commissions paid dropped from \$2,736,817 to \$2,233,255 over the same period.

Government Aid to Railways.—In order that the private railways of Canada might be constructed in advance of settlement as colonization roads or through sparsely settled districts where little traffic was available, it was necessary for federal and provincial governments and even for municipalities to extend some form of assistance. The form of aid was usually a bonus of a fixed amount for each mile of railway constructed and, in the early days, grants of land were also made other than for right-of-way. As the country developed, objections to the land-grant method became increasingly apparent and aid was given more frequently in the form of a cash subsidy for each mile of line, a loan or a subscription to the shares of the railway. Guarantees of debenture issues were given in a later period and, since the formation of the Canadian National Railways, all debenture issues of that System, except those for rolling-stock, have been guaranteed by the Federal Government.

During the era of railway expansion before 1918, provincial governments guaranteed the bonds of some railway lines that afterwards were incorporated in the Canadian National Railway System. These bonds as they mature or are called are paid off by the Canadian National Railways, in large measure through funds raised by the issue of new bonds with Federal Government guarantee. Railway bonds guaranteed by the Government of Canada at Dec. 31, 1964 amounted to \$1,367,811,500.

For some years the Federal Government has been assisting shippers by bearing a portion of rail transportation costs on certain types of traffic moving between and within specific areas of Canada. Reimbursement to the railways for diminution of revenue resulting from these reductions has been provided through four principal plans: the Freight Rates Reduction Act (SC 1959, c. 27), which reduces for shippers, on certain classes of traffic, the full effect of the last freight rate increase authorized by the Board of Transport Commissioners for Canada in 1958; the East-West Bridge Subsidy, which provides reduced rates to shippers on certain traffic moving between Eastern and Western Canada; the Maritime Freight Rates Act (RSC 1952, c. 174), which reduces rates to shippers on traffic moving within and out of the Atlantic Provinces; and interim payments related to recommendations of the MacPherson Royal Commission. (See also p. 758.)

PART III.—ROAD TRANSPORT*

Highways and motor vehicles are herein treated as related features of transportation. An introductory Section summarizes provincial regulations regarding motor vehicles and motor traffic.

Section 1.—Provincial Motor Vehicle and Traffic Regulations†

NOTE.—It is obviously impossible to include here the great mass of detailed regulations in force in each province and territory; only the more important general information is given. The source of information for detailed regulations for each province and territory is given at pp. 773-774.

The registration of motor vehicles and the regulation of motor vehicle traffic lies within the legislative jurisdiction of the provincial and territorial governments. Regulations common to all provinces and territories are summarized as follows.

Operators' Licences.—The operator of a motor vehicle must be over a specified age, usually 16 years (17 in Newfoundland and 18 for class A licence in Alberta), and must carry a licence, obtainable in most provinces only after prescribed qualification tests. Such licence is renewable annually in Newfoundland, Prince Edward Island, Nova Scotia and Saskatchewan; in Alberta and British Columbia it is renewable every five years; in New Brunswick, Quebec and Manitoba it is renewable every two years and, in Quebec, expires on the licensee's birth date; in Ontario a licence is issued on a three-year basis and expires

* Except as otherwise indicated, the material in this Part has been revised in the Transportation Section, Public Finance and Transportation Division, Dominion Bureau of Statistics.

† Revised according to information received from the respective provincial authorities concerned.

on the licensee's birth date. Special licences are required for chauffeurs in all provinces except Newfoundland and in some jurisdictions special licences may be granted to those who have not reached the specified age.

Motor Vehicle Regulations.—All motor vehicles and trailers must be registered annually, with the payment of specified fees, and must carry two registration plates, one on the front and one on the back of the vehicle (one only for the back of trailers); in New Brunswick and Prince Edward Island one licence plate is issued to be attached to the front of truck tractors and to the rear of all other vehicles. In most provinces, in event of sale the registration plates stay with the vehicle but in Quebec, Manitoba, Saskatchewan and Alberta the plates are retained by the owner. In Nova Scotia, vehicles pass from owner to owner by due process of law and title must be secured before issue of plates and permit. A change of ownership of the vehicle must be recorded with the registration authority. However, exemption from registration is granted for a specified period (usually at least 90 days, except in Quebec where the maximum is 90 days, in British Columbia where it is six months and in Ontario where it is six months for vehicles from other provinces and three months for vehicles registered outside Canada) in any year to visitors' private vehicles registered in another province or a state that grants reciprocal treatment. Regulations require a safe standard of efficiency in the mechanism of the vehicle and of its brakes and stipulate that equipment include non-glare headlights, a proper rear light, a muffler, a windshield wiper, a rear-vision mirror, and a warning device.

Traffic Regulations.—In all provinces and territories, vehicles keep to the right-hand side of the road. Everywhere motorists are required to observe traffic signs, lights, etc., placed at strategic points on highways and roads. The speed limit in Prince Edward Island, New Brunswick and Quebec is 60 miles an hour in daytime and 55 at night; in Manitoba and Alberta it is 60 in daytime and 50 at night, with the exception of a few selected sections of four-lane highway in Alberta where maximum speeds in excess of the foregoing may be authorized and posted. In Nova Scotia the limit is a "reasonable and prudent" speed, with a maximum of 60 miles an hour except where 65 miles an hour is authorized. In Ontario maximum speeds vary from 50 to 60 miles an hour, depending on type of highway. In the other provinces the maximum speed permitted is normally 50 miles an hour; in Saskatchewan and British Columbia where higher speed limits are in effect they are posted. Slower speeds are always required in cities, towns and villages, when passing schools and public playgrounds, at road intersections, railway crossings or at other places or times where the view of the highway for a safe distance ahead is in any way obscured. In almost all provinces, truck speed limits are at least five miles an hour below automobile speed limits. In all provinces and territories, accidents resulting in personal injury or property damage of \$100 or more must be reported to a police officer (in Nova Scotia to the Registrar of Motor Vehicles or to a police officer; in Quebec to the Motor Vehicle Bureau) and a driver involved must not leave the scene of an accident until he has rendered all possible aid and disclosed his name to the injured party.

Driver Licensing Controls.—All provinces impose penalties for infractions of driving regulations, ranging from fines for minor infractions to suspension of the operator's driving permit, impounding of the car, or imprisonment for more serious infractions. In most provinces penalties have been linked to a driver-improvement program, the aim of which is to correct faulty driving habits, not to take drivers off the road. The most common driver-improvement program includes the demerit-point-system.

Safety Responsibility Legislation.—Each province has enacted legislation under this heading (sometimes referred to as financial responsibility legislation). In general, these laws provide for the automatic suspension of the driver's licence and motor vehicle permit of a person convicted of a serious offence (impaired driving, driving under suspension, etc.) or a person involved directly or indirectly in an accident who is not covered for third-party insurance at the time of the accident. The suspension remains effective until any

penalty or judgment has been satisfied and proof of financial responsibility for the future is filed. In Quebec, Saskatchewan and the Yukon Territory, uninsured motor vehicles may be impounded following an accident of any consequence, i.e., an accident resulting in personal injury or death, or property damage in excess of \$100 (\$200 in Saskatchewan). In Ontario, the non-resident motorist is not required to carry or produce any form of proof of insurance.

Although safety responsibility legislation has not been enacted in the Northwest Territories, under present requirements the owner of a motor vehicle resident in the Mackenzie Highway region must submit evidence of stipulated insurance coverage on such vehicle before he can obtain registration. In the Yukon Territory, proof of insurance must be supplied before vehicle licence is issued. When the insurance expires or is cancelled, vehicle licence plates must be returned to the Registrar of Motor Vehicles.

Unsatisfied Judgment Fund.—Legislation has been enacted in all provinces except in Saskatchewan and in the Yukon and Northwest Territories, usually in the form of an amendment to the motor vehicle laws of the province or territory, providing for the establishment of a fund, frequently called an Unsatisfied Judgment Fund, out of which are paid judgments awarded for damages arising out of motor vehicle accidents in the province which cannot be collected in the ordinary process of law. In Newfoundland, Prince Edward Island, Nova Scotia, Quebec and British Columbia the fund is maintained by insurance companies. In all the other provinces, except Saskatchewan where insurance is compulsory, the funds are obtained by the annual collection of a fee from the registered owner of every motor vehicle or from every person to whom a driver's licence is issued. The fee does not exceed \$1 per annum except that Ontario and Alberta collect \$20 from each uninsured owner of a motor vehicle at the time of registration or transfer and Manitoba collects an additional \$25 from each uninsured owner at the time of registration. A feature of this legislation, which is contained in some provincial statutes, is the provision for the payment of judgments in 'hit-and-run' accidents. When these occur, if neither the owner nor the driver can be identified, action may be taken against the Registrar of Motor Vehicles (the Minister of Finance in Newfoundland and the Administrator of the Motor Vehicles Accident Claim Fund in Alberta); any judgment secured against the responsible authority is paid out of the Fund. All of these laws contain a provision limiting the amount that can be paid out of the Fund on one judgment. In Newfoundland and Nova Scotia, the limits are \$10,000 for one person, \$20,000 for two or more persons injured in one accident and \$5,000 for property damage. In Nova Scotia and New Brunswick the limit is \$35,000 in respect of any one accident. In Prince Edward Island and Quebec the limit is \$35,000 for all damages in the same accident, subject to a deduction of \$200 from all damage to the property of others; damages resulting in bodily injury or death are, up to \$30,000, payable by priority over damages to property and the latter are, up to \$5,000, payable by priority over the former out of the amount of any insurance or other guarantee of indemnity. In British Columbia, the limit is based on the single amount of \$35,000 for any one accident with the proviso that not more than \$5,000 may be paid on a property damage claim until injury claims up to \$30,000 have been satisfied; the \$35,000 limit exists for hit-and-run accidents but does not apply to payments for property damage. In Ontario and Alberta, the limits are \$35,000 for death or personal injury to one or more persons and \$5,000 for damage to property, subject to a limit of \$35,000 in any one accident. In Manitoba, the limit based on one accident is \$35,000 for claims for injury or property damage with the stipulation that not more than \$5,000 may be allocated to property damage until injury claims up to \$30,000 have been satisfied. In other provinces, lower limits of \$5,000, \$10,000 and \$1,000 are retained. For hit-and-run accidents payments are made for personal injuries only.

Sources of information on provincial motor vehicle and traffic regulations:—

Newfoundland

Administration.—The Minister of Finance, St. John's.

Legislation.—The Highway Traffic Act, 1962.

Prince Edward Island

Administration.—The Provincial Secretary, Charlottetown.

Legislation.—The Highway Traffic Act (SPEI 1964, c. 14).

Nova Scotia

Administration.—Registry of Motor Vehicles, Department of Highways, Halifax.

Legislation.—The Motor Vehicle Act (1954, c. 184, as amended) and the Motor Carrier Act (1958, c. 7, as amended).

New Brunswick

Administration.—Motor Vehicle Branch, Department of Provincial Secretary, Fredericton.

Legislation.—The Motor Vehicle Act (RSNB 1955, as amended).

Quebec

Administration.—Motor Vehicle Bureau, Department of Transportation and Communications, Parliament Bldgs., Quebec.

Legislation.—The Highway Code (RSQ 1941, c. 142 and 142A, as amended).

Ontario

Administration.—Ontario Department of Transport, Toronto.

Legislation.—The Highway Traffic Act (RSO 1960, c. 172, as amended), the Public Vehicles Act (RSO 1960, c. 337, as amended), the Public Commercial Vehicles Act (RSO 1960, c. 319, as amended) and the Motor Vehicle Accident Claims Act (1961-62, c. 84, as amended).

Manitoba

Administration.—Minister of Public Utilities, Winnipeg.

Legislation.—The Highway Traffic Act (RSM 1954, c. 112, as amended).

Saskatchewan

Administration.—Highway Traffic Board, Revenue Building, Regina.

Legislation.—The Vehicles Act, 1957.

Alberta

Administration and Legislation.—The Vehicles and Highway Traffic Act (RSA 1955, c. 356) and the Motor Vehicle Accident Claims Act (SA 1964, c. 56) are administered by the Motor Vehicle Branch, Department of Highways, Edmonton. The Public Service Vehicles Act (RSA 1955, c. 265) and the Rules and Regulations are administered by virtue of authority vested in the Highway Traffic Board, Department of Highways, Edmonton.

British Columbia

Administration and Legislation.—Enforcement of the Motor Vehicle Act, the Commercial Transport Act and the Motor Carrier Act is vested in the Royal Canadian Mounted Police and the various municipal police forces. The Motor Carrier Act is administered by the Public Utilities Commission, the Motor Vehicle Act by the Superintendent of Motor Vehicles and the Commercial Transport Act by the Minister of Commercial Transport, Victoria, B.C.

Yukon Territory

Administration.—Commissioner of the Yukon Territory, Whitehorse, Y.T. Information regarding regulations may also be obtained from the Registrar of Motor Vehicles, Government of the Yukon Territory, Whitehorse, Y.T.

Legislation.—The Motor Vehicles Ordinance (Revised Ordinances 1958, c. 77, as amended).

Northwest Territories

Administration.—Commissioner of the Northwest Territories. Address communications to the Deputy Commissioner of the Northwest Territories, 150 Kent St., Ottawa.

Legislation.—The Motor Vehicles Ordinance (Revised Ordinances of the Northwest Territories, 1956, c. 72, as amended).

Section 2.—Highways, Roads and Streets

Highways and Roads.—The populated sections of Canada are well supplied with highways and roads. Access to outlying settlements is provided to some extent by roads built by logging, pulp and paper, and mining companies, although these are not generally available for public travel. At the same time, great areas of Newfoundland, Quebec, Ontario, the Prairie Provinces, British Columbia and the Territories are very sparsely settled and are virtually without roads of any kind.

At the end of 1963, the mileage of highways and rural roads in Canada was 441,418, an increase of 5,364 miles over the 436,054 reported in 1962. The 441,418 miles include all roads under provincial jurisdiction, federal roads, and local roads under municipal jurisdiction other than the milages in census metropolitan areas and urban centres of more than 1,000 population. The latter are given separately under the heading of "Urban Streets", p. 778.

1.—Highway and Rural Road Milage classified by Type and by Province, 1963 with Totals for 1959-63

NOTE.—Excludes urban streets but includes milages under jurisdiction of rural and small urban municipalities; excludes milages of all roads on Indian reservations except those of flexible pavement.

¹ Includes federal administrative costs re Trans-Canada Highway amounting to \$201,000 in 1962-63 and \$200,000 in 1963-64.

Federal-Provincial Road Assistance Programs.—There are various programs existing between the Federal Government and the provinces relating to highway and road construction. In 1965, the co-ordination of these programs and the announcement of federal road policy was placed with the Minister of Transport. When major programs of assistance have been decided upon, responsibility for their implementation rests with the Department of Public Works.

The Trans-Canada Highway.—The original federal-provincial agreement for construction of the Trans-Canada Highway is given in outline, together with data on specifications and route across the participating provinces, in the 1951 Year Book, pp. 631-634. Construction progress and changes in legislation are reported in subsequent editions.

Under the Act, which became effective Dec. 10, 1949, agreements covering the Federal Government's participation in the cost of construction were entered into with each of the provinces. Construction standards were set and the date of completion fixed. The shortest practicable east-west route was to be designated by each province within its own borders, in agreement on terminal points with adjoining provinces, and those sections within the National Parks were to be the responsibility of the Federal Government. Later amendments to the Act increased the extent of federal financial participation and extended the period in which construction costs might be incurred under the Act to Dec. 31, 1967.

Although construction was still going on in a number of sections, the closing in 1962 of the last major gap—in the Rocky Mountains—made it possible for the first time to drive the entire length of the 4,860-mile route. The Trans-Canada Highway was officially opened on Sept. 3, 1962.

Provincial milages are approximately as follows: Newfoundland, 540; Prince Edward Island, 71; Nova Scotia, 318; New Brunswick, 390; Quebec, 399; Ontario, 1,453; Manitoba, 309; Saskatchewan, 406; Alberta, 282; and British Columbia, 552. Length through the National Parks totals 140 miles.

Up to Mar. 31, 1965, contractual commitments for new construction on the Highway amounted to \$923,818,361, of which the federal share was \$586,933,625. Federal payments to the provinces for prior, interim and new construction totalled \$489,826,337. Paving to specified standards had been completed over a distance of 3,645 miles and 779 bridges, overpasses and other structures of more than 20-foot span had been or were being constructed.

Roads to Resources and Roads in the North.—The *Roads to Resources Program* is a national undertaking designed to provide access to areas potentially rich in natural resources. Negotiations commenced in 1958 led to agreements being signed with all ten provinces that will eventually result in the construction or reconstruction of more than 4,700 miles of road. Progress of the program to Mar. 31, 1965 was as follows:—

Province	Estimated Total Cost	Value of Approved Contracts	Provincial Expenditure ¹	Federal Contribution	Total Milage	Milage Completed
	\$'000	\$'000	\$'000	\$'000	No.	No.
Newfoundland.....	16,059	19,352	10,648	4,152	330	265

NORTHERN ROADS PROGRAM

The northern road system began with the building, in 1942, of the Alaska Highway, originally a military project but now a well-travelled scenic route from which branch access roads to many points in northern British Columbia and the Yukon Territory.

Data provided by
the Department of Northern Development and National Resources.

Photos by
the National Film Board of Canada

As the statement shows, the total estimated cost in most provinces exceeds \$15,000,000, the amount sharable under the agreement, but the federal contribution to each province will remain at \$7,500,000. Private industry shares in the cost of certain roads where construction is of most direct benefit to the company concerned. In any province the program may consist of as many projects as can qualify for inclusion and for which funds are available. In most provinces, the majority of the roads being built under the program are intended for the purpose of opening up regions to primary resource development and exploration. In Prince Edward Island and Nova Scotia, on the other hand, a number of routes have been chosen for their tourist potential.

The *Development Road Program* in the Yukon Territory and the Mackenzie District of the Northwest Territories is distinct from the Roads to Resources Program in that the Federal Government is responsible for construction; in the Roads to Resources Program, the contribution of the Federal Government is wholly financial. Maintenance costs of Roads to Resources are borne by the provinces but northern roads costs are shared by the Federal and Territorial Governments on an 85-15 basis. In the Yukon Territory, approximately 1,300 miles of development roads, constructed at a cost of about \$30,000,000, were in use in 1964-65; in the Northwest Territories and Wood Buffalo National Park, about 750 miles, costing about \$29,000,000, were in use by the end of March 1965.

In late 1965, a new ten-year road-building program in the Yukon and Northwest Territories was announced by the Minister of Northern Affairs and National Resources, calling for an average expenditure of \$10,000,000 a year, an amount double the annual roads investment in the previous ten-year period. This is the first phase of a long-range 20-year roads network program which should bring all potential areas of resource development in the Territories within 200 miles of the nearest permanent road and thus gradually reduce the North's dependence on seasonal transportation for bulk shipments, reduce the cost of holding large inventories and, as the program progresses, bring the cost of living more in line with that in other parts of Canada. In addition, improved access should result in substantial growth of the tourist industry.

An immediate result of the new program is the speed-up of construction now under way on the 165-mile highway from just south of Hay River to Fort Smith. Also forming part of the new program is the 127-mile area development road being constructed from Ross River to Carmacks in Yukon Territory. This road is of special interest to tourists since it will provide a route from Watson Lake on the Alaska Highway to and through Carmacks, Dawson City, and onward to the Alaska border where it will connect with the State of Alaska Highway System.

Under the previous program, the Federal Government offered to build and pay for mine development roads where two or more companies were developing a mineralized region, and to assist with the cost of mine-access roads and tote-trails. Even so, about 10 p.c. of present exploration and development spending by private industry, which is in excess of \$25,000,000 a year, is spent merely on gaining access to properties. The more extensive road network visualized by the new program, combined with increased federal aid for certain types of access roads, will make it possible for private industry to delegate more capital to actual exploration work.

Types of roads and proportion of federal assistance under the new program are as follows:—

Permanent Access Roads—to lead from the nearest permanent road to a resource development about to produce: federal assistance may be up to two thirds of the cost but may not exceed 15 p.c. of the capital invested by a company before commercial production or exploitation.

Communication and Network Roads—to provide connecting links between the territories, the provinces, and population centres within the territories; construction and 85 p.c. of maintenance costs will be paid by the Federal Government.

Area Development Roads—to lead into resource-potential areas; construction costs will be paid by the Federal Government and maintenance shared by the Federal and Territorial Governments.

Initial Access Roads (lote trails)—low-standard winter or year-round roads to provide an established resource project with access to a network road; federal assistance may be up to 50 p.c. of the cost of the road, which will be maintained by its primary user.

Roads to Public Airports (land or water)—to connect airports with the nearest network or local road; construction and 85 p.c. of maintenance will be paid by the Federal Government.

Construction and Improvement of Trunk Highways in the Atlantic Provinces.—This program, announced in February 1965, will involve an expenditure of \$30,000,000 by the Federal Government over the next three years to be financed from special appropriations to the Atlantic Development Board.* The additional appropriations will enable the Board to continue and expand the earlier program of highway assistance announced in July 1964 when \$10,000,000 was allocated from the Atlantic Development Fund to meet pressing trunk highway needs in the Atlantic region. Under the new program the sum of \$9,000,000 will be available to each of the Provinces of Newfoundland, Nova Scotia and New Brunswick, and \$3,000,000 to Prince Edward Island. The federal contribution for any trunk highway project will be limited to 50 p.c. of the cost of that project.

Included in the program is the provision of special federal assistance to permit early commencement of construction of a new bridge crossing the St. John River at Saint John, N.B.

Urban Streets.—Information on urban streets is obtained from the local administrations of all areas with populations over 1,000, all areas located within census metropolitan areas, improvement districts over 1,000 population and rural municipalities over 15,000 population. Brief statistical data are given in Table 3; more detail may be obtained from DBS annual report *Road and Street Mileage and Expenditure* (Catalogue No. 53-201).

¹ Includes expenditures on sidewalks, footpaths, bridges and ferries.

Section 3.—Motor Vehicles

Motor Vehicle Registrations.—Registrations continue to increase year by year, a record of 6,382,033 being reached in 1964. Of that total, 5,037,861 were passenger cars—one for every 3.8 persons. Registrations by province are given in Table 4 and types of vehicles registered by province in Table 5.

* See Chapter XXIV, Section 6.

4.—Motor Vehicles Registered, by Province, 1955-64

NOTE.—Registrations given here include passenger cars, trucks, buses, motorcycles, service cars, etc., but not trailers or dealer licences. Figures for 1904-54 are given in the corresponding table of previous Year Books beginning with the 1937 edition.

¹ Includes taxis.

² Includes service cars, road tractors, etc.

³ Included with trucks.

Apparent Supply of Automobiles.—The apparent supply of automobiles in Canada in any year is computed by deducting the number exported from the sum of the production and imports. Statistics regarding retail sales and the financing of motor vehicle sales are given in Chapter XXI on Domestic Trade and Prices.

¹ Includes Armed Forces vehicles.

Provincial Government Revenue from Motor Vehicles.—The taxation of motive fuels, motor vehicles, garages, drivers, chauffeurs, etc., is an important source of provincial government revenue. In every province licences or permits duly issued by the provincial authorities are required for motor vehicles of all kinds, trailers, operators or drivers, paid chauffeurs, dealers, garages and gasoline and service stations. In 1964 the average cost per motor vehicle for operating taxes and licences was about \$130.

The more important sources from which provincial revenue from motor vehicles is derived are shown in Table 7. Motive fuel tax rates are given in the Public Finance Chapter, Section 2, Subsection 2 on Provincial Taxes; Federal Government revenue from excise and sales taxes is given in the same Chapter, Section 3, Subsection 3 on Revenue from Taxation.

¹ Includes other items not shown such as transfer of motor vehicles, garage and service station licences, and fines for infractions of motor vehicle laws. ² Included with other motor vehicles. ³ Included with miscellaneous revenues and therefore in total. ⁴ Included with passenger automobiles. ⁵ Not complete.

⁶ The marked decrease from previous year is attributable to changeover from annual to two- or three-year licence renewal basis (see p. 771).

Sales of Motive Fuels.—In order to estimate the total amount of motive fuel purchased in Canada for use in motor vehicles on public streets and highways, it has been necessary to eliminate from the total the amount of motive fuel used for other purposes. Thus, from the total or gross sales, including imports and exports, the following are subtracted to obtain net sales: tax exempt sales to the Federal Government and other consumers, exports, and sales on which refunds were paid. Net sales are thus defined as sales on which a tax or taxes have been paid in full and are considered to approximate the actual amount of motive fuel purchased in Canada for use on public streets and highways. As shown in Table 8, consumption of taxable gasoline, which is used almost entirely for automotive purposes, rose 7.6 p.c. in 1964 and net sales of diesel oil 9.0 p.c.

Motor Carriers—Freight.*—Statistics of the common carrier segment of the intercity and rural motor carrier industry have been collected on a continuing basis since 1941. However, as little capital is required to enter the trucking business, many marginal operators are associated with the industry and the large turnover and numerous changes each year have created many problems in the collection of statistics, although these are gradually being overcome. Statistics of contract carriers are available from 1958.

*Statistics are given in more detail in DBS annual report *Motor Carriers—Freight*, Part I (Catalogue No. 53-222) and Part II (Catalogue No. 53-223).

Household Goods Movers and Storage Operators.*—Statistics of household goods movers and storage operators, summarized in Table 10, were first presented separately in 1960; before that date, they were included either with motor carriers—freight or with warehousing, depending upon the predominant source of operating revenues of the companies concerned.

Passenger Buses.†—The operations of companies predominantly engaged in passenger bus service are summarized in Table 11. Data refer to the for-hire segment of the industry and only those firms engaged in intercity and rural operations and having an annual gross revenue of \$6,000 or over are covered. Operators predominantly involved in the provision of school bus service are not included nor are airport servicing and urban transit bus operators.

* Statistics are given in more detail in DBS annual report *Moving and Storage, Household Goods* (Catalogue No. 53-221).

† Statistics are given in more detail in DBS annual report *Passenger Bus Statistics* (Catalogue No. 53-215).

11.—Summary Statistics of Intercity and Rural Passenger Bus Companies, 1960-64

NOTE.—Only carriers with an annual gross revenue of \$6,000 or over are included.

Motor Transport Traffic.*—Motor transport traffic in all provinces has been surveyed on a continuing basis since 1957. Quarterly sample selections resulted in about 10 p.c. of total registrations being sampled in 1963. Each quarterly sample was spread over three survey weeks with one third of the sample being used for a seven-day period (Sunday through Saturday) per month.

Excluding vehicles that do not perform normal transportation services, such as cranes, tow trucks, road-building equipment, etc., and government vehicles, the average number of trucks licensed in Canada during 1963 was 1,001,000. Almost 30 p.c. were registered in Ontario and one half were registered in the two Provinces of Ontario and Quebec.

Although for-hire trucks amounted to only 6.1 p.c. of the total registrations, they accounted for 64.3 p.c. of the total net ton-miles performed by all commercial trucks because of the much greater distances travelled by this type of vehicle and the heavier loads carried; their average yearly milage was 24,900 compared with 7,100 for all trucks and their average load 11.0 tons compared with 5.3 tons for all trucks. The predominance of heavier vehicles in the for-hire group also explains why their milage per gallon of gasoline was only 6.0 compared with an average of 9.5 for all vehicles.

* Statistics are given in more detail in DBS annual report *Passenger Bus Statistics* (Catalogue No. 53-215).

Private intercity vehicles accounted for 20.2 p.c. of the total registrations and for 22.9 p.c. of the total net ton-miles performed; their average yearly mileage was 7,100, average load 4.5 tons, and mileage per gallon of gasoline 9.7. Private urban vehicles made up 40.3 p.c. of the total truck population but accounted for only 10.4 p.c. of the total net ton-miles performed by all vehicles. Almost three quarters of these vehicles were registered in the three Provinces of Ontario, Quebec and British Columbia.

Farm trucks amounted to 33.4 p.c. of the commercial vehicle registrations but of course accounted for only a small portion of the total net ton-miles performed. More than three quarters of all trucks registered in Saskatchewan and half of those registered in Manitoba and Alberta were used in farm operations, and more than 70 p.c. of all farm trucks in Canada were registered in the Provinces of Ontario, Saskatchewan and Alberta.

Urban Transit Systems.—The collection of statistical information on urban transit systems has been extensively reorganized in recent years because of major changes made in the types of vehicles used for mass passenger movement in urban centres. The current series, which was started in 1956, includes operations of motor buses, trolley coaches, street-cars and subway cars carrying passengers in urban and suburban service.

¹ Initial revenue passenger fares, excluding transfers.

² Breakdown not available; included in other items.

³ Excludes British Columbia Electric Railway Company (British Columbia Hydro and Power Authority from 1962).

Motor Vehicle Traffic Accidents.—There were 363,033 motor vehicle traffic accidents reported in 1964 compared with 336,255 in the previous year. Deaths from such accidents continue their upward trend, numbering 4,210 in 1963 and 4,652 in 1964 as against 2,715 in 1954. Statistics for 1964 are given by province in Table 14, but it should be noted that, although motorists are required by law to report accidents, complete statistics of these accidents are not available for all provinces. According to DBS vital statistics data, there were, in 1964, 4,863 deaths from motor vehicle accidents; of these, 110 occurred in non-traffic motor vehicle accidents on private property.

PART IV.—WATER TRANSPORT*

The Canada Shipping Act.—Legislation regarding all phases of shipping is consolidated in the Canada Shipping Act (RSC 1952, c. 29). Under the Act and its amendments the Parliament of Canada accepts full responsibility for the regulation of Canadian shipping.

Section 1.—Shipping Facilities and Traffic

Subsection 1.—Shipping

All Canadian waterways including canals, lakes and rivers are open on equal terms, except in the case of the coasting trade, to the shipping of all countries of the world so that Canadian shipping must compete with foreign flag shipping.

Under the British Commonwealth Merchant Shipping Agreement, all Commonwealth ships enjoy equal privileges with Canadian ships in the carriage of goods and passengers from one port in Canada to another port in Canada, commonly known as the coasting trade. Prior to the completion of the St. Lawrence Seaway most of the domestic Great Lakes traffic was moved in Canadian-registered ships and the rights of other Commonwealth ships in this trade were largely theoretical. After the Seaway was finished the intrusion of other Commonwealth ships, particularly United Kingdom ships, became a reality.

* Information and statistics dealing with this subject have been supplied as follows: aids to navigation, canals, harbours, administrative services, and marine services by the Department of Transport and the National Harbours Board; the St. Lawrence Seaway by the St. Lawrence Seaway Authority; part of the financial statistics by the Department of Public Works; shipping subsidies by the Director of Subsidized Steamship Services, Canadian Maritime Commission; and canal traffic and statistics of shipping by the Public Finance and Transportation Division, Dominion Bureau of Statistics.

Canadian Registry.—Under Part I of the Canada Shipping Act, ships in excess of 15 tons net register and pleasure yachts in excess of 20 tons net are required to be registered; ships of lower tonnage may be registered voluntarily, otherwise they are required to be operated under a Vessel Licence if powered by a motor of 10 hp. or more. Sect. 6 of the Act restricts ownership to British subjects or bodies corporate incorporated under the law of a country of the Commonwealth or of the Republic of Ireland and having their principal place of business in those countries. Under the British Commonwealth Merchant Shipping Agreement, all Commonwealth ships are given the general designation 'British Ship', and a ship that should be but is not registered is not entitled to the privileges accorded to British ships. Ships in the planning stage or in course of construction may be recorded before registry by a Registrar of Shipping at one of the 75 Ports of Registry in Canada.

1.—Vessels on the Canadian Shipping Registry, by Province, as at Dec. 31, 1962-64

NOTE.—Figures from 1935 are given in the corresponding table of previous Year Books beginning with the 1941 edition.

Shipping Traffic.—The figures for 1955 and 1956 given in Table 2 cover the international coastwise movement of cargo in and out of customs ports. In January 1957 the coverage was extended to include tonnage of vessels and tons of cargo in and out of non-customs ports. Reports are not required for vessels of less than 15 registered net tons, for naval vessels, or (commencing with 1962) for fishing vessels.

2.—Vessels Entered at Canadian Ports, 1955-64

The freight movement through a large port takes a number of different forms. These include cargoes loaded for and unloaded from foreign countries and cargoes loaded and unloaded in coastwise shipping, i.e., domestic freight moving between Canadian points. There is, as well, the in-transit movement in vessels that pass through the harbour without loading or unloading and the movement from one point to another within the harbour, which in many ports amounts to a large volume.

Shipping statistics, which cover traffic in and out of both customs and non-customs ports, do not include freight in transit or freight moved from one point to another within the harbour. Table 4 shows the principal commodities loaded and unloaded in foreign and coastwise shipping at the ten ports handling the largest cargo volumes in 1964. These ports handled 61.7 p.c. of all Canada's international shipping and 42.8 of the coastwise trade. The specific commodities shown are those transported in volume and often in bulk form.

4.—Principal Commodities in Water-Borne Cargo Loaded and Unloaded at Ports Handling the Largest Tonnages in 1964

NOTE.—Only commodities totalling over 50,000 tons are listed.

Subsection 2.—Harbours

Water transportation cannot be studied with any degree of completeness without taking into consideration the co-ordination of land and water transportation at many of the ports. Facilities provided to enable interchange movements include the necessary docks and wharves, some for passenger traffic but most of them for freight, warehouses for the handling of general cargo, and special equipment for such bulk freight as lumber, coal, oil and grain. Facilities may include cold storage warehouses, harbour railway and switching connections, grain elevators, coal bunkers, oil storage tanks and, in the chief harbours, vessel repair docks.

Ten of the principal harbours of Canada are administered by the National Harbours Board (two in Newfoundland since Jan. 1, 1965). Eleven other major harbours come under the supervision of the Department of Transport and are administered by harbour commissioners that include municipal as well as Federal Government appointees. In addition, there are about 300 public harbours under the direct supervision of the Department of Transport, administered under rules and regulations approved by the Governor General in Council. Harbour masters have been appointed by the Minister of Transport for 110 of these harbours, their remuneration being paid from fees levied on vessels under the terms of the Canada Shipping Act.

Throughout the country there are several thousand minor wharves and breakwaters administered by the Department of Transport under the Government Harbours and Piers Act. These facilities are for the accommodation of smaller freight vessels and commercial fishing craft and are generally under the direct supervision of wharfingers whose remuneration is determined as a percentage of wharfage fees collected. Small non-revenue wharves are under the general supervision of the Department of Transport District Marine Agents. At most ports, in addition to the public harbour facilities operated by the operating authorities, there are dock and handling facilities owned by private companies such as railway, pulp and paper, oil and sugar industries.

National Harbours Board.—The National Harbours Board, a Crown corporation established in 1936, is charged with the administration and operation of the following properties: port facilities such as wharves and piers, transit sheds, grain elevators, cold storage warehouses, terminal railways, etc., at the harbours of St. John's and Bay d'Espoir (since Jan. 1, 1965), Halifax, Saint John, Chicoutimi, Quebec, Trois-Rivières, Montreal, Vancouver and Churchill; grain elevators at Prescott and Port Colborne; and the Jacques Cartier and Champlain Bridges at Montreal. Facilities at the larger harbours are listed in Table 5, and summary traffic statistics for 1963 and 1964 in Table 6. All ports, with the exception of Churchill, established new traffic records in 1964. Operating revenues and expenditures for 1963 and 1964 are given in Table 22, p. 808.

5.—Facilities of the Larger Harbours Administered by the National Harbours Board, as at Dec. 31, 1964

NOTE.—The facilities at these ports include those under the control of other agencies as well as those of the National Harbours Board.

Subsection 3.—Canals

The canals and canalized waters of Canada under the jurisdiction of the Department of Transport, together with those under the jurisdiction of the St. Lawrence Seaway Authority, comprise a series of waterways providing navigation for 1,875 miles inland from salt water.

Those included under the two classifications—Seaway canals and Department of Transport canals—are listed in Table 7 with their locations, lengths and lock complement. In addition to these, the federal Department of Public Works administers the St. Andrew's Lock (length, width and draught, respectively, 215, 45 and 17 feet) on the Red River at Selkirk, Man., and the lock at Poupore, Que. A few small locks are operated by provincial authorities.

During 1964, 93,276,850 tons of freight and 23,155 vessels passed through the canals as compared with 74,585,427 tons of freight and 21,811 vessels during 1963. In addition to freight and passenger vessels, thousands of pleasure craft are locked through the canals. Vessels locking at Sault Ste. Marie during 1964 carried 131,396 passengers as compared with 142,663 in 1963.

¹ Minimum depth of Seaway canals is 27 feet and minimum width 200 ft. Wiley-Dondero canal and two locks near Massena, N.Y., are in United States territory; dimensions are approximately the same as those of Canadian facilities. ² Notice must be given by vessels of more than six-foot draught. ³ With Lake Ontario at elevation of 243 feet.

Traffic using United States Locks at Sault Ste. Marie only.....	10,675,828	74,575,468	85,251,296	10,928,447	82,988,582	93,917,029
Totals.....	26,835,000	104,995,580	131,830,580	48,449,728	137,200,274	185,650,002

Since 1950, the traffic through the Sault Ste. Marie canal (Canadian lock and United States locks) has fluctuated between a high of 128,489,000 tons in 1953 and a low of 70,906,000 tons in 1959; the volume in 1964 was 94,883,666 tons. Throughout the period, the dominant traffic from a tonnage aspect continued to be iron ore, which also reached its highest point in 1953 at 98,658,000 tons, dropped to 47,214,000 tons in 1961 and stood at 64,695,532 tons in 1964. In 1958, wheat replaced soft coal in second place where it has remained, tonnages increasing from 7,478,000 to 12,226,493 during the 1958-64 period; during the same years, other grains usually ranged between 35 p.c. and 60 p.c. of the wheat tonnage, although they were only 28 p.c. of that tonnage in 1961 and 30 p.c. in 1964. Soft coal carried in the 1958-64 period ranged between 6,389,000 tons in 1958 and 7,308,275 tons in 1964.

Canadian Use of the Panama Canal.—The use of the Panama Canal as a transport facility for the movement of goods from one Canadian port to another is of relatively minor importance. Of the total of 5,123,000 long tons of cargo leaving the West Coast of Canada in the year ended June 30, 1964 and passing through the Panama Canal, only 10,000 long tons were destined for Eastern Canadian ports. Similarly, of the 902,000 long tons of cargo leaving Eastern Canadian ports and passing through the Panama Canal, 13,000 long tons were destined for Western Canadian ports. The total tonnage passing through the Panama Canal and arriving in Canadian West Coast ports from any origin, Canada or elsewhere, amounted to 626,943 long tons in the year ended June 30, 1964; the total from any origin arriving at Eastern Canadian ports after having passed through the Panama Canal was 536,613 long tons.

Subsection 4.—The St. Lawrence Seaway

Events leading up to the beginning of the St. Lawrence Seaway project and the progress made during the years of its construction are covered in the 1954 to 1959 Year Books. A special article carried in the 1956 edition (pp. 821-829) gives detailed information on Great Lakes-St. Lawrence waterway traffic immediately prior to the beginning of construction on the project and another special article carried in the 1960 Year Book (pp. 851-860) covers the story of the Seaway, its new facilities and services and the movement of freight during the second year of its operation.

The St. Lawrence Seaway Authority, constituted as a Corporation by Act of Parliament in 1951 (RSC 1952, c. 242), undertook the construction (and subsequent maintenance and operation) of Canadian facilities between Montreal and Lake Erie to allow 27-foot navigation, concurrently with the construction of similar facilities in the International Rapids Section of the St. Lawrence River by the Saint Lawrence Seaway Development Corporation of the United States. The Seaway was opened to commercial traffic on Apr. 1, 1959 and officially opened on June 26, 1959. With the opening of the Seaway, certain ancillary canals were transferred to the jurisdiction of the St. Lawrence Seaway Authority for operation and maintenance purposes. These include the Lachine, a section of the Cornwall Canal, a portion of the third Welland Canal and the Canadian locks at Sault Ste. Marie. Tolls are not assessed against vessel movements on these waterways and traffic data for them are not included in this Subsection.

Tables 13 and 14 give combined traffic statistics of the St. Lawrence and Welland Canals for the year 1964. Duplicate transits are eliminated so that the figures show the actual total movement of goods through the St. Lawrence Seaway. On this basis, 4,998 ships carrying more than 21,402,000 tons of cargo moved upbound through the Seaway in 1964 and 5,038 vessels carrying 34,377,000 tons moved downbound. Ocean-going ships carried 19.1 p.c. of the total cargoes, lakera 80.8 p.c. and other craft 0.1 p.c. There is still evident an imbalance of loading, 38.9 p.c. of the gross registered tonnage of all vessels upbound being in ballast compared with only 12.8 p.c. of the vessels downbound. Of the total tonnage carried upbound in 1964, 18,111,000 tons were domestic cargo and 3,291,000 tons were foreign traffic; downbound, 27,310,000 tons were domestic freight and 7,066,000 tons were carried to and from foreign ports.

			Totals	55,779,142	100.0

On the Montreal-Lake Ontario Section, upbound traffic increased 36.8 p.c. in 1964 compared with 1963 and downbound traffic 19.4 p.c. The former was accounted for almost entirely by the volume of iron ore shipped from St. Lawrence ports to Hamilton and Lake Erie, and the latter by overseas shipments of wheat. There were 231 more upbound transits and 263 more downbound transits in 1964 than in 1963, indicating a slight increase in the number of vessels using this portion of the Seaway. Bulk cargo comprised 94.0 p.c.

of the total traffic through the Section in 1964, the principal commodities through the St. Lawrence canals being iron ore, wheat, corn, fuel oil, bituminous coal and barley. Traffic patterns show that 30.9 p.c. of the total movement was between two Canadian ports, 42.9 p.c. moved between Canadian and United States ports and 25.9 p.c. consisted of foreign trade to and from Canada and the United States. The small remainder was traffic between two ports in the United States.

There were 8,304 transits through the Welland Canal in 1964, with a cargo volume of 18,541,000 tons upbound and 32,847,000 tons downbound; bulk cargo accounted for 94.0 p.c. of the traffic. Although many vessels pass through both the St. Lawrence and the Welland Canals on 'through' trips, there is a substantial amount of local traffic between Great Lakes ports which involves only the Welland Canal. These movements are largely iron ore, grain and coal. The Welland Canal traffic was nearly 12,080,000 cargo tons greater than that reported for the Montreal-Lake Ontario Section.

Income of the St. Lawrence Seaway Authority for 1964 amounted to \$15,050,107, comprising toll revenue of \$13,544,436 assessed for transits through the Seaway locks between Montreal and Lake Ontario together with sundry revenues (rentals, wharfage, bridge revenue, etc.) amounting to \$2,505,671. Operating and maintenance expenses amounted to \$7,895,172 and administrative expenses were \$2,847,868, making a total of \$10,743,040 excluding an amount of \$452,063 for non-toll canals. Comparable figures for 1963 are shown in Section 2, p. 807.

Pleasure craft locked through the Montreal-Lake Ontario Section canals numbered 343 upbound and 354 downbound in 1964, and those locked through the Welland Canal numbered 104 upbound and 128 downbound.

Subsection 5.—Marine Services of the Federal Government

The services covered in this Subsection deal with the Canadian Coast Guard and aids to navigation, including the maintenance of the St. Lawrence River Ship Channel, steamship inspection and pilotage service.

Canadian Coast Guard.—The Canadian Coast Guard, known by that name only since January 1962, has played a vital part in Canada's maritime economic and industrial development since Confederation. At that time several previously established government marine organizations were brought together as a single marine service, founding the fleet that became the responsibility of the Department of Transport when it was established in 1936.

From a small beginning, the fleet has expanded into an organization consisting of more than 200 vessels of all types, of which nearly 50 are of a larger size. Of these, 31 measure more than 1,000 tons gross. They include 10 fully strengthened icebreakers and eight lighthouse supply-and-buoy ships with icebreaking capabilities. These vessels comprise in numbers the world's second largest icebreaking force. The greater part of the fleet's expansion has occurred within the past few years to meet a new and fast-growing requirement for icebreaker support of shipping activities in the Canadian Arctic during the summer and for commercial shipping in the Gulf of St. Lawrence in the winter.

The Department's concern with marine search-and-rescue activities has also increased, not only in the field of commercial shipping but also in connection with the mushrooming public interest in pleasure boating with its attendant safety problems.

The duties of the Canadian Coast Guard are civilian in nature and no armaments are carried on the ships. It maintains and supplies shore-based and floating aids to navigation in Canadian waters, including the Atlantic and Pacific coastal areas, the St. Lawrence River and Great Lakes, the channels of both the eastern and western Arctic, Hudson Bay, the Mackenzie River system and other inland waters. The territory covered is vast and the duties involved are extensive.

Since its beginning, the fleet has carried out icebreaking as one of its important undertakings. In its earliest years, such work was done mainly to aid shipping in eastern port areas and in the St. Lawrence for whatever winter period was allowed by weather conditions and the limitations of ships of that area. Icebreaking has also been carried out through the years at Montreal to prevent floods caused by ice jams in the river. When the development of the sea route from Churchill, Man., to Europe became a factor in the country's maritime economy, icebreaker assistance was extended to commercial shipping using that route. Since 1954, as a result of the opening up of the Canadian Arctic, the Department has handled all icebreaking requirements in these waters, extending to within a few hundred miles of the North Pole.

Arctic operations necessitate ice reconnaissance services, which are carried out by fixed wing aircraft flying out of such ports as Churchill, Man., and Frobisher Bay and Resolute Bay in the High Arctic. These flights are under the direction of the Department's Meteorological Branch and provide information on ice conditions in the sea lanes in all areas where the convoys operate. Helicopters, based aboard the icebreakers, are used for close-range reconnaissance. They carry trained observers provided by the Meteorological Branch and their ability to spot leads through the ice, which cannot be seen from the ship, has resulted in tremendous savings in time for the convoys. The helicopters are also very useful for ship-to-shore personnel movements and for carrying light freight.

As an indication of the growth of Arctic re-supply operations handled by the Canadian Coast Guard, the cargo handled, which was approximately 8,000 tons in 1954, had increased to almost 100,000 tons in 1964.

A Canadian Coast Guard Officer Training College, established in 1965 by the Department of Transport at Sydney, N.S., will provide a four-year course for students who will graduate with certificates as either Marine Engineer, First Class, or Master Mariner. The first class comprised forty cadets from all across Canada.

Aids to Navigation.—The Canadian system of aids to navigation is similar to that of other North American countries. Such aids maintained by the Department of Transport for Canadian and contiguous waters consist of buoys, lightships, lighthouses, day beacons, radio beacons and two electronic networks operating on the hyperbolic principle—Loran and Decca. The numbers of danger signals maintained during the years ended Mar. 31, 1964 and 1965 were:—

<u>Type of Signal</u>	<u>1963-64</u>	<u>1964-65</u>	<u>Type of Signal</u>	<u>1963-64</u>	<u>1964-65</u>
	No.	No.		No.	No.
Lights	3,374	3,447	Hand fog horns and bells	60	81
Lightships	2	2	Lighted and combination lighted whistling and bell buoys	1,598	1,582
Light-keepers	893	915	Unlighted bell and whistling buoys ..	57	43
Fog whistles and sirens	51	54	Explosive signals	1	—
Diaphones and tyfons	268	271	Unlighted beacons and buoys	12,614	12,786
Mechanical bells and gongs ..	18	10			

All aids incorporating light or sound devices are listed in the Department of Transport annual publication *List of Lights and Fog Signals*. Information on the radio beacons and on Loran and Decca is published in *Radio Aids to Marine Navigation*.

Navigable waters have been improved greatly by dredging in channels and harbours, by the removal of obstructions, and by the building of remedial works to maintain or control water levels. Incidental to these developments of navigable waters are works to guard shorelines and prevent erosion, and for the control of roads and bridges that cross navigable channels. Icebreaking operations are continuous throughout the winter.

St. Lawrence Ship Channel.—This channel extends from about 40 miles below Quebec City to the foot of the Lachine Canal at Montreal, a distance of 200 miles. About 130 miles of this distance is dredged channel.

Above Quebec the channel has a limiting depth of 35 feet at extreme low water and a minimum width of 550 feet, with additional width up to 1,500 feet at all curves and difficult points, and additional anchorage and turning areas. Widening of the channel to a minimum width of 800 feet, commenced in 1952, is about 65 p.c. completed. This section comprises about 115 miles of dredged channel. Below Quebec the limiting depth of dredged channel, about 15 miles in length, is 30 feet at low tide, with a width of 1,000 feet. An average tidal range of 15 feet in this area provides ample depth for any vessel using the St. Lawrence route. Above Quebec, maintenance requirements as a result of silting in this dredged channel are relatively minor but below the city silting is more pronounced because of tidal action.

The ship channel is well defined by buoys and the centre marked by range lights, permitting uninterrupted day and night navigation throughout the open season from about mid-April to early December. The movements of all shipping, weather and ice conditions and obstructions to traffic throughout the St. Lawrence waterway from Fame Point, Que., to Kingston, Ont., are recorded and made available to all concerned through a series of reporting stations known as the Marine Reporting Service.

15.—Seasons of Open Navigation on the St. Lawrence Ship Channel, 1955-64

NOTE.—Figures from 1882 are given in the corresponding table of previous Year Books beginning with the 1934-35 edition.

Year	Channel Open, Quebec to Montreal ¹	First Arrival from Sea, Montreal Harbour	Last Departure for Sea, Montreal Harbour	Year	Channel Open, Quebec to Montreal ¹	First Arrival from Sea, Montreal Harbour	Last Departure for Sea, Montreal Harbour

¹ "Channel Open" means the route can be navigated although there may be floating ice in the river.

Steamship Inspection.—The Steamship Inspection Service was established by authority of the Canada Shipping Act. Its functions include the formulation and subsequent enforcement of regulations concerned with the approval of design of hulls, machinery and equipment of ships; inspection during construction; periodic inspection and the issue of inspection certificates; the assignment of load lines; the conditions under which dangerous goods may be carried in ships; the protection against accident of workers employed in loading and unloading ships; the prevention from pollution of Canadian territorial waters by oil from ships; control of pollution of the atmosphere by smoke emitted by ships; control of the powering, equipment and load limits of small vessels; and the certification of marine engineers. The Board also prepares correspondence courses in marine engineering for use in Marine Engineering Schools now controlled by the Department of Labour.

The Chairman and the Board of Steamship Inspection are located at Ottawa and field offices are maintained in the principal ocean and inland ports. A total of 1,762 vessels of Canadian ownership or registry, which included 466 passenger ships, and 42 vessels registered or owned elsewhere were inspected during the year ended Mar. 31, 1965.

Pilotage.—Pilotage service functions under the provisions of Part VI and Part VIA of the Canada Shipping Act. Wherever a pilotage district has been created by the Governor in Council, qualified pilots are licensed by the pilotage authority of the district. There are in Canada 22 pilotage districts, in nine of which the Minister of Transport is the pilotage authority (see Table 16); in each of the other districts the authority is a local body appointed by the Governor in Council. There are also three districts that are administered jointly by Canada and the United States.

In addition, there are known to be five districts in Newfoundland under the local pilotage authority. These districts continued to be administered under Newfoundland statutes after union with Canada (Mar. 31, 1949). Part VI of the Canada Shipping Act with respect to pilotage became effective in Newfoundland on Jan. 1, 1965.

Section 2.—Financial Statistics of Waterways

The principal statistics available on the cost of facilities for water-borne traffic consist of the record of public expenditure on waterways. Such expenditure may be classified as capital expenditure, or investment and expenditure for maintenance and operation. Revenue from operation is also recorded. The major part of the capital expenditure for the permanent improvement of waterways is provided by the Federal Government. Capital expenditure by municipalities and private capital expenditure are confined almost entirely to terminal or dockage facilities. On the other hand, most of the investment in shipping has come from private sources. No figures are available regarding private investment in shipping except those appearing in the reports of the operating companies that cover only a portion of the field. There are no statistics showing the revenue of ship operators from passenger and freight traffic.

Capital Expenditure.—The only figures available of federal capital expenditure on Canadian waterways are those contained in the *Public Accounts* and the annual reports of the Departments of Transport, Public Works and Finance and in the annual report of the St. Lawrence Seaway Authority. It must be realized that such expenditure cannot be regarded as an accurate indication of the present worth of the undertakings represented. The cost of building canals and other waterways and permanent works to facilitate water transportation in Canada is represented in such reports at their original book values, no deductions having been made from the cumulative totals for depreciation from year to year or for abandonment of works that have been superseded, such as, for example, the first Welland canals and the now flooded St. Lawrence River canals. To this extent, such figures are an over-statement of the present value of the works in use. The figures are further limited by the fact that they do not include the cost of maintenance and improvements or the operation of these works, such charges having been made to the consolidated deficit account as annual expenditure and not to capital account. Thus, such capital expenditure on waterways is not included in this publication, with the exception of that made by the National Harbours Board on facilities under its jurisdiction. Capital values of the fixed assets administered by the Board are shown as at Dec. 31, 1963 and 1964

in Table 17. These figures include all buildings, machinery and durable plant improvements and have been subject to deductions for depreciation and the scrapping or abandonment of plant, and therefore represent a fair approximation of the present value of the properties.

17.—Capital Values of Fixed Assets Administered by the National Harbours Board, as at Dec. 31, 1963 and 1964

NOTE.—Compiled from the annual reports of the National Harbours Board.

Item	1963	1964	Item	1963	1964

Cold storage systems.....	6,813,943	6,857,178	Totals	403,716,355	417,522,220

The total amount advanced by the Federal Government to the National Harbours Board for capital expenditure during 1964 was \$3,619,252, distributed as follows: Quebec, Que., \$1,497,569; Churchill, Man., \$100,450; and Champlain Bridge (Montreal), \$2,021,233. The total for 1963 was \$7,325,025, distributed as follows: Saint John, N.B., \$98,939; Montreal, Que., \$4,481,043; and Champlain Bridge (Montreal), \$2,745,043.

Waterways Expenditure and Revenue.—Expenditure under this heading (Tables 18 to 20) is mainly for the operation and maintenance of various facilities for water transport but, unfortunately, the line between operation and maintenance expenditure is not as finely drawn as is desirable. Revenue in connection with waterways of the Department of Transport, the Department of Public Works and the St. Lawrence Seaway Authority is shown in Table 21.

To facilitate water transportation, the Federal Government expends annually, in addition to the recurrent expenditure shown here, a considerable amount to cover deficits of the National Harbours Board, and for mail subsidies and steamship subventions as shown in Table 23. Operating revenue and expenditure of facilities administered by the National Harbours Board are shown separately in Table 22.

PART V.—CIVIL AIR TRANSPORT

Administration.—Civil aviation in Canada is under the jurisdiction of the Federal Government and is administered under the authority of the Aeronautics Act, 1919 and amendments thereto. The Aeronautics Act is in three parts. Broadly speaking, Part I deals with the technical side of civil aviation comprising matters of registration of aircraft, licensing of airmen, the establishment and maintenance of airports and facilities for air navigation, air traffic control, accident investigation and the safe operation of aircraft. This Part of the Act is administered by the Director of Civil Aviation under the supervision of the Assistant Deputy Minister, Air Services, Department of Transport. Part II of the Act deals with the social and economic aspects of commercial air services and assigns to the Air Transport Board certain regulatory functions of commercial air services (see pp. 758-759). Part III deals with matters of government internal administration in connection with the Act.

International Air Agreements.—The position of Canada in the field of aviation as well as its geographical location makes co-operation with other nations of the world engaged in international civil aviation imperative. Canada therefore took a major part in the original discussions that led to the establishment of the International Civil Aviation Organization (ICAO) which has headquarters at Montreal, Que. A special article on The International Civil Aviation Organization and Canada's Participation Therein appears in the 1952-53 Year Book, pp. 820-827. At present Canada has air agreements with 21 other countries.

Federal Civil Aviation Policy.—The intent of Federal Government concern in civil aviation is to provide an efficient and stable service for the Canadian public and the best possible economic framework for the major and regional carriers. In formulating its aviation policy in 1964, three principles were accepted by the Government as basic. The first related to the international field and stated that air services provided by Canadian airlines should serve the Canadian interest as a whole; that these services should not be competitive or conflicting but should represent a single integrated plan which could be achieved by amalgamation, by partnership or by a clear division of fields of operations. The two major airlines agreed that the most effective way to carry out this policy would be by a clear division of their fields of operations so that outside Canada neither airline

would serve any point served by the other. As a result, it has now been decided that Canadian Pacific Airlines Limited will serve the whole Pacific area, the whole Continent of Asia, Australia and New Zealand, southern and southeastern Europe and Latin America, and that Air Canada will serve Britain, western, northern and eastern Europe, and the Caribbean. The only exception to this clear-cut division is that CPA will continue to serve the Netherlands. This division accounts for the whole of the world except Africa and the United States; decisions concerning the former depend on the contemplation of service to that area and those concerning the latter on the completion of new bilateral agreements. Co-operation will be maintained between the two carriers in sales and agency relationships, each carrier representing the other outside its own area, so that passengers will be encouraged to travel to their destinations by Canadian airlines. Other measures of co-operation, including joint advice to the Government on air negotiations and joint servicing and support arrangements, will also be maintained.

The second principle concerned the domestic mainline services and stated that, although competition was not to be rejected, development of competition should not compromise or seriously injure the economic viability of Air Canada's domestic operations which represent the essential framework of its network of domestic services, and in the event that competition continues, opportunity should be ensured for growth to both lines above this basic minimum. In 1965 a special aviation consultant was appointed to advise whether the growth of domestic mainline service will now permit some further degree of competition and to recommend the procedure for working out such extensions of service.

The third principle concerned the role of regional air carriers providing scheduled service and their relationship with the mainline carriers. Recommendations are being prepared by the two major airlines and the larger regional carriers as to specific steps that might be taken by the carriers themselves or the Government to improve the position of the regional air carriers and give them a reasonable chance to operate successfully without subsidization.

Thus, in the international field, the joint approach to the provision of world-wide service by the two major Canadian carriers should strengthen their position in a very competitive field and should provide a better over-all service to the travelling public. In the domestic field, a degree of competition will remain to provide the public with the advantages that can result from a competitive atmosphere but excesses of competition, which could be ruinous to the operators and unsatisfactory to the public, will be avoided.

Section 1.—Air Services

Two major airlines, Air Canada and Canadian Pacific Airlines Limited, form the nucleus of Canada's freight and passenger air service. Current operations of these airlines are discussed briefly below, followed by short outlines of the services provided by independent airlines and a list of Commonwealth and foreign air carriers licensed to operate services into Canada.

Broadly, air transport services in Canada may be grouped into two classes—Scheduled Services and Non-scheduled Services. Services in the first group are operated by air carriers that offer public transportation of persons, mails and/or goods by aircraft, serving designated points in accordance with a service schedule and at a toll per unit. The second group includes the following:—

- (1) Regular Specific Point Air Services—operated by air carriers who offer public transportation of persons, mails and/or goods by aircraft serving designated points on a route pattern and with some degree of regularity, at a toll per unit.
- (2) Irregular Specific Point Air Services—operated by air carriers who offer public transportation of persons, mails and/or goods by aircraft from a designated base, serving a defined area or a specific point or points, at a toll per unit.
- (3) Charter Air Services—operated by air carriers who offer public transportation of persons and/or goods by aircraft from a designated base, at a toll per mile or per hour for the charter of the entire aircraft, or at such other tolls as may be permitted by the Air Transport Board.

- (4) Contract Air Services—operated by air carriers who do not offer public transportation but who transport persons and/or goods solely in accordance with one or more specific contracts.
- (5) Flying Clubs—operated by air carriers incorporated as non-profit organizations for the purpose of furnishing flying training and recreational flying to club members.
- (6) Specialty Services—operated by air carriers for purposes not provided for by any other class, such as flying training, recreational flying, aerial photography and survey, aerial pest control, aerial advertising, aerial patrol and inspection, etc.

Air Canada.—In 1964, its 27th year of operation, Air Canada carried a record 4,093,754 passengers on scheduled flights and 95,595 on charter flights, a total of 4,189,349. Compared with 1963, scheduled transatlantic passenger traffic showed a marked increase of 23 p.c., attributable mainly to the new low fares introduced on Apr. 1, 1964 and to attractive frequencies and schedules. But despite these low rates, charter traffic also increased substantially and accounted for nearly one third of the transatlantic passenger traffic. North American scheduled passenger traffic as a whole increased by 6 p.c. and southern scheduled traffic by 5 p.c. Operating statistics for the years 1955-64 are given in Table 1.

At the end of 1964, Air Canada was operating over 39,840 route miles linking Canada, the United States, the British Isles, Continental Europe and the Caribbean. Its fleet consisted of 78 turbine-powered aircraft—16 DC-8's, 23 turbo-prop Vickers Vikings and 39 turbo-prop Vickers Viscounts. Orders were placed for two additional DC-9 twin-jets during the year, bringing to eight the number of these aircraft scheduled for delivery in 1966. Planning for the integration of the DC-9 into the Air Canada fleet in 1966 was well advanced by the end of the year; it is expected that the new aircraft will be introduced on domestic services, replacing and augmenting existing Viscount and Vanguard service but, as additional aircraft are delivered, DC-9 service will be extended to other areas such as Florida and the inner Caribbean. At the year-end, Air Canada employees numbered 11,670.

¹ Includes non-scheduled service.

² Includes excess baggage and express.

³ Includes other revenue.

Canadian Pacific Airlines Limited.—Canadian Pacific Airlines operates a 45,287-mile route pattern linking five continents as well as major cities in Canada. This pattern comprises 6,900 domestic miles, including 2,450 miles on Canadian mainline service.

In 1964, CPA carried 541,014 passengers, a greater number than in any other year since the company's inception in 1942. Revenue passenger-miles on international routes in 1964 showed a substantial advance to 983,066,481 over a 1963 figure of 909,407,523.

CPA's international routes, 37,600 miles in extent, operate from Vancouver to Honolulu, Fiji, New Zealand and Australia on the South Pacific Service; to Japan and Hong Kong via the Great Circle Route across the North Pacific; from Vancouver via Calgary and

Edmonton to Amsterdam on the Polar Route; and across the Atlantic from Toronto and Montreal to Portugal, Spain and Italy. A South American network serves Mexico City, Lima, Santiago and Buenos Aires from Windsor, Toronto and Montreal in Eastern Canada and Vancouver and Calgary in the West. In Canada, CPA operates a mainland transcontinental service linking Vancouver, Winnipeg, Toronto and Montreal and a domestic network of north-south routes in British Columbia, Alberta and the Yukon Territory.

CPA's fleet consists of 18 aircraft, including five Douglas Super DC-8's, four Bristol Britannias, five Douglas DC-6B's and three Douglas DC-3's. Two additional Super DC-8's are on order, one for delivery in late 1965 and the other in 1966. The international routes are served by the Super DC-8's and Bristol Britannias and the domestic routes are served by DC-6B and DC-3 aircraft. The transcontinental route is served by Super DC-8's.

Independent Airlines.—In addition to the two major Canadian air carriers—Air Canada and Canadian Pacific Airlines Limited—there are four domestic air carriers licensed to operate scheduled commercial air services in Canada, namely, Eastern Provincial Airways (1963) Ltd., Gander, Nfld.; Quebecair, Rimouski, Que.; TransAir Limited, Winnipeg, Man.; and Pacific Western Airlines Ltd., Vancouver, B.C.

Licensed Canadian air carriers operating in Canada as at Mar. 31, 1965 held valid operating certificates covering 40 scheduled, 161 flying training, and 1,597 other non-scheduled and specialty services. These non-scheduled services, in addition to providing effective access to sections of Canada that are inaccessible by other means of transportation, act as feeder lines to the scheduled airlines. They also include such specialty services as recreational flying, aerial photography and surveying, aerial pest control, aerial advertising, aerial patrol and inspection.

Eastern Provincial Airways (1963) Ltd.—This company operates throughout the Atlantic Provinces, eastern Quebec, Labrador and Greenland. It serves Charlottetown and Summerside in Prince Edward Island; Moncton and Dalhousie in New Brunswick; New Glasgow and Halifax in Nova Scotia; Deer Lake—Corner Brook, Gander and St. John's in Newfoundland; Goose Bay and Saglek in Labrador; and Sept Îles and Magdalen Islands in Quebec.

The Airways fleet consists of three Handley-Page Dart Heralds, one DC-4, three DC-3's, two PBV Cansos, five DH Beavers and five DH Otters. The Company carries on an extensive air freight service throughout the above areas and conducts many specialty services such as mineral exploration, the transporting of hunting and fishing parties, ambulance service and forestry, seal and ice patrol services.

Quebecair.—Quebecair, a privately owned commercial airline with headquarters at Rimouski, serves various points in the Province of Quebec including Montreal, Quebec, Saguenay, Rivière du Loup, Rimouski, Mont Joli, Sept Îles, Wabush, Schefferville, Gagnon, Baie Comeau, Forestville, Manicouagan and Murray Bay. No point served is more than five flying hours from Montreal.

The company began operations in 1946 under the name of Rimouski Aviation Syndicate and was incorporated under the name of Rimouski Airlines in 1947. At the beginning of 1954, the newly created Rimouski Airlines bought out Gulf Aviation and formed Quebecair. The number of passengers flown in 1964 was 107,000 and the amount of freight carried totalled 2,109,000 lb.

The Quebecair fleet consists of four DC-3's, three F-27's, one C-46 cargo aircraft and one D-18 Beechcraft.

TransAir Limited.—TransAir operates scheduled, charter and sportsmen's flights in Manitoba, Saskatchewan, Ontario and the Northwest Territories. Thirty aircraft are in service from headquarters in Winnipeg and a major base in Churchill. Scheduled flights also originate from Pickle Lake and Sioux Lookout in Ontario, and Lac du Bonnet and Norway House in Manitoba. The airline has scheduled Viscount, DC-4 and DC-3 services

over 7,107 unduplicated miles. Mainline stops are made at Winnipeg, Brandon, Dauphin, The Pas, Flin Flon, Lynn Lake, Thompson and Churchill in Manitoba; Red Lake, Winisk and Ottawa in Ontario; Montreal in Quebec; and Yorkton, Regina, Saskatoon and Prince Albert in Saskatchewan. TransAir also has regular flights between Churchill and Rankin Inlet, Baker Lake and Coral Harbour in the Northwest Territories. From its Winnipeg and Churchill bases, TransAir operates vertical re-supply flights to the four main sites in the Canadian sector of the Distant Early Warning Line.

Pacific Western Airlines Ltd.—Pacific Western Airlines Ltd., with head office at Vancouver International Airport, is one of the largest independent air carriers in Canada. Route miles in the system total almost 7,200 and services operated include scheduled mainline, local regular unit toll and charter flights in Saskatchewan, Alberta, Yukon Territory, the Northwest Territories including the Arctic islands, and British Columbia. Regularly scheduled mainline services are operated northbound from Edmonton to Dawson Creek, Peace River, McMurray, Uranium City, Fort Smith, Pine Point, Fort Resolution, Hay River, Yellowknife, Fort Simpson, Wrigley, Norman Wells and Inuvik. Regular local services are flown from Yellowknife to Cambridge Bay and Resolute Bay, and from Inuvik to Aklavik, Fort McPherson and Arctic Red River. Local services also originate from Norman Wells to Fort Good Hope, Fort Norman, Wrigley and Fort Simpson, and from Yellowknife to Rocher River, Port Radium, Coppermine and Bathurst. The first no-reservations-required AirBus service in Canada operates daily between Edmonton and Calgary. Pacific Western also operates International Charter Services.

On the Pacific Coast, mainline services are operated from Vancouver to Comox, Powell River, Campbell River and Port Hardy and local services are operated between Prince Rupert, Stewart, Ford's Cove, Anyox, Maple Bay and Alice Arm in northern British Columbia. In addition, charter services are operated out of Vancouver, Nelson, Kamloops, Prince George, Terrace and Prince Rupert and, in the Northern Division, from Edmonton, Peace River, Fort Smith, Hay River, Yellowknife, Inuvik and Cambridge Bay.

Aircraft operated by Pacific Western number 48 and range from DC-7C's, DC-6B's, DC-6's, DC-4's, Super 46's and DC-3's on mainline services, to Otters, Beavers, Grumman Goose and Cessnas on charter and freight flights. Revenue passengers carried in 1964 totalled 224,139, freight and express carried amounted to 16,914,530 lb. and miles flown numbered 4,608,602.

Commonwealth and Foreign Scheduled Commercial Air Services.—At the end of 1965, there were 22 Commonwealth and foreign air carriers holding valid Canadian operating certificates and licences issued for the following international scheduled commercial air services into Canada:—

Aeronaes de Mexico, S.A. operating between Montreal (Canada) and Mexico City (Mexico).

Air France (Compagnie Nationale Air France), operating between Paris and other points in Metropolitan France, Montreal (Canada) and Chicago (U.S.A.) and beyond.

Alitalia (Italian International Airlines), operating between Rome and Milan (Italy), Montreal (Canada) and Chicago (U.S.A.).

American Airlines, Inc., operating between Toronto (Canada) and New York/Newark (U.S.A.).

British Overseas Airways Corp., operating between London and Manchester (England), Prestwick (Scotland), Shannon (Ireland), Montreal and Toronto (Canada) and Boston, New York and Chicago (U.S.A.), and between London (England), Prestwick (Scotland), Gander (Canada), Bermuda, Nassau, Montego Bay, Barbados and Trinidad.

Deutsche Lufthansa Atkiengesellschaft (Lufthansa German Airlines), operating between Hamburg (Germany) and other points abroad, Montreal (Canada) and Chicago (U.S.A.).

Eastern Air Lines, Inc., operating between the terminals Ottawa and Montreal (Canada) and New York (U.S.A.), and between the terminals Ottawa and Montreal (Canada) and Washington (U.S.A.).

KLM Royal Dutch Airlines, operating between Montreal (Canada) and Amsterdam (Netherlands).

Mohawk Airlines, Inc., operating between Toronto (Canada) and Buffalo (U.S.A.).

- North Central Airlines, Inc.*, operating between Port Arthur/Fort William (Canada) and Duluth/Superior (U.S.A.).
- Northeast Airlines, Inc.*, operating between Montreal (Canada) and Boston (U.S.A.) via Concord, Montpelier-Barre, Burlington and White River Junction (U.S.A.).
- Northwest Airlines, Inc.*, operating between Winnipeg (Canada) and Fargo (U.S.A.) and between Minneapolis/St. Paul (U.S.A.), Winnipeg and Edmonton (Canada), Anchorage (Alaska, U.S.A.) and beyond.
- Pan American World Airways Inc.*, operating between New York and Boston (U.S.A.), Gander (Canada), Shannon (Ireland) and London (England).
- Qantas Empire Airways Ltd.*, operating between Sydney (Australia), San Francisco (U.S.A.) and Vancouver (Canada).
- Sabena Belgian World Airlines*, operating between Brussels (Belgium), Manchester (England), Shannon (Ireland), Montreal (Canada) and New York (U.S.A.).
- Scandinavian Airlines System*, operating between Stockholm (Sweden), Oslo (Norway), Copenhagen (Denmark), Hamburg (Germany) and Montreal (Canada) and New York, Los Angeles and Chicago (U.S.A.).
- Seaboard and Western Airlines, Inc.*, operating between points in the United States, Gander (Canada) and points in Europe.
- Swiss Air Transport Company Ltd.* (Swissair), operating between Zurich and Geneva (Switzerland), Montreal (Canada) and Chicago (U.S.A.).
- United Air Lines, Inc.*, operating between Vancouver (Canada) and Seattle (U.S.A.).
- West Coast Airlines, Inc.*, operating between Calgary (Canada) and Spokane (U.S.A.).
- Western Air Lines, Inc.*, operating between Calgary (Canada) and Great Falls (U.S.A.).
- Wien-Alaska Airlines Inc.*, operating between Whitehorse, Y.T. (Canada) and Fairbanks and Juneau (Alaska, U.S.A.).

Flying Schools and Clubs.—At the end of 1964, 87 commercial flying schools were registered as members of the Air Transport Association of Canada. During the year, these schools instructed and graduated 1,591 students as private pilots and 426 students as commercial pilots.

Membership in the 33 flying clubs connected with the Royal Canadian Flying Clubs Association numbered 7,990 at the end of 1964. During the year these clubs instructed and graduated 1,111 students as private pilots and 83 students as commercial pilots.

Weather Services.—Weather services are provided by the Meteorological Branch, Department of Transport, to meet the demands of the general public and all basic economic endeavours such as agriculture, industry, forestry, shipping and fishing. Meteorological service is provided to national and international aviation. The military meteorological requirements in Canada and overseas are met by special co-operative arrangements with the Department of National Defence. The observing and forecasting of ice conditions in navigable waters, both inland and coastal, have expanded rapidly in recent years.

There are 61 weather offices in Canada, one on shipboard and three in Europe. Weather offices are linked by 55,300 miles of teletype and radio-teletype circuits, and a national facsimile system 14,600 miles long is used for the distribution of meteorological information in chart form. As of Jan. 1, 1965, the Branch maintained 285 surface synoptic and hourly weather reporting stations, a network of 32 radiosonde stations including five in the Arctic operated jointly with the United States, 72 stations recording upper winds, and 2,213 climatological stations. One Ocean Weather Station in the Pacific, 1,000 miles west of Vancouver, is maintained under International Agreement (see also p. 65).

Ground Facilities.—Aircraft landing areas in Canada are listed in Table 2 and classified by administrative agency as licensed or unlicensed land facilities or seaplane bases, and military airfields. Licensed aerodromes are those that are inspected at regular intervals and meet specific standards, whereas unlicensed aerodromes may not meet the same standards. In addition to aerodromes, a network of radio aids to navigation is maintained to facilitate en route navigation and safe landings under instrument conditions.

On Apr. 1, 1965, the Department of Transport operated 73 low frequency radio ranges and 40 VHF omni-directional ranges. Instrument Landing Systems in operation totalled 42 and there were 213 non-directional beacons in operation. All of the operating facilities are regularly flight-checked and calibrated by civil aviation inspectors. (See also item on Aeronautical Navigation, pp. 838-839).

Air Traffic Control.—The primary functions of the Air Traffic Control Division of the Department of Transport are to expedite and maintain an orderly flow of air traffic and to prevent collision between aircraft operating within controlled air space and between aircraft and obstructions on the movement area of controlled airports. This is accomplished through airport control, terminal control and area control services. These and other allied services are described below.

Airport Control Service provides control service to flights operating in the vicinity of major civil airports where the volume and type of aircraft operations, weather conditions and other factors indicate its need in the interest of flight safety. The service also includes the control of all traffic on the manoeuvring area of the airport. Control is effected by means of direct radiotelephone communication or visual signals. Airport control towers are located at: Whitehorse, Y.T.; Fort St. John, Prince George, Victoria (international), Port Hardy, Abbotsford and Vancouver, B.C.; Lethbridge, Calgary, Edmonton (industrial) and Edmonton (international), Alta.; Saskatoon and Regina, Sask.; Winnipeg (international),

Man.; Lakehead, Windsor, London, Toronto Island, Toronto (international), Ottawa (international) and North Bay, Ont.; Montreal (international), Cartierville, Quebec, Baie Comeau and Sept Îles, Que.; Moncton, Fredericton and Saint John, N.B.; Halifax (international) and Sydney, N.S.; and Gander (international) and St. John's, Nfld.

Area Control Service provides control service to en route flights operating within controlled airspace during weather conditions that prevent a pilot from seeing other aircraft or obstructions and necessitate his reliance on instruments to conduct the flight. Area control centres are located at Vancouver, B.C., Edmonton, Alta., Winnipeg, Man., Toronto, Ont., Montreal, Que., Moncton, N.B., Goose Bay and Gander, Nfld. Each centre is connected with control towers, terminal control units, communications stations and operation offices within its area by means of an extensive system of local and long-line interphone or radio circuits, and through radio communications facilities available at these stations to all aircraft requiring area control service. Area control centres are also capable of communicating directly with most pilots flying within their control areas. Each area control centre is similarly connected with adjacent centres, including centres in the United States, for the purpose of co-ordinating control of aircraft operating through more than one control area. This communications system permits each centre to maintain a continuous detailed record of all aircraft operating in accordance with the Instrument Flight Rules (IFR) and a general record of aircraft operating in accordance with the Visual Flight Rules within its control area. In addition to providing area control service to aircraft operating within controlled airspace over Newfoundland, the Gander Control Centre provides control service within the airspace over approximately one half of the North Atlantic Ocean. The Vancouver Area Control Centre also provides control service over the Pacific Ocean within the Vancouver Oceanic Control Area.

Terminal Control Service consists of the provision of separation to aircraft operating in accordance with IFR in the vicinity of all controlled airports. This service is normally provided by area control centres but separate terminal control units have been established at Calgary, Alta.; Saskatoon and Regina, Sask.; Lakehead, North Bay and Ottawa, Ont.; Quebec, Que.; and Halifax, N.S.

Northern Area Control Service, inaugurated Sept. 26, 1963, is provided by the Edmonton, Winnipeg and Goose area control centres for aircraft flying above 23,000 feet, and is available throughout more than 3,000,000 sq. miles of Northern Canada.

Radar Control Service is provided extensively in the control of IFR traffic, both in terminal areas and while en route. Terminal service is provided at Vancouver, B.C.; Calgary and Edmonton, Alta.; Regina and Saskatoon, Sask.; Winnipeg, Man.; Lakehead, Toronto, North Bay and Ottawa, Ont.; Montreal and Quebec, Que.; Moncton, N.B.; Halifax, N.S.; and Gander, Nfld. En route service is provided by area control centres and by one radar unit located at Kenora, Ont. Ground Control Approach Service is provided at Gander, Nfld. and Precision Approach Radar Service is provided at St. John's, Nfld.; Montreal, Que.; Toronto, Ont.; Winnipeg, Man.; and Vancouver, B.C.

Flight Information Service is provided by all air traffic control units, but particularly by all area control centres. It consists of advice and information useful for the safe and efficient conduct of flight, including weather reports and forecasts, field condition reports, data concerning aids to navigation, traffic information, refueling and transportation facilities, and other data of assistance to the pilot in planning or conducting a flight.

Alerting Service ensures that appropriate organizations are notified of aircraft that may be in need of search and rescue aid. This entails the maintenance and constant supervision of a continuous record of active flights to ensure that failure of an aircraft to arrive at the planned destination notified to air traffic control is detected immediately. The service is available to any pilot who files either a flight plan or flight notification with air traffic control.

Customs Notification Service facilitates the routine notification of the appropriate customs agency by pilots who plan to cross the Canada-United States boundary at certain designated customs airports. This is achieved through the prompt notification by air traffic control, at a pilot's request, of the customs officer at the destination airport of the intended arrival and of the need for customs clearance.

Airspace Reservation Service provides reserved airspace for specified air operations within controlled airspace and information to other pilots concerning these reservations and military activity areas in controlled and uncontrolled airspace. The Airspace Reservation Co-ordination Office, located at Ottawa, is responsible for co-ordinating all airspace reservations in Canada and in the Gander and Vancouver Oceanic Control Areas.

Aircraft Movement Information Service is provided by area control centres to assist the Department of National Defence in establishing the identification of all aircraft operating within specified areas.

The total number of aircraft movements at Department of Transport controlled airports in Canada during 1964 was 2,281,958.

Section 2.—Civil Aviation Operation Statistics

Table 3 provides a picture of commercial civil aviation in Canada for the years 1961-64. It shows data on miles and hours flown, traffic carried, fuel and oil consumed, employees, salaries and operating revenues and expenses, by type of service, for Canadian air carriers followed by summary statistics for both Canadian and foreign air carriers operating in Canada. Figures for Canadian carriers include domestic and international operations, and figures for foreign companies cover miles and hours flown over Canadian territory only and exclude passengers and goods in transit through Canada. Unit toll service refers to the transportation of passengers or goods at a toll per unit, whereas bulk service is the transportation of passengers or goods at a toll per mile or per hour for the entire aircraft. Other flying services comprise non-transportation services such as flying training, aerial photography and aerial patrol and inspection.

Goods carried.....lb.	250,069,070	260,084,003	275,899,568	301,265,500

Summary statistics of Canadian and foreign commercial air carriers, by type of carrier, are shown in Table 4 for 1964. For the foreign carriers, hours and miles reported are those flown over Canadian territory only and passengers and goods in transit through Canada are excluded.

It is interesting to note that the six scheduled carriers—those holding Class I or Class II licences from the Air Transport Board—accounted for 91 p.c. of all revenue passengers transported by Canadian carriers during 1964. The weight of goods transported by scheduled carriers amounted to approximately 65 p.c. of the total tonnage moved by all Canadian air carriers.

PART VI.—OIL AND GAS PIPELINES*

Oil Pipelines.—The network of oil pipelines that has been built in Canada is a complex of many systems designed to move oil as cheaply as possible from the producing fields to points of consumption, which in most cases are refineries. The Canadian network is not as vast as the United States complex or possibly that in the Soviet Union but it is at least the third largest in the world. At the end of 1964 almost 11,800 miles of oil pipelines were in operation. Almost every oilfield in Canada is served by pipeline and oil generally passes through several lines before it finally is delivered to refinery storage tanks. Refineries in Canada from the West Coast to and including Ontario receive by pipeline a wide selection of crude oils.

The prime components of the Canadian network are the main trunk lines of the Interprovincial Pipe Line Company and the Trans Mountain Oil Pipe Line Company. Both systems are described in some detail below but, in essence, Interprovincial carries crude oil eastward from Edmonton picking up and discharging oil at various locations along its length and Trans Mountain operates similarly westward from Edmonton. Feeding these two trunk lines are pipeline systems funnelling oil from hundreds of fields into storage tanks at pipeline terminals. Some of the feeder lines are impressive systems in themselves, not only in size and length of pipe but in the volumes of oil that they transport. Most of the feeder lines are in Alberta, which is to be expected because of the pre-eminent position of that province in oil production. The main pipeline terminal is Edmonton, to which are connected eight crude oil feeder lines, including the extension of the Interprovincial pipeline to Redwater, as follows:—

<i>Pipeline</i>	<i>Length</i> miles	<i>Capacity</i> bbl./day	<i>General Area of Supply Related to Edmonton</i>
Britamoil Pipe Line Co.....	410	60,000	south-southeast
Federated Pipe Lines Ltd.....	450	109,000	northwest
Imperial Pipe Line Co.....	313	83,000	southwest
Interprovincial Pipe Line Co.....	31	112,000	northeast
Pamoil Ltd.....	82	15,000	southeast
Peace River Pipe Line Co.....	600 ¹	58,000	northwest
Pembina Pipe Line Co.....	880	154,000	west-southwest
Texaco Exploration Co.....	—	111,000	south.

¹ Includes lateral line running from Fox Creek south to Trans Mountain pipeline near Edsen, having a capacity of 20,000 bbl./day.

In addition, Gibson Associated Oil Ltd. makes pipeline deliveries to Interprovincial at Hardisty east of Edmonton from fields just south of the pipeline terminal, the pipeline having a capacity of 15,000 bbl./day. Also at Hardisty, Husky Pipe Line Ltd. takes delivery of condensate from Interprovincial and delivers blended heavy crude oil from Lloydminster through a twin pipeline system having a blended crude capacity of 30,000 bbl./day. A third pipeline, Bow River Pipe Line Ltd., transports crude to Hardisty from areas as far south as Princess and thus serves the heavy oil fields east of those on the Britamoil line. Home Oil Limited has a pipeline serving refineries in the Calgary area, transporting crude from the fields northwest of the city, and also makes deliveries to the Rangeland pipeline going toward Edmonton. From the historically important Turner Valley field and other fields in the region to the west of Calgary, Valley Pipe Line Company operates a 15,000 bbl./day pipeline which transports oil to Calgary.

In British Columbia, a single oil pipeline stretches from Taylor, where the Alaska Highway crosses the Peace River, to the Trans Mountain pipeline at Kamloops, a distance of 504 miles. The capacity of the 12- and 16-inch pipeline, which carries crude oil and condensate from gathering systems and gas-processing plants in northeastern British Columbia, is 45,000 bbl./day. Serving this line are two gathering systems.

* Prepared in the Mineral Resources Division, Department of Mines and Technical Surveys, Ottawa.

Three main pipeline systems deliver crude oil from Saskatchewan fields to the Interprovincial pipeline. The smallest, with a capacity of 10,000 bbl./day is the mid-Saskatchewan pipeline of Royalite Oil Company which carries crude oil from the Coleville-Doddsland area of western Saskatchewan to the Kerrobert terminal on Interprovincial. The largest system serving Saskatchewan fields makes its delivery at Cromer, Man. This is a combined system and is made up of the Producers Pipelines Ltd. numerous gathering systems and the main trunk line of its wholly owned subsidiary, Westspur Pipe Line Company. There are 185 miles of main trunk line, looped between Steelman and Cromer, and capable of delivering 175,000 bbl./day to Interprovincial. Also linked to this line is the pipeline of Trans Prairie Pipelines Ltd. which makes deliveries to the Steelman terminal from fields farther west. The South Saskatchewan Pipe Line Company pipeline serves the medium-gravity, crude oil fields in the far southwestern part of the province and carries crude to refineries at Moose Jaw and Regina and to the Interprovincial terminal at Regina. It has about 320 miles of pipe and can deliver up to 59,000 bbl./day.

In Manitoba there is only one pipeline bringing crude from the fields located between Brandon and the Saskatchewan border. Here, Trans Prairie operates a system that can deliver volumes up to 23,000 bbl./day.

Interprovincial Pipeline.—Canada's longest oil pipeline, the system of Interprovincial Pipe Line Company, including its wholly owned subsidiary in the United States, Lakehead Pipe Line Company Incorporated, has a right-of-way length of 2,025 miles including a lateral to Buffalo, N.Y., of 95 miles. Total pipeline mileage in the right-of-way was 3,481 at the end of 1964. The system has two complete oil lines from Edmonton to Superior, Wis., and in certain sections there are three. The pipeline can deliver 15 grades of crude oil. Capacity of the various sections of the pipeline is shown below with 1964 year-end capacity and capacity after intended 1965 construction is completed.

<i>Section</i>	<i>1964</i>	<i>1965</i>
	<i>bbl./day</i>	<i>bbl./day</i>
Edmonton-Regina.....	363,000	364,000
Regina-Cromer.....	370,000	428,000
Cromer-Gretna.....	538,000	575,000
Gretna-Clearbrook.....	490,000	543,000
Clearbrook-Superior.....	496,000	533,000
Superior-Sarnia.....	416,000	434,000
Sarnia-Port Credit.....	193,000	220,000
Westover-Buffalo.....	36,000	36,000

Interprovincial serves 26 refineries as follows: one at Lloydminster via the Husky pipeline; one at Saskatoon via Saskatoon pipeline from Mildren; one at Moose Jaw via B-A Saskatchewan pipeline from Stony Beach; two at Regina; one at Brandon via Anglo Canadian pipeline from Souris; two at Winnipeg via Winnipeg pipeline from Gretna; 11 in the United States either directly or through connecting carriers; three at Sarnia; two at Oakville; one at Clarkson; and one at Port Credit.

Trans Mountain Pipeline.—The system of Trans Mountain Oil Pipe Line Company extends from Edmonton to Vancouver via Jasper and has a right-of-way length of 780 miles, including 57 miles in the United States which are owned by a wholly owned subsidiary of Trans Mountain. However, there are two 51-mile loops in the Canadian system so that total mileage of pipe is 882 miles. The capacity of the line is 250,000 bbl./day. Trans Mountain serves eight refineries—one at Kamloops, four at Vancouver and three in the Puget Sound region of Washington State.

Montreal-Portland Pipeline.—The Montreal refinery centre is served by a 236-mile pipeline which is a joint system of Montreal Pipe Line Company and its wholly owned subsidiary in the United States, Portland Pipe Line Corporation. This line takes delivery of tanker-borne crude oil at Portland, Maine. The line can deliver 272,000 bbl./day and serves all six of the refineries at Montreal.

Product Pipelines.—There are a number of product pipelines operating in Canada that constitute part of the oil pipeline industry. Perhaps, in the strictest sense, all are not product pipelines since there is often a connotation with product pipeline which denotes refined petroleum products and at one time pipeline transportation of products usually meant gasoline and the distillate fuel oils. Heavy fuel oils are not normally transported by pipeline. However, in more recent times and particularly since the emergence of liquid hydrocarbon production from gas fields, principally in Alberta, other classes of pipeline have come into operation. Some of these are classed with crude oil pipelines because they move condensate or pentanes plus which need further processing but most also move propane and butane which are finished products. Whether they are crude or product pipelines is not important but they are described below to complete the picture of Canadian oil pipelines.

There are three pure product lines in Eastern Canada, all supplying markets in Ontario. Two pipelines, Sun-Canadian Pipe Line Company and Sarnia Products Pipe Line, run from refineries at Sarnia to bulk plants in London, Hamilton and Toronto. Trans Northern Pipe Line Company, once a pipeline carrying products from Montreal to markets in Ontario as far west as Hamilton, now is a divided line. Products from Montreal are carried only to the area from Brockville east, including the Ottawa valley; products from refineries west of Toronto are carried eastward as far as Kingston.

In Western Canada, the recently constructed Petroleum Transmission Company pipeline carries propane, butane and pentanes plus from a plant at Empress in Alberta to Winnipeg in Manitoba, a distance of 578 miles. The predominant product carried is propane which is marketed at various locations along the line. Elsewhere in Alberta, the Rimby Pipe Line Company transports condensate from the Rimby gas plant and from the Rangeland condensate pipeline serving areas north of Calgary to Edmonton. Also going to Edmonton are three separate pipelines, one each for propane, butane and pentanes plus, running from the Leduc conservation gas plant. Near Calgary, Home Oil Company operates a condensate pipeline to serve refineries there and also to make deliveries to the Rangeland condensate pipeline. There are other condensate pipelines in Alberta, most of which are primarily associated with production and do not serve end users.

Pipeline Tariffs.—Typical of the charges to move crude oil are the following pipeline tariffs:—

	<i>Charge</i>	<i>Distance</i>
	cts. per bbl.	miles
Edmonton to Vancouver.....	40.0	718
Edmonton to Regina.....	43.2	438
Edmonton to Winnipeg.....	29.6	847
Edmonton to Sarnia.....	43.0	1,743
Edmonton to Port Credit.....	51.0	1,899
Portland to Montreal.....	10.5	236

Natural Gas Pipelines.—Few countries are fortunate enough to possess large resources of natural gas and sufficient markets to justify construction of country-wide networks of gas pipelines. Canada has become one of those few only within the past decade.

It was not until 1958 that Canadian natural gas was used in all provinces from Quebec westward. The development of gas gathering systems within the fields, of gas-distribution systems in the consuming areas, and of main transmission systems joining the two reached the position where, at the end of 1964, there was a total of over 41,800 miles of gas pipelines in Canada—4,958 being gathering, 13,274 being transmission and 23,574 being distribution.

Unlike oil pipeline companies which are common carriers (i.e., they do not own the oil in their lines), gas pipeline companies, with few exceptions, own the gas they transport. The principal exception is the Alberta Gas Trunk Line Company which transports virtually all of the gas exported from the province to the Alberta boundary where main transmission

lines take delivery. This is a significant pipeline because most of the Canadian gas resources are in Alberta. Alberta Gas Trunk has three complete systems: the Plains Division, which carries gas consigned to Trans-Canada Pipe Lines Limited and can deliver 1,275,000,000 cfd. (cubic feet a day); the Foothills Division, which carries gas consigned to Alberta Natural Gas Company (part of the system that goes southward through Idaho to as far as California) and Canadian Montana and can deliver 665,000 cfd.; and the Northern Division, which serves Westcoast Transmission Company and can deliver 58,000 cfd.

General details of the main transmission systems are given in the following paragraphs.

Trans-Canada Pipeline.—The Trans-Canada pipeline, extending from the Alberta border near Burstall, Sask., makes its way roughly eastward through Saskatchewan and Manitoba to the Lakehead cities of Port Arthur and Fort William and then follows a broad, northerly-arched route through the clay belt of Ontario, then southward via North Bay to Toronto. Here the line divides, one part going to the westerly regions of Ontario and the other eastward along the northern shore of Lake Ontario and the St. Lawrence River to Montreal. Lateral lines serve communities that are not within the immediate reach of the main pipeline. Trans-Canada is Canada's longest pipeline with a right-of-way distance of 2,145 miles not including laterals, such as the spur line from near Winnipeg to the United States border where up to 200,000,000 cfd. may be exported. Another, although less important from the volume viewpoint, is a line to the State of New York which crosses the St. Lawrence River near Cornwall. Trans-Canada can deliver to distribution companies and for export some 1,240,000,000 cfd.

Westcoast Transmission Company.—The Westcoast pipeline picks up most of its gas from fields in the northeastern portion of British Columbia. It runs roughly southward to Vancouver and to the United States border near Sumas, B.C. Although it takes delivery of some Alberta gas from Alberta Gas Trunk, the company has a gathering system in Alberta in the general region east of Dawson Creek. Westcoast also gathers gas from other fields in British Columbia and in 1964 completed an extension to the far northern reaches of the province near Fort Nelson. Capacity of the Westcoast pipeline to deliver gas to distributors and for export is over 500,000,000 cfd.

Alberta Natural Gas Company.—The Alberta Natural Gas pipeline is only 107 miles in length and extends through the Crowsnest Pass to Kingsgate, B.C., where it crosses the border into the State of Idaho, which line eventually proceeds to California. Gas in this pipeline is owned in part by Westcoast for its export market in the Pacific northwest United States and in part by Alberta and Southern Gas Co. Ltd. on behalf of a California utility company.

Other Gas Pipelines.—Canadian Montana takes gas from Alberta via Alberta Gas Trunk in the western part of the province at Carway, south of Cardston and through its own gathering facilities in the southeastern part of the province. The Saskatchewan Power Corporation owns and operates a gathering transmission and distribution system in Saskatchewan and buys some gas directly from Trans-Canada Pipe Lines Limited. In Ontario, Union Gas Company operates a gathering and distribution system in the southwestern part of the province.

Oil Pipeline Statistics.*—There were 42 oil pipeline companies operating in Canada at the end of 1964. Pipeline deliveries shown in Table 1 were made to non-pipeline carriers, foreign pipelines, and terminals including refineries and distributing centres.

* Statistics of oil pipelines are given in greater detail in the DBS monthly report *Oil Pipe Line Transport* (Catalogue No. 55-001).

Gas Pipeline Statistics.—As already stated, the natural gas transport industry became a significant factor in the Canadian economy in 1957 with the completion of the first of several extensive pipelines constructed to transport natural gas from the field or processing plant to distribution outlets. Consequently, the distribution industry also greatly increased deliveries to consumers from that time. Tables 3 and 4 illustrate this expansion for the years 1961-64.

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii of this volume.

Communications media in Canada have been shaped to meet the needs of the country. Great networks of telephone, telegraph and radio services, inextricably bound together, provide adequate and efficient service which, in this era of electronic advancement, is under continual technological change and development. The familiar challenges of the country—its size, its topography, its climate, its small population—which have reared their heads in other areas of development, have had to be faced as well in the field of communications. That these have been met is evidenced by the fact that today Canada possesses communication facilities and services second to none in the world.

Section 1.—Telecommunications*

During the past half-century, Canada has experienced tremendous economic expansion. Population growth and the advance to new industrial frontiers have been matched by an upward surge in national productivity and general standard of living. Continuing development of Canada is dependent on both individual pioneering and the co-operative efforts of many industries and the telecommunications industry is filling a vital role in this drama of growth.

Business and industry have expanded and ventured into isolated areas assisted and promoted by Canadian telecommunications industries which have anticipated the needs of the future with vast programs of development in virgin territories. Technological development has been particularly important to the extension of telecommunications in Canada. To meet the demands placed upon it, the industry has constantly introduced newer and better equipment, tools and methods of operation. In the growth of urban centres, the development of rural communities and the pioneering of new territory, Canadian telecommunications agencies through the years have sought to provide the highest quality of service for the greatest number of people. The major railways, the

* Subsections 1 and 4 to 7 were revised in the Telecommunications and Electronics Branch of the Department of Transport, Ottawa. Textual data in Subsection 2 were prepared by The Bell Telephone Company of Canada, Montreal, and in Subsection 3 by Canadian Pacific Telecommunications Department, Montreal. Statistical material of Subsections 2 and 3 was revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics.

hundreds of co-operating telephone companies, the radio and television companies and federal communications organizations work together with a common purpose—building networks of telecommunications from coast to coast.

The major railways, the Canadian National and Canadian Pacific, in addition to meeting their own railway communication needs, provide a wide range of services including telegram and cablegram service, data processing systems, radio and television network services, facsimile and wire photo services, telemetering, complex teletype and data switching centres, and other forms of voice and record communications. At the end of 1964, there were about 8,000 customer installations in Canada for Canadian National-Canadian Pacific telex service; each installation has access to the other and also to world-wide telex networks in other countries.

In 1963, Canadian National-Canadian Pacific completed construction of a high-grade microwave radio relay system between Montreal and Vancouver. This system is capable of carrying 600 voice channels which are used for the transmission of all forms of voice and record communications and can be expanded readily by the addition of radio channels to provide network television service or increased circuitry for general communications use. This system links up with the railway microwave facilities running east from Montreal to St. John's in Newfoundland and thus completes the railways' transcontinental microwave capability. In 1965, CN-CP constructed a microwave link between Toronto and Buffalo to provide interconnection with the Western Union Telegraph Company's microwave system in the United States.

Increased civil and military interests in the Canadian northwest have created a need for all forms of communications services and to meet this need the Canadian National Telecommunications (CNT) has undertaken several major projects:—

- (1) A 1,200-mile microwave system between northern Alberta and the Yukon-Alaska border was completed in July 1961. Starting at Grande Prairie, 450 miles north of Edmonton, this network proceeds northward through Alberta, crosses the northeast corner of British Columbia and, following the Alaska Highway through Yukon Territory, joins an interchange system at Mount Dave on the Yukon-Alaska border. At Grande Prairie, the system joins the Alberta Government Telephones system running southward through Alberta to the Canada-United States border, where it connects with United States networks.
- (2) Construction was completed in mid-1961 of a land-line communications network stretching around Great Slave Lake from Fort Smith on the Alberta-Northwest Territories border to Yellowknife, bringing the full range of communications services to residents of Yellowknife, Fort Rae, Fort Providence, Hay River, Pine Point and Fort Smith. This network is connected to the 'outside' by a microwave system between Hay River and Edmonton; the section of the microwave system within the Northwest Territories was constructed by CNT and the Alberta section by Alberta Government Telephones.
- (3) Construction was completed in late 1962 of a tropospheric scatter communications system that extends from Hay River in the Northwest Territories to Lady Franklin Point on Victoria Island in the Arctic Archipelago. This system is used for defence purposes and enables CNT to provide various types of communication service to such outlying communities as Coppermine and Cambridge Bay.
- (4) A 1,200-mile telephone pole-line is under construction down the length of the Mackenzie River from Hay River to Inuvik which, when completed in 1966, will provide simultaneous long-distance telephone, teletype, telex, commercial telegraphs, air operational and weather communications to Fort Simpson, Wrigley, Fort Norman, Norman Wells, Fort Good Hope and Inuvik; Aklavik, Fort McPherson and Arctic Red River will be linked to the system at Inuvik by very-high-frequency radio communications. Service will be instituted at successive communities as construction of the line proceeds northward.

Subsection 1.—Government Control over Telecommunications Agencies

Telephone and telegraph companies incorporated under the Federal Parliament are subject to the jurisdiction of the Board of Transport Commissioners in the matter of rates and practices under the provisions of the Railway Act (see pp. 757-758); other companies are responsible to provincial regulatory bodies. International telegraph and telephone communications are handled subject to the International Telecommunication Convention

and the Regulations thereunder and/or under regional agreements. Tolls charged to the public for radio communication service are subject to the provisions of the Regulations made under the Radio Act. Overseas cables landed in Canada are subject to the External Submarine Cable Regulations under the Telegraphs Act.

Radio communications in Canada, except for those matters covered by the Broadcasting Act, are regulated under the Radio Act and Regulations and also under the Canada Shipping Act and Ship Station Radio Regulations. In addition, radio communication matters are administered in accordance with the International Telecommunication Convention and Radio Regulations annexed thereto; the International Civil Aviation Convention; the International Convention for the Safety of Life at Sea; the Inter-American Telecommunication Convention and the Convention between Canada and the United States of America relating to the operation by citizens of either country of certain radio equipment or stations in the other country; and also in accordance with such regional agreements as the Agreement between Canada and the United States for the Promotion of Safety on the Great Lakes by Means of Radio, the Agreement between Canada and the United States relating to the Co-ordination and Use of Radio Frequencies Above Thirty Megacycles per Second, the Inter-American Radio Agreement, the North American Regional Broadcasting Agreement, the Canada-USA Television Agreement and the Canada-USA FM Agreement (see also p. 836).

National radio broadcasting in Canada entered its present phase in 1936 when, with the passage of the Canadian Broadcasting Act, the Canadian Broadcasting Corporation replaced the Canadian Radio Broadcasting Commission. The Act gave the Corporation wide powers in the operation of a national broadcasting system and gave to the Minister of Transport the technical control of all broadcasting stations.

During 1958 the Government established a Board of Broadcast Governors and the Canadian Broadcasting Corporation Board of Governors was abolished. The Board of Broadcast Governors regulates the establishment and operation of networks of radio and television broadcasting stations, the activities of public and private broadcasting stations and the relationship between them, in the interest of providing a national broadcasting service of high standard, basically Canadian in content and character. Although the Minister of Transport is the licensing authority under the Radio Act, the Broadcasting Act requires that applications for broadcasting station licences or for any change in an existing broadcasting station be referred to the Board of Broadcast Governors for its recommendation before being dealt with by the Minister. (See also pp. 841-842.)

Subsection 2.—Telephones

Alexander Graham Bell first transmitted human speech through electrically energized equipment in March 1876 and a few months later, in August, he successfully completed a call from Brantford to Paris, Ont., the first long-distance telephone call in the world. In the months after, as the instrument was perfected and the public became increasingly aware of its potential, telephone exchanges began to spring up across the nation. Rival companies were established in the same towns and cities and, in places, local subscribers discovered that they needed to subscribe to two different companies if they wished to have access to all the other telephones in their town. As a result, it soon became evident that the telephone industry, because of its mechanical limitations, could be efficient only as a monopoly in the community.

In April of 1880, The Bell Telephone Company of Canada was established by Act of Parliament and was authorized as the official agent for telephone service in 32 cities and towns across the country. However, in the embryonic stages of the industry, one company could scarcely develop and organize service over such a vast and growing nation and for this reason a separate company was formed in British Columbia to handle the communication needs of that province. A few years later, Bell Telephone withdrew from the Maritime Provinces, leaving service in the hands of local companies and again in 1908-09 the Company's territory was reduced when it sold installations and equipment to the respective

provincial governments in the Prairie Provinces. Bell Telephone now serves most Ontario and Quebec communities and parts of Labrador and the Northwest Territories.

To establish a medium for the easy interchange of calls from one company's territory to another, seven major companies worked together to form a national long-distance network. In 1931, these same companies founded the Trans-Canada Telephone System to provide a nation-wide long-distance service and to work toward the standardization of equipment and methods; an eighth company later joined the system. Members now are:—

Alberta Government Telephones
British Columbia Telephone Company
Manitoba Telephone System
Maritime Telephone and Telegraph Co. Ltd.
Saskatchewan Government Telephones
The Avalon Telephone Company, Ltd.
The Bell Telephone Company of Canada
The New Brunswick Telephone Company, Ltd.

This System provides satisfactory long-distance facilities across Canada and also acts as a clearing house to deal with the division of revenues from calls originating in one company's operating territory but terminating in another. In 1956, the Canadian Overseas Telecommunication Corporation, a Crown corporation which handles the transmission of all overseas calls originating in Canada (see p. 834), joined as an associate member. A management committee, comprising one representative from each of the eight member companies, directs the operations of the System. The committee is advised by various functional sub-committees whose members are similarly representative.

To promote co-operation and the exchange of information within the telephone industry across the nation, the Telephone Association of Canada, a non-profit organization devoted to public service, was founded in 1921. Its members comprise, in addition to the eight Trans-Canada Telephone System companies, the Okanagan Telephone Company, Ontario Northland Communications and Quebec-Telephone. Many of the more than 2,000 smaller independent telephone companies have formed other associations, such as the Canadian Independent Telephone Association, the Quebec Independent Telephone Association, and the Saskatchewan Association of Rural Telephone Companies.

Because of the peculiar distribution of the population of Canada, concentrated narrowly along the lengthy southern border, adequate long-distance communication is of great importance in the social and business life of the country. Thus, the Trans-Canada microwave system, the longest single microwave route in the world, stretching more than 3,900 miles from the Atlantic to the Pacific, is the backbone of the Canadian network. In all, the Canadian telephone industry operates more than 12,000 miles of microwave routes, simultaneously carrying many thousands of long-distance telephone calls, large volumes of data messages and a multitude of television programs for the nation's major broadcasting networks.

Because of constantly rising demand for local and long-distance service, the Canadian telephone industry has expanded and continually modernized its facilities. A number of Canadian companies have introduced Extended Area Service in many of the communities they serve, a plan that eliminates long-distance charges between the larger centres and their suburbs, and between many smaller places with a close community of interest. The cost of this service is included in the flat monthly charge for local telephone service.

Direct Distance Dialing (DDD) by both operators and customers provides faster and better long-distance service and at the same time makes the most efficient use of the industry's manpower and equipment. DDD now makes it possible for users to dial their own long-distance calls to more than 6,500,000 telephones in Canada and more than 90,000,000 in North America. Overseas telephone service is provided over facilities of the Canadian Overseas Telecommunication Corporation via cable, high-frequency radio

and satellite circuits through overseas switchboards operated by Bell Telephone in Montreal and the British Columbia Telephone Company in Vancouver. Many overseas calls are dialed direct by the overseas operators. This service is expanding rapidly with the ultimate goal of introducing world-wide customer dialing.

Numerous telephone services are provided for government, business and industry. Special conference circuits can be quickly arranged, enabling business men to discuss their affairs without moving from their desks. Radiotelephone installations link travellers with the regular telephone network, providing mobile service for such users as highway departments, trucking and construction firms, and fire, ambulance and police departments. A pocket radio signaller carried by a person temporarily leaving his telephone lets him know when there is a call for him.

Although improvement and extension of local and long-distance telephone services continue to absorb the bulk of invested money and labour, the increasing mechanization of government and business operations and the resultant need to transmit economically large volumes of information have led to the accelerated development of machine-to-machine communication. This development has been stimulated by the introduction of Data-Phone service which converts electrical impulses from business machines into tone signals acceptable to telephone circuits and again translates them at the receiving end.

Several optional services introduced recently provide great flexibility for machine-to-machine and voice-calling over long distances. Wide Area Telephone Service extends a customer's flat-rate calling to telephones within seven progressively wider zones, the largest of which includes the whole of Canada. Telpak, a private-line, intercity service, is available to organizations that transmit large volumes of information requiring an exceptionally broad band of frequencies with such equipment as computers and high-speed facsimile. It may also be used to carry simultaneously many smaller loads of information, such as voice calls and teletypewriter messages, which require relatively narrow frequency bands.

The scope and value of dial Teletypewriter Exchange Service (TWX) has been enhanced through interconnection of TWX subscribers in Canada with 60,000 TWX users in the United States and 128,000 customers in more than 100 overseas countries. This link makes it possible for TWX users to exchange typewritten information and certain low-speed data over the regular telephone network. Handwritten messages or sketches can be transmitted over private lines or over the regular telephone network through Data-Phone sets.

A Canadian telephone development for business use is Business Interphone. This provides versatile, hands-free intercommunication and regular telephone service in a single instrument. Centrex, designed for large private telephone systems, permits incoming calls to be dialed straight through to an extension without being relayed at the central switchboard. A special type of telephone has been introduced for hard-of-hearing users. Another new service is an automatic dialer which can retain up to 290 telephone numbers in its electronic memory. Canadian telephone laboratories are working on basic research in such fields as electronic circuitry, microminiaturization, solid state physics and ferrites. Applied research has been concentrated on meeting the needs of Canadian subscribers. Touch-Tone service, featuring telephones with pushbuttons in place of the rotary dial, will become available in a growing number of communities in 1966.

The telephone industry is moving toward Electronic Switching which will permit many kinds of new services. Among these are: *Abbreviated Dialing* allowing a caller to reach a list of frequently called numbers, either local or long-distance, by simply dialing two to four digits; *Add-on Service* permitting a subscriber to bring a third party in on an established call; *Conference Service* permitting callers to set up their own conference call; *Call Waiting Service* to inform the customer that a call is waiting and permit him to hold his present connection while answering the new call; and *Transfer Service*, either pre-set or variable, to permit subscribers to have incoming calls automatically transferred to any other designated telephone.

The development of the Canadian North has required the northward extension of telephone communications. Through the provision of radiotelephone service, once-isolated missionaries, miners, government officials and traders are being linked with the world's telephone networks. In 1961, radiotelephone service was established with the opening of a high-frequency radio station at Alma, Que. In 1964, a new high-frequency radio base station was erected at Frobisher, extending the reach of the system and enabling the establishment of many new exchanges in the Far North, including Resolute on Cornwallis Island, 600 miles north of the Arctic Circle; this is the northernmost commercial telephone exchange in the world. In 1965, a very-high-frequency radio link was provided across the Strait of Belle Isle to give direct access from the national network to communities on the Island of Newfoundland. The British Columbia Telephone Company recently installed a highly sophisticated radio system from Port Hardy to Annette Island. Alberta Government Telephones, in conjunction with Saskatchewan Government Telephones, has placed a similar system in operation to link Uranium City in Saskatchewan and Fort Smith in the Northwest Territories. In Manitoba, radiotelephone service reaches out to a large number of isolated settlements and bush camps and provides communication for aircraft and boats plying Lake Winnipeg.

Recently, the Canadian National Telecommunications (CNT) has made a major entry into the field of public telephone service. In Newfoundland, it provides public telephone service at Gander and at many smaller communities; at the end of 1964 there were more than 11,500 telephones connected to CNT exchanges in that province. CNT also supplies local and long-distance public telephone service to about 7,000 subscribers in the Yukon Territory, the Northwest Territories and northern British Columbia. Some of the points served are Hay River, Fort Smith, Yellowknife, Fort Nelson, Watson Lake, Cassiar, Whitehorse, Mayo, Elsa, Keno, Dawson City, Cambridge Bay, Norman Wells and Fort Simpson.

Telephone Statistics.—The number of telephone systems in Canada has shown a slow but steady decrease over the past decade, dropping from 2,788 in 1954 to 2,296 in 1963. Co-operative systems in rural districts decreased from 2,236 to 1,993 in the period and incorporated companies from 389 to 189. The largest of the incorporated companies, The Bell Telephone Company of Canada, which operates throughout the greater part of Ontario and Quebec and in Newfoundland and the Northwest Territories, served 61 p.c. of all the telephones in Canada in both 1962 and 1963 and the British Columbia Telephone Company, also shareholder-owned, served 9.4 p.c. of the total in both years. The number of telephones in use increased by 84.6 p.c. during the 1954-63 period.

1.—Pole-Line and Wire Milage and Number of Telephones in Use, 1954-63

NOTE.—Figures from 1911 are given in the corresponding table of previous Year Books beginning with the 1938 edition.

Subsection 3.—Telegraphs

There were nine telegraph and cable companies operating in Canada during 1964 but, as already stated, telegraph service is provided mainly by the telecommunications departments of the two major railway companies (see also p. 827). The number of telegrams sent continues to decline year by year, giving way to other types of message transmission, but the number of cablegrams sent has been rising. The business of telegraph and cable companies appears to be changing from one of handling messages directly to one of leasing equipment for the transmission of messages by others. Revenues from the latter source have been rising over the past several years and have been the main factor in the steady advance in total operating revenues. Total cost of property and equipment for all telegraph and cable companies was \$425,207,000 in 1964, increasing from \$391,173,000 in 1963.

6.—Summary Statistics of Canadian Telegraphs, 1955-64

NOTE.—Figures from 1920 are given in the corresponding table of previous Year Books beginning with the 1938 edition.

Year	Operating Revenues	Operating Expenses	Net Operating Revenue	Pole-Line Mileage	Wire Mileage	Em- ployees ¹	Telegrams	Cable-grams ²	Money Transfers
	\$	\$	\$	miles	miles	No.	No.	No.	\$

¹ Excludes commission operators.

² Includes wireless messages and transatlantic telephone and telex messages.

Subsection 4.—Overseas Telecommunications Services

The Canadian Overseas Telecommunication Corporation was established in 1950 to maintain and operate external telecommunication services for the conduct of public communications by cable, radiotelegraph and radiotelephone and any other means of telecommunication between Canada and overseas points; to make use of all developments in cable and radio transmission and reception for external telecommunication services; and to conduct investigation and research with the object of improving and co-ordinating such telecommunication services with the telecommunication services of other parts of the Commonwealth. By 1965 the following services had been established: direct telegraph, telephone and telex communications between Canada and Argentina, Australia, Barbados, Bermuda, Brazil, Britain, Denmark, Finland, France, Germany, Iceland, Italy, Jamaica, Japan, the Netherlands, New Zealand, Norway, Sweden and Switzerland. Direct telegraph and telex services are operated with Belgium and Peru.

The first transatlantic telephone cable, a joint project with the British Post Office, the American Telephone and Telegraph Company, the Eastern Telephone and Telegraph Company and the Corporation, was brought into service in 1956. Apart from normal use of the system for public telephone and telegraph message traffic, capacity is available for private leased circuits. International telex service was introduced to Canada the same year and service with 106 countries is available. Since 1961 the following cables have been made available for service: the Canada-Britain 80-circuit telephone cable (CANTAT); the Canada-Greenland-Iceland 24-circuit cable (ICECAN), primarily intended to meet the North Atlantic communication needs of international civil aviation, and its connecting counterpart between Iceland and Scotland (SCOTICE); a four-party project (Canada-Britain-Australia-New Zealand), part of a Commonwealth round-the-world cable system, consisting of a Canada-New Zealand-Australia 80-circuit telephone cable (COMPAC); and the use of a number of circuits for Canadian purposes in a telephone cable system connecting Bermuda and the United States and in a telephone cable system connecting Jamaica and the United States. A five-party (Canada-Britain-Australia-New Zealand-Federation of Malaysia) project, a section of the Commonwealth round-the-world cable system, will provide, when completed in 1966, an Australia-New Guinea-North Borneo-Singapore-Malaya-Hong Kong 80-circuit telephone cable (SEACOM).

Canada is taking part in negotiations being held among the more advanced nations for the purpose of setting up a global commercial communications satellite system. A communications satellite ground station is being constructed near Liverpool, N.S., by the Department of Transport for experimental purposes. It is designed to improve the

capability of industry and government in this new field and will be available to the Canadian Overseas Telecommunication Corporation for initial direct participation in the commercial satellite system when it becomes operational. As an interim arrangement, the station will be used by the Corporation for commercial communications via the "Early Bird" satellite system. The exploitation of this new technology to supplement existing cable and other facilities and form part of an improved global network will provide a means of meeting the ever-increasing demand for overseas communication services. A list of cables landed in Canada is given in Table 7.

Subsection 5.—Federal Government Civil Telecommunications and Electronics Services

Radio regulation and radio aids to navigation services are under the jurisdiction of the Telecommunications and Electronics Branch of the Department of Transport. The functions and responsibilities of the Branch may be summarized as follows: (1) administration of the Radio Act and Regulations and the Radio Provisions of the Canada Shipping Act and Ship Station Radio Regulations; (2) research into and development of new and improved communication and electronic equipment and systems needed for aeronautical, marine, meteorological and other services; (3) construction, maintenance and operation of radio aids to marine and air navigation and of radio communication stations including procurement of the necessary equipment; (4) development of policy and plans with respect to international telecommunications by cables, satellites and other media including relations with the Canadian Overseas Telecommunication Corporation; (5) co-ordination of policy governing government use of telecommunication services; (6) administration of the leasing of land-line facilities required for all services of the Department; (7) planning of emergency measures and administration of the Emergency National Telecommunication Organization (ENTO); (8) administration of the Telegraphs Act and the Regulations thereunder covering the licensing of overseas submarine cables; (9) participation in the work of the International

Telecommunication Union and its subsidiary organs; and (10) participation in the communication and electronic activities of the International Civil Aviation Organization (ICAO), the International Air Transport Association (IATA) and the International Marine Consultative Committee (IMCO).

Licensing and Regulation of Radio Stations.—Under the Radio Act and the Canada Shipping Act it is provided that radio stations employing a form of Hertzian wave transmission, including television and radar, be licensed by the Department of Transport, unless otherwise exempted by regulation. Licensing, which provides basic control over the right to establish a radio station, involves the assigning of specific frequencies to each station. Frequencies are assigned to many types of services on a shared non-interference basis. Engineering briefs covering the selection or change of frequency, amount of power and design of the directional antenna system must be approved by the Department of Transport and, before a new broadcasting station can be licensed or before modifications can be made to an existing station, notification is sent to the signatory countries of the North American Regional Broadcasting Agreement, in the case of AM broadcasting stations, and to the United States under the Canada-USA Television Agreement and the Canada-USA FM Agreement, for television and FM broadcasting stations, respectively. The setting of standards for the equipment, installation and operation of a station provides control for efficient use of the radio spectrum. A further control is the requirement that operating personnel be subject to examination and certification.

From time to time the Department of Transport establishes standards governing the technical suitability of radio equipment for licensing in Canada and Radio Standards Specifications and Procedures are issued by the Telecommunications and Electronics Branch in co-ordination with representatives of industry. Before a licence may be issued the radio equipment must comply with the technical requirements of the applicable Radio Standards Specification and be type-approved or declared technically acceptable. Type-approval and technical acceptability briefs may be prepared and submitted by a communications consulting engineer or the necessary tests may be conducted, for a fee, at the Department of Transport Radio Regulations Engineering Laboratory, Ottawa. Approximately 1,200 units were type-approved or declared technically acceptable during the year ended Mar. 31, 1965.

Eight monitoring stations are maintained at suitable points across Canada to observe actual radio spectrum conditions using a variety of modern electronic aids, their purpose being to ensure that radio communications are conducted according to regulatory procedures and to determine causes of harmful interference.

Under the Safety of Life at Sea Convention and the Canada Shipping Act, most passenger ships and larger cargo ships must be fitted with radiotelegraph or radiotelephone equipment, primarily for distress use. Approval is given for each make and model of equipment that comes up to the required standard and, in addition, the ship station as a whole is inspected after the licence is issued and periodically thereafter. All Canadian and foreign ships are subject to inspection to ensure that they conform to the requirements of the Safety of Life at Sea Convention.

Standards have been developed for the installation of aircraft radio stations specifying the techniques and materials that may be used, and inspections of radio stations aboard civil aircraft of all operational categories are carried out at prescribed periods. In-flight inspections of the radio communications and navigational aspects of proposed new air carrier operations, encompassing both land and oceanic routes, are also made as required.

Marine and aeronautical radio operator standards and related regulations are covered by international agreement. The International Telecommunication Convention prescribes the qualifications for radio operators on mobile radio stations and the regulations made under the Radio Act provide for the examination and certification of operators, both professional and amateur.

Number of Radio Stations Licensed in Canada.—The number of licences in effect for radio stations in Canada during the year ended Mar. 31, 1965 was 136,912 compared with 118,354 in 1963-64. These figures include stations operated by departments of federal, provincial and municipal governments, stations on ships and aircraft registered in Canada and mobile stations operating in public and private land mobile services, but do not include private commercial broadcasting licences.

<i>Item</i>	<i>Year Ended—</i>	
	<i>Mar. 31, 1964</i>	<i>Mar. 31, 1965</i>

Certificates of Registration issued to U.S. licensees.....	1,871	1,202
Net increase of licences in effect over preceding year.....	—	18,558

¹ General radio service licences are valid for a three-year period.

Investigation and Suppression of Inductive Interference.—The Radio Act provides penalties for selling or using apparatus liable to cause interference to radio reception. Standards are developed and type approvals issued for certain classes of such equipment. The Telecommunications and Electronics Branch of the Department of Transport also provides a country-wide interference service using special investigation equipment for the purpose of tracing sources of interference and recommending cures for interference to broadcast, television and other radio reception. Cars equipped for measuring and locating sources of interference operate from offices located in 30 cities throughout Canada; 15,861 cases were dealt with during the year ended Mar. 31, 1965. Sources include power lines, auto ignitions, heavy electrical equipment, domestic appliances, electro-medical apparatus, industrial radio frequency generators and television receivers.

Regulations specifying the limits to be met by particular types of apparatus are contained in the Radio Noise Limits Order and Radio Noise Limits Order Amended. This amendment, introduced on Sept. 24, 1964, designated the limits for noise from television receivers manufactured in Canada or imported into Canada on or after Apr. 1, 1966. Certain low-powered radio transmitting and receiving equipment is exempt from the operation of the Radio Act, e.g., garage door radio controls for a number of models have been exempted and consequently may be operated without the radio station licence otherwise required.

Meteorological Communications.—Weather stations operated by the Meteorological Branch of the federal Department of Transport throughout Canada are linked coast-to-coast by means of teletype and in the remote northern areas by radio or radioteletype. The land-line teletype circuits are leased from commercial companies and the radio circuits are operated chiefly by the Telecommunications and Electronics Branch of the Department of Transport.

Weather stations on the teletype network transmit their reports directly; other stations report via commercial or radio facilities to the nearest station on the teletype line for subsequent transmission on the meteorological circuit. The reports are collected on a regional basis and then relayed to other parts of the country as required. There are two coast-to-coast teletype systems transmitting weather information, with main relay points at Vancouver, Edmonton, Winnipeg, Toronto, Montreal, Halifax, Gander and Goose Bay. These main meteorological communications centres not only handle the distribution of weather information within Canada including the Arctic, but also effect international exchange with

the United States and Europe and, through them, with many other countries. For the latter purpose, the Canadian Meteorological Branch and the British Meteorological Office share the cost of a leased duplex circuit in the transatlantic cable. Altogether, the Meteorological Branch uses 55,000 miles of teletype circuits connecting 352 teletype offices.

In addition, a facsimile network connects forecast offices, including radio facsimile transmission to Arctic stations and ships at sea. Weather charts originating at the Central Analysis Office in Montreal receive national distribution over the network. Regional transmissions of additional charts are distributed on a local basis. Altogether, the Meteorological Branch utilizes 13,600 miles of facsimile circuits, serving 81 offices.

Radio Aids to Marine and Aeronautical Navigation.—Services of the Telecommunications and Electronics Branch of the Department of Transport in aid of marine and aeronautical navigation are outlined in the following paragraphs; details may be obtained on request from the Department of Transport, Ottawa.

Marine Navigation.—Radio aids to marine navigation are provided for radio-equipped Canadian vessels and foreign ships using Canadian waters. This safety and communications service for shipping covers the East and West Coasts, the Great Lakes, the St. Lawrence River and Gulf, Hudson Bay and Hudson Strait and includes regularly broadcast weather reports, storm warnings and notices of dangers to navigation. Ships at sea may obtain medical advice from any coast station. The stations carry out communications by radiotelegraph and/or radiotelephone and many of them provide connections to land telephone lines. Halifax (VCS) and Vancouver (VAI) stations provide a long-range radiotelephone service to ships. Halifax (VCS) and Vancouver (CKN) have radiotelegraph facilities for world-wide communications and participate in the Commonwealth long-range ship communications scheme. Coast stations on Hudson Bay and Hudson Strait, in addition to their regular services, provide commercial communications for posts of the Hudson's Bay Company and various prospecting and development organizations, make weather observations, handle administrative traffic and assist aircraft with information, landing conditions, etc.

Automatic radiobeacon stations are maintained on the East and West Coasts, the St. Lawrence River and Gulf, and Hudson Bay and Strait, giving navigational aid to mariners by transmitting signals on which bearings may be taken. These stations are arranged, where possible, in groups up to a maximum of six stations transmitting in sequence on a common frequency, the sequence being repeated continually regardless of weather conditions.

Loran is a long-range radio aid to marine and air navigation providing accurate fixes at distances up to 600 miles by day and 1,500 miles by night. Two Loran stations operate in Nova Scotia, three in Newfoundland and one on the West Coast. These stations, in conjunction with Loran stations of the United States Coast Guard, give service to ships and aircraft plying the North Atlantic and Pacific Oceans. *Decca* is a short-range radio aid to navigation providing accurate fixes at distances up to 250 miles. Four chains of Decca stations are in operation—the Newfoundland chain, the Nova Scotia chain, the Anticosti chain and the Cabot Strait chain—giving service to ships off Newfoundland and Nova Scotia and in the St. Lawrence River and Gulf.

It has become general practice to equip merchant ships with radar and important buoys are fitted with radar reflectors to increase their radar visibility. Two shore-based radar installations are in operation—one at Camperdown near the mouth of Halifax Harbour and the other on the Lion's Gate Bridge across the entrance to Vancouver Harbour. Low-powered transceivers are provided for use in emergencies at lighthouses, particularly at locations that would otherwise be completely cut off from assistance in case of illness.

*Aeronautical Navigation.**—Radio aids to air navigation are provided from coast to coast and from the Canada-United States border to the Arctic along and off the airways,

* See also the item on Air Traffic Control, pp. 815-816.

and are used by Canadian and foreign air carriers flying over Canadian territory. Six regional offices located at Vancouver, B.C., Edmonton, Alta., Winnipeg, Man., Toronto, Ont., Montreal, Que., and Moncton, N.B., carry out the construction and operation of facilities. Low-frequency radio range stations, located approximately every hundred miles along airways, provide specific track guidance to pilots by means of audible signals which may also be used to obtain direction finding bearings. In addition, radiotelephone communications are available between ground and aircraft, by which means pilots may obtain weather data, air traffic control instructions and other information concerning the safety of flights. Forty very high frequency omni-directional ranges (VOR) are in operation, a type of facility that enables the pilot to select any desired course. The 40 omni-directional ranges have permitted the establishment of VOR airways across Canada and on a number of trans-border routes in co-operation with the United States. Eleven additional installations are under construction.

Aeronautical radiobeacon stations provide radio signals with which pilots may use their direction finding equipment to obtain relative directional bearings. Fan markers operating on very high frequencies are usually placed on an airway to inform the pilot when he may safely lose altitude or to indicate accurately the distance from an airport. Station location markers, similar to fan markers, are installed at most radio range sites; they enable a pilot to determine when he is exactly over the station.

Airport and airway surveillance radars (150 nautical-mile) are in operation at 16 airports for air traffic control purposes. Precision approach radars are in operation at six major airports. Instrument landing systems (ILS) provide radio signals which permit pilots to approach airports for landing during periods of very low visibility. An installation normally consists of a localizer transmitter providing lateral guidance to the runway, a glide path transmitter for slope guidance to the approach end of the runway, two marker transmitters giving distance indications from the runway and a low-power radiobeacon (compass locator) to assist in holding procedures and lining up on the localizer course. Forty-two instrument landing systems are in operation.

Aeronautical radio communications stations are located at strategic points across the country, including the Arctic. These stations, operating for the most part on high frequencies, provide communication with domestic and international air carriers. Thirteen international communications stations, giving coverage from coast to coast and over the oceans, form a major contribution on the part of Canada to international aviation.

Subsection 6.—Public and Private Commercial Microwave Facilities

Canada, because of its population distribution and the vast areas served by microwave communication links, ranks second highest among the world's users of microwave communications systems on a per capita/per mile basis. Because of an increasing demand for television outlets, it has been necessary to extend microwave routes to provide television interconnections for the CBC English, French or private networks. With the use of more automated equipment by industry and various services, associated data and control information must be transmitted at rapid speeds over microwave radio-relay to wide areas of Canada. This Subsection gives a summary of the facilities existing or under construction at the end of March 1965.

Railways.*—The Telecommunications Departments of the Canadian National and Canadian Pacific Railway Companies have placed in operation a microwave system extending from Montreal to the Pacific Coast, which is used for television, telephone and data relay purposes. The railways also operate microwave facilities which link the Province of Quebec with the Maritime Provinces and Newfoundland. In addition, the Canadian National Telecommunications has installed a microwave system between Alberta and the Yukon Territory which carries telephone and data traffic and serves both civil and military

* See also pp. 826-827.

organizations in the area. In co-operation with Alberta Government Telephones a combination microwave and tropospheric scatter system connects Alberta and the Northwest Territories. This system is also intended to provide communication for civil and military use in Far North areas. The Quebec North Shore Labrador Railways has developed a microwave system extending into northern Quebec to provide communication for mining operations and to serve some civil communication purposes. Ontario Northland Railways has completed a microwave installation connecting northern Ontario and James Bay for purposes of military and civil communication. The Pacific and Great Eastern Railway makes extensive use of 6,000 Mc/s microwave facilities linking Vancouver with Prince George and Dawson Creek, B.C.

Telephones.—The Trans-Canada Telephone System consists of eight provincial and private systems collectively providing a transcontinental microwave system for the purpose of carrying telephone, television, data and other types of communication services. Extensive microwave systems are utilized within the respective provinces for civil and military communications or television relay purposes. Major expansion has taken place in each province, greatly increasing the number of areas served and system capacity for all types of communication requirements. Tropospheric scatter systems are employed to provide beyond line-of-sight transmissions especially to the Far North areas; these are used for both civil and military applications. The Northern Telephone Company is expanding its microwave facilities in northwestern Ontario for carrying television program material and civil communications.

Television.—The two main television interests in Canada—the CBC and CTV—lease private microwave facilities for the relay of television programs from coast to coast. In addition, studio transmitter links are used by various television stations where the television transmitter is situated some distance from the studio and interconnection is required. In sparsely populated areas, off-the-air pick-up signals from primary television stations are sometimes relayed via microwave to rebroadcasting sites. Microwave facilities are also used in connection with portable and mobile television pick-up where program material is intended for the main studio.

There has been a great increase in television coverage areas during the past year and the ensuing need for English and French program feeds via microwave relay has resulted in an expansion in the number of leased microwave circuits and new communication routes.

Industrial.—Many firms utilize existing public communication facilities on a lease basis; however, some organizations have installed private microwave systems to provide voice, teletype and control data for various purposes. The British Columbia Hydro and Power Authority, the Calgary Power Corporation, The Hydro-Electric Power Commission of Ontario, the Quebec Hydro-Electric Commission and Manitoba Hydro use a considerable number of microwave relay systems for important control and communication purposes. The Quebec Hydro-Electric Commission has greatly expanded its power generating plants and new microwave routes have been added to permit a central control of the various power generating stations through the use of microwave communication.

Subsection 7.—Miscellaneous Radio Communication Services

In addition to radio communication services provided by the Federal Government, extensive radio communication systems have been established in the provinces, mainly for police, highway and forestry protection purposes. Municipal government departments have steadily increased their use of radio to facilitate operations, particularly as a medium of communication with vehicles—police, fire, engineering, hydro, etc. Such services as taxi, heavy construction, ready-mix concrete, oil pipeline construction and operation, veterinarian and rural medical also make extensive use of radio for communication purposes.

Public utilities, power companies, provincial power commissions, oil exploration and mineral development organizations have expanded considerably their use of radio in both mobile and point-to-point radio fields.

The telephone companies provide an extension of land telephone service, by radio, to suitably equipped vehicles. This service is available in all major cities in Canada and along many of the nation's arterial highways. Restricted common-carrier mobile radio service (this service to vehicles does not permit interconnection with the over-all telephone system but only with specific dispatchers) is available in most major cities in Canada as well as in a number of smaller urban centres. The latter service is provided by telephone companies as well as by other organizations. Low-power radio stations may be licensed to permit short-distance personal and private business radiotelephone communications; since the inauguration of this service in 1962, more than 36,000 licences have been issued.

Subsection 8.—Radio and Television Broadcasting*

Broadcasting in Canada has developed over a period of some forty-seven years as a combination of public and private enterprise. Since the opening program from the first radio station was beamed into a few Montreal homes in 1918, the role of the radio and television program in the daily life of the Canadian family has grown to startling prominence. Today, radio service reaches 98 p.c. and television service over 92 p.c. of the Canadian population.

To have become such an integral force in the daily life of the nation, broadcasting had to learn the needs of the people and how to serve them. Two 'official' languages forming two distinct cultures had to be served independently but without diminishing the concept of national unity. Dozens of other smaller groups, distinct in culture and frequently dwelling in the same radio or TV coverage area but in separate communities with widely divergent program interests, had to be served. Physical problems of distance and geography had to be overcome. It requires some 360 radio transmitters and 221 TV stations and satellites to reach a population distributed across a 4,000-mile southern frontier, through seven time zones and a variety of topographical and climatic regions, and scattered northwest through thousands of square miles to the shores of the Arctic Ocean. Not only do these people have local service that is a reflection of life in their own districts, but by means of 15,000 miles of land-lines for radio networks and 8,500 miles of microwave circuits for television nearly every Canadian may, at the same time, listen or watch as an event of national interest takes place.

Since 1932, a publicly owned body, now known as the Canadian Broadcasting Corporation, created to develop a national service, has worked with the private or independent station-owner to establish this service. A more recent addition (1958) is the Board of Broadcast Governors, which consists of three full-time members including the Chairman and Vice-Chairman and 12 part-time members; the function of the Board is to "regulate the establishment and operation of networks of broadcasting stations, the activities of public and private broadcasting stations in Canada and the relationship between them, and provide for the final determination of all matters and questions in relation thereto". (See also pp. 827-828.) The Canadian Broadcasting Corporation consists of a president and a vice-president and nine other directors appointed by the Governor in Council. It is accountable to Parliament through a Cabinet Minister designated by the Governor in Council and is empowered to establish and maintain program networks and stations. (See also pp. 842-846.)

The Broadcasting Act also requires that, before dealing with any application for a licence to establish a broadcasting station (private or public) or for an increase in power, change of frequency or change of location of a broadcasting station, the Minister of Transport must receive a recommendation from the Board of Broadcast Governors. The same

* Textual information in this Subsection was revised by the Canadian Broadcasting Corporation, the Board of Broadcast Governors and the Canadian Association of Broadcasters; statistical data were prepared by the Public Finance and Transportation Division of the Dominion Bureau of Statistics.

requirement exists with respect to the making of a new regulation or changes in the Regulations under the Radio Act which affect broadcasting stations. Before making an appropriate recommendation to the Minister of Transport, the Board considers all such applications at a public hearing at which the applicant, licensees and the Canadian Broadcasting Corporation are given the opportunity of being heard.

Under the provisions of the General Radio Regulations, Part II, made under the Radio Act, the Minister of Transport must also receive a recommendation from the Board before dealing with any application to change the ownership or control of any share of capital stock in the licensee of a broadcasting station which is incorporated as a private company. The Board of Broadcast Governors has established a policy that any such application which would result in a change of ownership or control of a licensee, would be referred to a public hearing before a recommendation is made to the Minister. Applications of this kind not involving a change of ownership or control may be dealt with by the Board or the Executive Committee of the Board at a regular meeting.

Under the provisions of the Broadcasting Act, the Board has issued the Radio (AM) Broadcasting Regulations, the Radio (TV) Broadcasting Regulations and the Radio (FM) Broadcasting Regulations.

Broadcasting Facilities.—As of Apr. 1, 1965, the CBC had 30 AM broadcasting stations, five FM broadcasting stations, 16 shortwave broadcasting stations, 44 TV broadcasting stations (including satellites) and 128 low-power relay transmitters in operation. On the same date, private companies owned and operated 236 AM broadcasting stations, 51 FM broadcasting stations, six shortwave broadcasting stations and 177 TV broadcasting stations (including satellites). All but 13 of the privately owned television stations and many of the privately owned radio stations are affiliated with the CBC and help to distribute national radio and television services over networks operated by the CBC. Of the 13 unaffiliated private television stations, nine form The CTV Television Network Limited which commenced operating in the fall of 1961; the other stations, located in Quebec City, Chicoutimi, Hamilton and Montreal, are independent of network affiliation.

Operations of the Canadian Broadcasting Corporation, 1964-65

Television.—The extension and improvement of the national television service is of continuing concern to the CBC. At present about 58 p.c. of the more than 14,500,000 Canadians who speak English only or are bilingual receive the complete English-language television service through CBC stations; another 34 p.c. receive partial service from privately owned stations of the CBC English television network. There are 5,700,000 Canadians who speak French only or are bilingual. Complete television service in the French language is available to more than 63 p.c. of them through CBC stations and private affiliates provide partial service to an additional 26 p.c.

Much of the population still to be served is in small, scattered communities; approximately 50 of the 2,000 or more areas are outside the national service coverage. To bring television service to these small communities will be both difficult and costly. The Corporation continuously reviews the possibility of establishing adequate service to them and the priority list changes as circumstances change. The main factor in establishing priorities is the per capita cost, other factors being language and geographic locations, particularly the degree of isolation. The Corporation's long-range plan is to provide, as far as practicable, complete CBC national network programming, both television and radio, to all parts of Canada; the immediate goal is to fill in the gaps not now covered by CBC or affiliated stations.

Because of the rapid expansion of television over the past 12 years, CBC facilities in the large centres are dispersed throughout each. To improve efficiency, the Corporation has planned for the consolidation of the facilities in Montreal and Toronto and studies have been made for consolidation at Vancouver, Halifax, Ottawa and Winnipeg, as funds become available. During 1964-65, new television stations with studio facilities were completed at Quebec, Que., and St. John's, Nfld., the Quebec station (CBVT) being connected to the French TV network and the St. John's station (CBNT) to the English TV network. Both operate from temporary studio quarters with work proceeding on the permanent facilities. French TV network relay transmitters began operating at Cheticamp, N.S., and Timmins, Ont., with associated rebroadcasting stations at Magdalen Islands, Que., and Kapuskasing, Ont. English TV rebroadcasting stations commenced service at Red Lake, Atikokan and Fort Frances, Ont., rebroadcasting the transmissions at Kenora (CBWAT). The two Winnipeg TV transmitters (CBWT and CBWFT) were relocated south of the city and given power increases, thus extending their service areas. The establishment of production facilities and associated transmitters has a twofold purpose—through CBC-owned transmitting facilities, the complete national service is made available to the audience and, through the production facilities, the Corporation is able to tap the program resources of the area and thus eventually reflect the area to the remainder of Canada. This enables the CBC to carry out one of its essential functions, that of showing the parts of Canada to each other or, in other words, of reflecting the country to itself.

The complexities of CBC television broadcasting have greatly increased in recent years in the administrative area and as a result of the setting up of an entirely separate, wholly commercial television network (CTV). Of particular significance for all broadcasters, public and private alike, is the growth in community antenna television systems. These systems, in which the TV receivers of fee-paying subscribers are linked to a common receiving and re-transmission system, make television available to people who could not otherwise receive it and thus, in effect, extend the coverage of existing television stations. The growth of both these systems can have substantial and as yet largely unmeasured effects on television broadcasting itself. A report on the future of community antenna television in relation to ordinary television broadcasting was published by the Board of Broadcast Governors at the request of the Government.

Radio.—The current demand on CBC radio broadcasting is twofold—first, there is the need to bring service to the small percentage of the population now beyond the reach of Canadian radio and, secondly, the need to increase the amount of national service programming distributed by the national radio networks. At present, about 75 p.c. of the more than 14,500,000 Canadians who speak English only or are bilingual receive the complete English-language radio service through CBC stations, and private affiliates provide partial service to another 23 p.c. There are 5,700,000 Canadians who speak French only or are bilingual; complete radio service in the French language is available to nearly 80 p.c. of them and another 14 p.c. are within range of private affiliated stations. At present, some 90 areas with a population of 500 or more do not receive adequate CBC national radio network service. During the year ended Mar. 31, 1965, the national radio service was extended through privately owned affiliated stations to Schefferville and Sept Îles, Que., Wawa, Ont., and Duncan, B.C.

In radio, an important service is performed by low-power relay transmitters (LPRT's) in the more remote areas of Canada. These are small, unmanned radio transmitters developed by CBC engineers to relay radio network service to listeners where reception is inadequate or non-existent and installation of a manned station is impractical. They broadcast on the standard AM band to small audiences at a low per capita cost. There

were 129 LPRT's in operation in 1964-65 and 17 new ones extended radio service to new areas during the year. Eight of these (at Quinan, N.S., Rogersville, N.B., Rivière au Renard, Gagnon, Grande Vallée and Mont Brun, Que., Sturgeon Falls and Elliot Lake, Ont.) are connected to the French radio network, and seven (at Port aux Basques and Woody Point, Nfld., Red Lake, Spanish and Terrace Bay, Ont., Salmo and Fort St. James, B.C.) are connected to the English radio network. Two others (at Labrador City and Wabush, Nfld.) provide bilingual service derived from the French and English radio networks. In addition, network service was extended to the LPRT at Ocean Falls, B.C., previously programmed by off-air reception, and to CFBG, Goose Bay, Nfld. In August 1965, a new 10-kw. French radio network transmitter (CBOF) and associated studios went into service at Ottawa. Prairie listeners received improved service in October when the new 50-kw. radio transmitters at Calgary and Edmonton commenced service, replacing CBX at Lacombe. The Saint John area of New Brunswick also received improved English radio service in October with the opening of CBD, a 10-kw. transmitter at Saint John, controlled from the CBZ studios in Fredericton.

The CBC began FM broadcasting in 1947 with stations in Ottawa, Toronto and Montreal, followed in 1948 with a station in Vancouver and a French-language FM station in Montreal. Bilingual FM network service, with programming separate from AM, began in 1960 on the Toronto, Ottawa and Montreal stations. In 1962 the network was discontinued because of curtailment of operating funds. However, in October 1964, this network service resumed in English and now includes CBU-FM, Vancouver, by means of tape programming. In Montreal, French-language FM programming remains available through CBF-FM, and CBM-FM broadcasts network service in English. The Corporation has applied to the Board of Broadcast Governors for the acquisition of CFMW-FM in Winnipeg, Man., through which programming would become available to some 700,000 people in the Greater Winnipeg area. The lack of suitable frequencies for AM expansion and a strong interest by many listeners in specially designed FM programming indicate an upsurge in FM development.

Northern Service.—Since 1958, the Northern Service has broadcast by shortwave and medium-wave, in two Eskimo dialects and five Indian languages as well as in French and English, to about 75,000 people scattered over approximately 2,000,000 sq. miles. About 75 p.c. of the population is served by the medium-wave community stations which are located at Whitehorse, Y.T., the program centre for the LPRT's of the Yukon network (Watson Lake, Mayo, Elsa, Dawson, Teslin, Haines Junction, Destruction Bay and Beaver Creek in Yukon Territory and Cassiar in British Columbia); Yellowknife, N.W.T., the program centre for the LPRT's of the Mackenzie network (Hay River and Fort Smith, N.W.T., and Uranium City, Sask.); Inuvik, N.W.T., covering the Mackenzie Delta; Churchill, Man.; Goose Bay, Labrador; and Frobisher Bay, N.W.T. The Yukon and Mackenzie networks are connected to the English radio network.

Programs in the Indian and Eskimo languages, originated by local stations, were increased in number and variety and the number of programs in French and Eskimo on the shortwave service was increased. *Indian Magazine*, the first CBC program series devoted exclusively to activities of Canadian Indians, was inaugurated during 1964. Although intended for people of Indian background living in the North, it drew its material from all parts of Canada, co-operating with the National Indian Council, the Indian-Eskimo Association, Indian Friendship Centres in cities across Canada, and federal and provincial government departments dealing with Indian affairs. On shortwave, half an hour each night except Saturday is devoted to Eskimo-language programs produced in Montreal—*Uqausi* (Let's Talk), *Nunassiqmeunut* (Music for the People of the Beautiful Land)

Churchill Calling and *Frobisher Calling*. The personal radio message service for Eskimos hospitalized in Southern Canada was expanded in 1964 to include Eskimos attending vocational and academic schools and living in hostels and private residences. It was also extended to include northerners of Indian and metis backgrounds.

Armed Forces Service.—In 1964-65, the Armed Forces Service continued to provide Canadian servicemen and their dependants stationed abroad with shortwave news, live network coverage of outstanding national events, tape-recorded network shows, television films for showing in recreation centres and mess halls, and concert parties of outstanding Canadian variety artists. About three hours of news, sports and topical events were broadcast daily on shortwave and 70 hours of recorded network programs were shipped to radio stations CAE and CFN in Europe. Network broadcasts of the Stanley Cup playoffs and the Grey Cup game were made available to both stations by transatlantic telephone, thereby creating a simultaneous radio network of over 7,000 miles from Dawson in Yukon Territory to Baden Solingen on the Rhine. Concert parties went to Army and Air Force units in Europe, the Middle East and, for the first time, to Cyprus; similar concerts at Navy, Army and Air Force bases across Canada were recorded for later network broadcast.

A weekly package of CBC television programs was lent to the Armed Forces for distribution among remote bases in the Arctic, the Middle East, Indo-China and the Congo. Tape-recorded network programs were made available to the RCN for use in ships at sea and about 28 half-hour recorded network programs were supplied weekly to 14 RCAF stations on the Pine Tree and Mid-Canada Lines for broadcasting on low-power transmitters.

International Service.—In 1964-65 the International Service marked its 20th anniversary. Throughout this period there have been many changes in the purpose and scope of international broadcasting. The increased popularity of shortwave listening and the growing demand for international exchange of programs fully taxed the facilities of the International Service.

Daily shortwave broadcasts in 11 languages informed listeners of events in Canada and Canadian attitudes toward international events. The Service used English, French, Spanish and Portuguese for transmissions to Western Europe, Africa, Latin America, the Caribbean area, Australia, New Zealand and North America, and Central and Eastern Europe were served by broadcasts in German, Czech, Slovak, Russian, Ukrainian, Polish and Hungarian. New popular programs, such as the Radio-Canada Shortwave Club, and extended programs for philatelists resulted in a marked increase in the mail received by the International Service.

There was a considerable increase in the exchange of transcribed programs during the year. The exchange of transcriptions between International Service and broadcasting organizations of the western world has been well established for some time but in 1964-65 Radio Moscow approached the Service for the first time suggesting more exchanges. As a result, International Service offered Radio Moscow items wherever appropriate, including reports on the tour across Canada by the Russian pianist Sviatoslav Richter, an interview with Glenn Gould, and TV film of the visits to Canada of the Russian Minister of Agriculture and of the Russian hockey team. Also, both music and spoken-word transcriptions in stereophonic sound were offered during the year.

The English, French, Spanish and Portuguese language services produced new series of spoken-word transcriptions which were offered to virtually all radio organizations of the

many countries in their areas—the Commonwealth, Europe, Africa, Latin America and the United States. In return, International Service received a wealth of transcribed material from all parts of the world for use by domestic CBC networks. An unusual feature of the year was the assistance given by the International Service to the Easter Island scientific expedition. A technician was detailed to the expedition with equipment for a daily two-way radio link between Easter Island and Montreal. As there was no other means of communication with the Island, this shortwave link was very important to members of the expedition in communicating with their headquarters at McGill University and with their families.

International Relations.—The CBC in 1964-65 continued activity in the field of international exchange and export sales of programs. Programs such as *The 700 Million*, *The Open Grave*, *The Dark Did Not Conquer*, *Caribou Mystery*, *The Living Sea*, *The Nature of Things*, *Parade*, *Through the Looking Glass*, *Wayne and Shuster*, and several programs in the Festival series were sold to broadcasting organizations in Australia, Germany, Hungary, New Zealand, Sweden, Britain and the United States. Intertel, of which CBC is a founding member, continued production of hour-long documentaries for a world-wide audience of between 40,000,000 and 50,000,000 viewers. Since the founding of the Federation, the CBC has telecast a total of 20 Intertel documentaries.

CBC personnel seconded from their positions in Canada have continued to assist in the development of television and radio broadcasting service in the newly emerging nations of Asia, Africa and the West Indies. Technical and executive staff have been made available to these countries to assess their requirements and advise on the establishment of broadcast service. Much of this work has been undertaken in co-operation with the External Aid Office of the Canadian Government. Trainees have come from Norway, Greece, Pakistan, France, Indonesia, Japan, Burma, Colombia, Sarawak, Morocco, Malaya, Turkey, the West Indies and many other countries for on-the-job training at CBC production points across Canada in various functions applicable to broadcasting—news services, farm and school broadcasts, press relations, financial operations, administration, technical and programming matters, production, audience research and station management.

Finance.—The CBC, being a Crown corporation, is financed through public funds authorized by Parliament and through commercial advertising. In the year ended Mar. 31, 1965, commercial revenue accounted for about 27.5 p.c. of the Corporation's income. It is recognized that such revenue cannot be expected to grow significantly beyond this level, since there are no large untapped sources of advertising revenue available to television and the CBC continues to follow a policy whereby certain programs are not available to sponsorship (including news, talks and public affairs, farm and fisheries broadcasts, school broadcasts, religious and institutional broadcasts) and also deliberately restricts the quantity of commercial messages. The Corporation's efforts to increase commercial revenues are at no time allowed to influence its program decisions.

The following statement of operations shows a 7.1 p.c. increase in expenditures in 1964-65 over the previous year to the amount of \$119,318,000. Increases for the previous four years were: 1963-64, 6.5 p.c.; 1962-63, 0.7 p.c.; 1961-62, 6.6 p.c.; 1960-61, 7.4 p.c. The small increase in 1962-63, as compared with other years, is attributable to the austerity program which caused postponement of planned extensions and improvements to the national broadcasting service. The 1964-65 grant of \$85,900,000 voted by Parliament to discharge the responsibilities of the national broadcasting service was under-expended by \$30,778.

Statistics of the Broadcasting Industry

Financial and other statistics of the radio and television broadcasting industry are obtained by the Dominion Bureau of Statistics in co-operation with the Board of Broadcast Governors and the Department of Transport; summary figures are given in Table 9 for 1960-63; for 1962 and 1963, figures for the private sectors and the CBC are given separately.

The operating revenue of the broadcasting industry in 1963 amounted to \$136,200,000, an increase of 9.5 p.c. over the previous year. Of the total operating revenue, radio broadcasting accounted for \$60,600,000 or 44.5 p.c. and television broadcasting \$75,600,000 or 55.5 p.c.; in 1962, radio received \$55,900,000 or 45 p.c. and television \$68,500,000 or 55 p.c. The number of private radio and television stations reporting to DBS in 1963 totalled 239 and 63, respectively. Revenue from network and national advertising represented 62 p.c. of the total broadcasting revenue and revenue from local advertising 38 p.c.; network and national advertising, and local advertising increased by 10 p.c. and 16 p.c., respectively, over 1962; other non-broadcasting revenue decreased by 23 p.c.

Operating expenses in 1963 reached a total of \$210,000,000, an increase of 7 p.c. over 1962. The growth of revenues exceeded the growth of expenses and resulted in an operating profit of \$8,800,000 in 1963 compared with an operating profit of \$5,300,000 in 1962. After adjustment on account of other income and expenses and income taxes, the final net profit of the private sector of the broadcasting industry for 1963 was \$5,500,000 compared with a profit of \$1,800,000 in 1962. There are no CBC profits or losses in the figure of net profit because any unexpended balance of the parliamentary grant is treated as an account due to the Government of Canada.

¹ The CBC charges its operations with depreciation but deducts the charge on its published statements; the charge so made has been added to the parliamentary grant.

² Do not include advertising agency commissions, estimated at \$11,761,211 in 1962 and \$12,986,238 in 1963.

Section 2.—Postal Service

The basic tasks of the Canadian Postal Service are to receive, convey and deliver postal matter with security and dispatch. In discharging these duties it maintains post offices and utilizes air, railway, land and water transportation facilities. Associated functions include the sale of stamps and other articles of postage, the registration of letters and other mail for dispatch, the insuring of parcels, the accounting for COD articles, and the transaction of money order and Post Office Savings Bank business. Because of its widespread facilities, it has been found expedient for the Post Office to assist other government departments in the performance of certain tasks including the sale of unemployment insurance stamps, the collection of government annuity payments, the distribution of income tax forms and Civil Service employment application forms, and the display of government posters. Post offices are established wherever the population warrants. Those in rural

areas and small urban centres transact all of the functions of the city office. In larger urban areas postal stations and sub-post offices have full functions similar to the main post office, including a general delivery service, lock-box delivery and letter-carrier delivery.

The operating service of the Post Office Department is organized into 14 Districts, each under a district director. These district directors and the Postmasters, Toronto and Montreal, report directly to the Assistant Deputy Postmaster General. The Assistant Deputy Postmaster General has the responsibility of conducting the normal field operations of the Postal Service. The operating and support functions required in the provision of postal service to the public are the responsibility of the local postmasters who receive technical and administrative assistance from district offices at strategic points.

Postal service is provided in Canada from Newfoundland to the west coast of Vancouver Island and from Pelee Island, Ont., (the most southerly inhabited point of Canada) to settlements and missions far into the Arctic. Canada's airmail system provides several transcontinental flights daily, intersected by branch and connecting lines radiating to every quarter and linking up with the United States airmail system. All first-class domestic mail up to and including eight ounces in weight is carried by air between one Canadian point and another, whenever delivery can thus be expedited. Air stage service provides the only means of communication for many areas in the hinterland. There are approximately 46,000 miles of airmail and air stage routes. However, the railways are still the principal means of distant mail transport.

At Mar. 31, 1964 there were 11,260 post offices in operation and letter-carrier delivery, performed in 188 urban centres, employed over 9,000 uniformed carriers. Rural mail routes are generally circular in pattern and average about 26 miles in length. Some 1,319 side services transport mail between post offices, railway stations, steamer wharves and airports, and 1,878 stage services convey mail to and from post offices not located on railway lines. Transportation of mail by motor vehicle on highways is expanding and more than 430 such services were in operation in 1964, many of them replacing or reducing conveyance by rail. In 1964 there were 1,017 city mail services transporting mail to and from post offices, postal stations and sub-post offices, collecting mail from street letter-boxes and delivering parcel post. Over 50,000,000 miles are travelled annually on about 9,000 land mail services; both land mail and coastal mail services are performed under contract.

The larger post offices in Canada may be described as intricate industrial plants where mail is unloaded, cancelled, transported and shipped by semi-automatic means. Conveyor belts, automatic chutes and other devices increase output of mail matter without increasing staff and all the larger offices are provided with the latest mechanical equipment. In some areas householder mail is carried by mailmobile. In most cities, postage stamps may be obtained at any time from automatic vending machines, and a curbside mail receptacle in which patrons may deposit mail without leaving their automobiles is coming into use. Electronic equipment checks money orders and accounts for the \$925,000,000 annually that they represent.

10.—Post Offices in Operation, by Province, as at Mar. 31, 1963 and 1964

1964.....	235,807,940	200,774,264	206,900,000	—37,507,200 ³

¹ Gross revenue less commissions and allowances to postmasters and other small items.
of semi-staff and staff post offices.

² Excludes rental

³ In accordance with new accounting practice.

The gross revenue receipts shown in Table 11 are received mainly from postage, either in the form of postage stamps and stamped stationery, or postage meter and postage register machine impressions. Some postage is also paid in cash without stamps, stamped stationery or meter and register impressions. The gross value of the postage stamps and stamped stationery sold during 1963-64 was \$94,412,195, and receipts from postage meter or postage register impressions and postage paid in cash by other means amounted to \$124,833,831.

In the year ended Mar. 31, 1964, post office money orders, issued for any amount not exceeding \$100 and payable in almost any country of the world, were sold at more than 9,013 post offices and money orders payable in Canada only, for amounts not exceeding \$15.99, were sold at some 1,677 additional post offices. Table 12 shows the amount of money order business conducted by the Postal Service in recent years.

12.—Operations of the Money Order System, Years Ended Mar. 31, 1960-64

Year	Money Order Offices in Canada	Money Orders Issued in Canada	Value of Orders Issued in Canada	Value Payable in—		Value of Orders Issued in Other Countries, Payable in Canada

A statement on the financial business of the Post Office Savings Bank will be found in Chapter XXV on Banking, Other Commercial Finance and Insurance.

Section 3.—The Press*

Daily newspapers published in Canada numbered 119 in 1964, counting morning and evening editions separately. English and French dailies had an aggregate reported circulation of nearly 4,385,000 about 80 p.c. in English and 20 p.c. in French. Twelve of those with circulations in excess of 100,000 accounted for over 51 p.c. of the circulation.

*An article in the 1957-58 Year Book traces developments in Canadian journalism from their beginnings in 1752 to (circa) 1900. A second article appearing in the 1959 edition brings that account up to the date of writing (1958). The complete presentation is available in reprint form from the Dominion Bureau of Statistics.

French dailies, as would be expected, have their widest circulation in Quebec where 11 of the 13 in existence in 1964 were published. Some of the largest of these papers have been established in that province for over 60 years. Weekly newspapers serve more people in rural communities than do the dailies. They cater to local interests and exercise an important influence in the areas they serve.

The Canadian Press, a co-operative organization owned and operated by Canada's daily newspapers, provides its 100 members with world and Canadian news and news photographs, mostly by means of teletype and wirephoto transmission. It also serves weekly newspapers and radio and television stations. It is, in effect, a partnership through which each member newspaper provides its fellow members with the news of its particular area and through which the general news of the world is brought to Canada. Cost of editing and transmission is divided among members according to the population of the cities in which they publish. CP gets world news from Reuters, the British agency, and from the Associated Press, the United States co-operative, and these agencies have reciprocal arrangements with CP for their coverage of Canada.

The United Press International of Canada is a limited company which is associated with the United Press International World Service of which it is an affiliate. From its headquarters in Montreal, it provides Canadian and international news and pictures to over 90 subscribers in Canada as well as being the outlet of Canadian news and pictures for world distribution through United Press International facilities. Agence France Presse maintains offices in Montreal and Ottawa and certain foreign newspapers have agencies in Ottawa to interpret Canadian news for their readers.

Press Statistics.—The following tables are based on data estimated from *Canadian Advertising*. Circulation figures are given for daily English-language and French-language newspapers only. Such circulation figures are relatively easy to obtain because, in their own interest, newspapers qualify for and subscribe to the Audit Bureau of Circulation; for these, ABC 'net paid' figures have been used. On the other hand, circulation data for foreign-language newspapers, weekly newspapers, weekend newspapers and magazines are incomplete and therefore not usable.

Revenue from Printing and Publishing.—One of the industrial groups for which information is collected by the DBS in its annual Census of Manufactures is the printing, publishing and allied industries group which includes establishments engaged primarily in the publishing and printing of newspapers, magazines, periodicals, books, almanacs, maps, guides and the like, as well as establishments printing such publications for publishers, publishing firms that do no printing, and engraving, stereotyping and allied industries. Of interest in connection with press statistics is the amount of revenue received by these industries from advertising and from subscriptions or sales, which is given for the years 1962 and 1963 in Table 17. Additional data on manufacturing activity of this industrial group are included in Chapter XVI on Manufactures.

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii of this volume.

PART I.—THE MOVEMENT AND MARKETING OF COMMODITIES

Domestic trade is broad and complicated; it encompasses all values added to commodities traded, provincially and interprovincially, by agencies and services connected with the storage, distribution and sale of goods, such as railways, steamships, warehouses, wholesale and retail stores, financial institutions, etc. Taken in a wide sense, it embraces various professional and personal services, including amusement services such as theatres and sports. Only certain phases of this broad field are covered here and, wherever possible, cross references are given to related material appearing in other Chapters. The arrangement of material in a volume such as the Year Book is governed by the necessity of interpretation from various angles. The Index will be found useful in this respect.

Section 1.—Merchandising and Service Establishments*

The surveys of merchandising and service establishments centre around a census of such business establishments. The first census of this kind related to business transacted for the year 1930 and similar censuses were taken for 1941, 1951 and 1961. It should be noted that a wider range of data was available from the 1961 than from the previous censuses. Gross margin information was collected from retail stores and wholesalers; operating expense figures were collected from wholesalers and service businesses; and more

* Prepared in the Merchandising and Services Division, Dominion Bureau of Statistics.

information was sought about the operating characteristics of retailers and wholesalers. Detailed results may be obtained from the census reports.* In the 1963-64 Year Book (pp. 847-848) summary data were given for retail trade and in the 1965 Year Book (pp. 853-858) for all three trade groups—wholesale, retail and service. Certain elaborative data for these groups are given in Subsection 1 following.

The next census of merchandising and service establishments will be for 1966 and subsequent censuses will be quinquennial rather than decennial. Less detail will be collected in these censuses than previously and there will be more emphasis on sample surveys during the intercensal period for the collection of detail such as commodity content of sales of retailers, gross margin data and the analysis of sales by type of buyer. Each census forms a new base for the intercensal monthly, quarterly and annual surveys, which are sample surveys for some businesses and full coverage for others. Current information available on the distributive trades, given in Subsections 2 and 3, continues to project the 1951 base and estimates for years prior to 1951 have been revised in accordance with that base. Data related to the 1961 base will be available early in 1966.

Subsection 1.—1961 Census of Merchandising and Service Establishments

Wholesale Trade.—Results of the 1961 census of wholesale trade are summarized in Tables 1 and 2. The former gives the number of business locations, sales, inventory, employment and payroll of wholesale trade establishments, by province; the latter gives the same information for wholesale trade locations classified according to major type of operation and kind-of-business group.

* Vol. VI (Pt. 1) Census of Merchandising: Retail Trade (Series 6.1). Vol. VI (Pt. 2) Census of Merchandising: Wholesale Trade; Services (Series 6.2).

Retail Trade.—Summary information from the 1961 census of retail trade is presented in Tables 3 and 4. Table 3 gives the number of stores, sales, inventory, employment and payroll, by province, and Table 4 gives the percentage distribution of total retail sales in each province by main commodity group. Retail sales are usually presented by kind of business, i.e., grocery stores, department stores, etc., but the classification by commodity group gives estimated sales of commodities regardless of types of store in which they are sold. The 1965 Year Book, at pp. 855-856, gives retail trade locations and sales by kind of business, and locations and sales in metropolitan areas, major urban areas and other urban centres with 30,000 or more population.

¹ Includes other establishments not classified.

² Figures withheld to avoid disclosure of individual operations.

Subsection 2.—Wholesale Trade (Intercensal)

Total sales of wholesalers, estimated from the results of intercensal sample surveys, have shown a continuously upward trend over the past decade, reaching a record amount of \$11,148,000,000 in 1964. As indicated in Table 7, all business groups reported increases in 1964 over 1963 with the exception of coal and coke and the decline for this group was very small.

7.—Wholesale Sales, by Kind of Business, 1960-64

NOTE.—Includes only wholesalers proper, i.e., firms performing the function of buying merchandise on their own account for resale.

Subsection 3.—Retail Trade (Intercensal)

The trend of retail trade is one of the best general indicators of the economic condition of the country. It is through retail stores that most goods are ultimately sold and such sales reflect the financial strength of the consumer except in times of short supply. The value of retail sales, estimated from intercensal sample surveys, increased by 53 p.c. during the period 1955-64. Estimates, by province and by kind of business, for 1960-64, not adjusted for price changes, are shown in Table 8.

¹ Includes the Yukon and Northwest Territories.
because of rounding of the figures.

² Totals are not the exact addition of the components

Farm Implement Sales.—The value, at wholesale prices, of new farm implements and equipment sold in 1963 amounted to \$287,839,000, an increase of 20.5 p.c. over the value of such sales in 1962. Decreases in the Atlantic Provinces and British Columbia were more than offset by substantial increases in the other provinces. In addition to the amount spent on new machinery, \$49,721,863 was spent in 1963 for repair parts, 13.3 p.c. more than in 1962.

9.—Sales of Farm Implements and Equipment, by Province and by Major Group, 1959-63

Sales Financing.—As shown in Table 11, the amount of instalment financing transacted by sales finance companies reached a record level in 1963, paper purchased and balances outstanding being higher than in 1962 for every type of goods except radio and television sets, household appliances, furniture, etc.

Consumer Credit.—Total balances outstanding on credit extended to consumers by retail stores and certain financial institutions are increasing very rapidly. Although the financial institutions included in the survey do not cover all sources of consumer credit, returns from the selected holders indicate that balances outstanding on credit extended to individuals for the purchase of consumer goods and services have more than doubled since 1955. The figures in Table 12 do not include credit extended for commercial purposes.

Accounts outstanding on the books of retailers stood at \$1,242,600,000 at the end of 1964. Lumber and building material dealers and farm implement dealers, at one time included in these figures, have been omitted since 1958 so that the results now approximate more closely "consumer" credit.

Subsection 4.—Service Establishments (Intercensal)

Motion Picture Theatres.—The receipts of motion picture theatres reached a peak in 1953 when they amounted to \$108,604,000; since then they declined each year to \$67,748,000 in 1962 but rose to \$71,641,505 in 1963. The number of regular theatres in operation continues to decrease although drive-ins show some advance in both number and receipts.

Motion Picture Production.—In 1963 there were 69 private firms producing and printing motion picture films and filmstrips for industry, government, education, entertainment, etc. These firms employed 949 persons, paid out \$3,812,000 in salaries and wages and had a gross revenue of \$12,115,269. Films were also produced by government agencies but operating information concerning such production is not available. In addition, ten firms in other business categories produced films in 1963 (38 entertainment and documentary films for television use, three non-theatrical films, 34 commercial advertising films for television, one silent motion picture film and 165 other films). This production brought in revenue amounting to \$79,762.

Table 15 shows types of film produced by private industry, classified by major producing region, and by government agencies during 1963. Altogether, these agencies produced 73,059,176 feet of 16mm. film in black and white, 9,642,490 feet of 16mm. film in colour, 16,547,522 feet of 35mm. film in black and white and 1,143,122 feet of 35mm. film in colour.

Hotels.—In 1962 there were 4,983 hotels in operation in Canada, 4,327 of them full-year hotels and 656 seasonal. Table 17 shows the provincial distribution of these establishments, together with the sources of their revenue for 1962 with totals for 1958-62.

Section 2.—The Marketing of Agricultural Products

Subsection 1.—The Grain Trade, 1963-64

Total production of the five major Canadian grains—wheat, oats, barley, rye and flaxseed—in 1963 amounted to 1,431,172,000 bu., 14 p.c. higher than the 1962 level of 1,253,138,000 bu. but still 5 p.c. lower than the record 1952 outturn of 1,500,347,000 bu. At the same time, carryover stocks increased from 537,006,000 bu. in 1962 to 734,919,000 bu. in 1963, so that domestic supplies amounted to 2,166,291,000 bu. in 1963-64, some 21 p.c. greater than the 1,790,232,000 bu. of the previous season. Total marketings in the Prairie Provinces during the crop year 1963-64 amounted to 735,653,000 bu., 10 p.c. above the comparable 1962-63 level of 666,658,000 bu. and 28 p.c. above the ten-year (1952-53—1961-62) average of 572,912,000 bu. Reflecting increased shipments of wheat, wheat flour, barley and flaxseed, total exports of the five major grains and their products reached a record 679,381,000 bu., some 75 p.c. higher than the 1962-63 figure of 388,320,000 bu. and 60 p.c. above the ten-year average of 423,956,000 bu.

Disappearance of these grains into domestic channels in 1963-64 was estimated at 716,192,000 bu., an increase of 7 p.c. over the 1962-63 total of 666,994,000 bu. Despite the sharp increase in exports and the substantial increase in domestic utilization, total production of the five grains more than offset disappearance and, as a result, carryover stocks at July 31, 1964 amounted to 770,721,000 bu., 5 p.c. larger than the 734,919,000 bu. at July 31, 1963.

In 1963-64, marketings of wheat, oats and barley continued under the compulsory crop-year pools system of the Canadian Wheat Board. As in the preceding year, an initial quota of 100 units was in effect at local delivery points at the beginning of the marketing year. Permit holders were entitled to deliver a maximum of 300 bu. of wheat or 800 bu. of oats or 500 bu. of barley or 500 bu. of rye or any combination of these grains which, when calculated on a unit basis, did not exceed 100 units. This initial unit quota was followed by

general quotas based upon bushels per specified acre. Specified acreage consisted of each permit-holder's acreage seeded to wheat (including Durum), oats, barley and rye, the summer fallow acreage and the eligible acreage seeded to cultivated grasses and forage crops. Durum wheat was not included in the specified acreage for the 1962-63 crop year, but in 1963-64 became part of the producers' specified acreage for quota purposes. The first general quotas were established at all delivery points in early September and were extended and increased as local country elevator space became available. The flaxseed delivery quota of 5 bu. per seeded acre or 200 bu., whichever was the larger, was increased on Dec. 9 to 8 bu. per seeded acre or 325 bu. and on Jan. 22, 1964 it was declared open for the remainder of the 1963-64 crop year. The initial rapeseed delivery quota of 7 bu. per seeded acre or 300 bu., whichever was the larger, was raised on Aug. 21 to 10 bu. per seeded acre or 700 bu. and on Sept. 2 it was declared open for the remainder of the crop year. Rye, which was contained in the specified acreage, was placed on an open delivery quota on Mar. 30, 1964, and a number of supplementary delivery quotas were established on oats and barley.

Because stocks of grain in both country and terminal elevators on Aug. 1, 1963 were at the high level of 547,509,000 bu., delivery opportunities at country elevators were limited during the first few weeks of the crop year and quotas advanced slowly. However, the strong demand for wheat that developed early in September necessitated the movement of large volumes of grain from country positions during the September-January period and the space thus created in country elevators permitted a steady advance in delivery quotas even though large volumes of grain were being marketed at each quota level as a result of record yields in most areas. By the end of the first half of the crop year, most delivery points were on a quota of 4, 5 or 6 bu. per specified acre. Although the grain movement from country positions was reduced during February and March when navigation was closed on the Great Lakes, it continued at a relatively high level and then increased to average about 82,000,000 bu. a month during the last quarter of the crop year. By the second week in June all delivery points were on an 8-bu. specified acreage quota.

On May 7, 1964, the Board announced a change in the administration of delivery quotas. On May 11, 1964, a Wheat Board change in the administration of delivery quotas became effective. The maximum specified acreage quota for the 1963-64 crop year was set at the 8-bu. level, with additional quotas to be granted on the basis of a supplementary quota on individual grains. All delivery points on an 8-bu. quota on that date were given a supplementary wheat (other than Durum) quota of 5 bu. per acre seeded to wheat or 300 bu., whichever was the larger. As the quotas at other delivery points were raised to the 8-bu. level they were automatically placed on the 5-bu. supplementary wheat quota. The change was necessary to ensure that there would be sufficient quantities of wheat in the marketing pipeline to meet extremely heavy sales commitments and to avoid congesting marketing facilities with grain that was not immediately required for the market. On June 22, 1964, the supplementary quota on wheat was increased to the larger of 10 bu. per acre seeded to wheat or 600 bu. By the end of the crop year all of the 1,910 delivery points in the Western Division were on the 8-bu. per specified acre quota and the 10-bu. per seeded acre supplementary wheat quota. Soft white spring wheat was contained in the specified acreage and in the supplementary wheat quotas.

Wheat.—Supplies of wheat for the 1963-64 crop year reached an all-time high of 1,210,692,000 bu., reflecting an increase in carryover stocks from 391,058,000 bu. in 1962 to 487,247,000 bu. in 1963, combined with the record 1963 production of 723,412,000 bu. Supplies were 27 p.c. greater than the 1962-63 total and 5 p.c. greater than the previous peak established in 1956-57. Exports of wheat and wheat flour in terms of wheat reached an all-time high of 594,548,000 bu., 79 p.c. greater than the quantity exported in the preceding year and 46 p.c. greater than the previous record set in 1928-29. Domestic disappearance of wheat was 156,704,000 bu. as compared with the 1962-63 figure of 138,011,000 bu. Total disappearance, amounting to some 751,252,000 bu., more than offset the record production and, as a result, carryover stocks at July 31, 1964 were 459,440,000 bu. compared with 487,247,000 bu. at July 31, 1963.

The initial payment for Western Canadian wheat in the 1963-64 crop year was \$1.50 per bu., basis No. 1 Northern in store Fort William-Port Arthur or Vancouver. There were no adjustment or interim payments on the 1963-64 wheat pool but on Mar. 2, 1965 the final payment was announced. Producers delivered a record 563,875,000 bu. of wheat to the 1963-64 pool, including 43,425,000 bu. of Durum wheat, which was the largest volume ever delivered by producers to the Board in a crop year. The amount of the final payment distributed to producers was a record \$271,964,000, of which amount \$18,376,000 was distributed to producers of Durum wheat. After deducting the Prairie Farm Assistance Act levy, the average final payment on spring wheat (other than Durum) was 48.725 cents per bu. and the average final payment on Durum grades was 42.317 cents per bu. The total payment for No. 1 Northern, basis in store Fort William-Port Arthur or Vancouver and prior to deduction of the PFAA levy, was \$1.97366 per bu.

The crop year 1963-64 coincided with the second year of the fifth three-year International Wheat Agreement (IWA) which became effective Aug. 1, 1962. Sales under the Agreement continued to be quite widely distributed with 28 of the 38 importing countries included in the pact purchasing wheat and/or flour from Canada. Purchases of Canadian wheat and flour under the terms of the IWA amounted to the equivalent of 245,018,000 bu. and accounted for 37 p.c. of total sales under the Agreement. IWA shipments to Britain

amounted to some 90,832,000 bu. and the other major importers were as follows: Japan, 49,812,000 bu.; Federal Republic of Germany, 37,277,000 bu.; Belgium and Luxembourg, 15,709,000 bu.; Switzerland, 8,072,000 bu.; Venezuela, 7,904,000 bu.; Philippines, 7,308,000 bu.; Netherlands, 3,200,000 bu.; and Republic of South Africa, 3,038,000 bu. The leading markets for Class II wheat and flour in 1963-64 were: U.S.S.R., 184,348,000 bu.; Communist China, 41,286,000 bu.; Czechoslovakia, 28,662,000 bu.; Poland, 16,767,000 bu.; Cuba, 14,810,000 bu.; East Germany, 14,473,000 bu.; Romania, 9,671,000 bu.; and Bulgaria, 9,552,000 bu. During 1962-63, domestic sales of all classes of wheat were made at the same prices as those prevailing for wheat sold under the IWA. Class II prices for all grades of wheat coincided with the IWA and domestic quotations.

Other Grains.—The supply and disposition of the major Canadian grains for the crop years 1962-63 and 1963-64 is shown in Table 18.

The initial payment for oats in the 1963-64 crop year basis No. 2 C.W. in store Fort William-Port Arthur, at 60 cents per bu., remained the same as in 1962-63. The initial payment for barley basis No. 3 C.W. Six-Row, in store Fort William-Port Arthur, at 96 cents per bu., was also unchanged from the previous year. No interim payments were made on either grain during the crop year. Final payment to producers on the 1963-64 oat pool, announced on Mar. 30, 1965, amounted to some \$4,707,000 based on deliveries of 48,272,000 bu., the average being 9.751 cents per bu. after deducting the 1-p.c. PFAA levy. The final payment on the 1963-64 barley pool, announced Feb. 11, 1965, was based on deliveries of 88,849,000 bu. and amounted to some \$20,093,000, the average being 22.615 cents per bu. after deducting the 1-p.c. PFAA levy. Total prices, basis in store Fort William-Port Arthur, realized by producers for representative grades prior to the PFAA levy were as follows: No. 2 C.W. oats, \$0.69246 per bu.; No. 1 Feed oats, \$0.65096 per bu.; No. 3 C.W. Six-Row barley, \$1.17796 per bu.; and No. 1 Feed barley, \$1.09796 per bu.

Deliveries of rye and flaxseed in Western Canada amounted to 7,971,000 bu. and 17,375,000 bu., respectively.

Combined exports of oats, bagged seed oats, barley, rye and flaxseed (including exports of oatmeal and rolled oats, malt, pot and pearl barley and rye flour and meal in terms of grain equivalent) amounted to 84,834,000 bu. during the crop year 1963-64, some 49 p.c. more in 1962-63 but 27 p.c. below the ten-year (1952-53—1961-62) average. Exports of Canadian oats in bulk totalled 17,532,000 bu. compared with 20,585,000 bu. shipped in the previous year. Most of the decline was accounted for by smaller shipments to the following destinations, with totals for the previous year in brackets: Belgium and Luxembourg, 1,170,000 bu. (3,432,000 bu.); Federal Republic of Germany, 1,791,000 bu. (3,333,000 bu.); United States, 1,574,000 bu. (2,496,000 bu.); and Britain, 1,218,000 bu. (1,592,000 bu.). The major market for Canadian oats in 1963-64 was the Netherlands, shipments to that country totalling 8,410,000 bu. compared with 7,377,000 bu. in the previous year. Customs exports of bagged seed oats were 516,000 bu. compared with 489,000 in 1962-63 and exports of oatmeal and rolled oats amounted to the equivalent of 711,000 bu. compared with 625,000 in the previous year.

Barley exports, at 41,526,000 bu., represented a sharp increase over the 1962-63 level of 10,534,000 bu. Major shipments went to Communist China, 14,694,000 bu., compared with 1,083,000 bu. in the previous year; Britain, 9,546,000 bu., compared with 6,803,000 bu. and United States, 8,675,000 bu. compared with 2,233,000 bu. Japan and Czechoslovakia re-entered the Canadian market in 1963-64 with purchases of 3,654,000 bu. and 3,022,000 bu., respectively, and Korea, after an absence of more than ten years, purchased more than 1,366,000 bu. of Canadian barley. In addition to the exports of barley as grain, shipments of malt amounted to the equivalent of 5,409,000 bu. compared with a 1962-63 equivalent

of 4,843,000 bu.; of the 1963-64 exports, the equivalent of 2,633,000 bu. went to the States. Exports of rye declined to 5,501,000 bu. in 1963-64 from the 7,310,000 bu. in 1962-63. The Netherlands purchased 2,848,000 bu. and thus accounted for more than half the crop-year total. Smaller shipments went to seven other countries.

Clearances of Canadian flaxseed moving overseas during 1963-64 amounted to 13,638,000 bu. compared with 12,566,000 bu. in the previous year. Britain, the largest market, imported 4,545,000 bu., Japan 3,830,000 bu., and the Netherlands 1,476,000 bu. Smaller shipments went to about 12 other overseas destinations. Exports of linseed were equivalent to about 594,000 bu. of flaxseed, most of which went to Britain. In addition to exports of the five principal grains and their products in the 1963-64 crop year, rapeseed amounted to 5,182,000 bu. compared with 5,671,000 bu. in the preceding year. Mustard seed exports amounting to 1,070,000 bu. of which went to Japan. Mustard seed exports amounting to 1,070,000 bu. went mainly to the United States, Japan, Belgium and Luxembourg.

Lake Shipments of Grain.—The 1961 navigation season opened at the Canadian Lake-head on Apr. 2 and closed on Dec. 14. During the season, total vessel shipments of wheat, oats, barley, rye, flaxseed, buckwheat, peas and rapeseed amounted to 440,439,000 bu., 26 p.c. more than the 348,446,000 bu. shipped during the 1963 navigation season, which opened on Apr. 19 and closed on Dec. 19, the latest closing since the early 1920's.

Wheat Flour.—Production of wheat flour in the crop year 1963-64 amounted to 50,104,000 cwt., about 41 p.c. greater than in the previous crop year. Similarly, wheat milled for flour at 111,671,000 bu. was 42 p.c. higher than during 1962-63. Of the latter, about 101,634,000 bu. were Western Canadian spring wheat (other than Durum) and the remainder consisted of Ontario winter wheat, Durum and 'other'. Based on a daily operating potential of some 178,000 cwt., utilization of milling capacity averaged 94.3 p.c. in 1963-64 compared with 70.0 p.c. in the preceding year. Exports of wheat flour during the 1963-64 crop year amounted to 23,874,000 cwt., more than double the amount in 1962-63.

**22.—Wheat Milled for Flour, and Production and Exports of Wheat Flour, Five-Year

Subsection 2.—Livestock Marketings*

The 2,869,834 cattle marketed and graded through stockyards and packing plants in 1964 exceeded by 12 p.c. the number so marketed in 1963. Choice and Good grades combined accounted for 54 p.c. of total gradings compared with 52 p.c. in the previous year. This quality improvement resulted from a continued expansion of feed-lot finishing of cattle in Canada and a reduction in the number of feeder cattle exported alive to the United States. The average slaughtered weight of cattle was 542.1 lb., about the same as in 1963. Marketings of calves were also well above those of the previous year.

Hogs marketed at inspected and approved packing plants during 1964 numbered 7,281,644, an output exceeded only by sales in 1944 and 1959. Quality continued to improve, grade A accounting for 39 p.c. of the total gradings compared with 38 p.c. in 1963 and 36 p.c. in 1962. The number of sheep and lamb carcasses graded in 1964 was 436,490; the reduction of 3 p.c. from 1963 continued the declining trend of the sheep industry that has been in evidence over the past several years.

* More detailed information is available from DBS annual report *Livestock and Animal Products Statistics* (Catalogue No. 23-203), and the Canada Department of Agriculture publication *Livestock Market Review*. Statistics of livestock and poultry production and disappearance are given on pp. 485-490.

¹ Livestock billed through stockyards to country points outside province of origin. ² Movement to farms from stockyards and plants, and shipments on through-billings from country points in one province to country points in another province.

Section 3.—Warehousing and Cold Storage

The available statistics on warehousing, previously carried under the heading of Warehousing and Cold Storage, include statistics of the licensed storage of grain; cold storage facilities without which perishable foods such as meats, dairy products, fish and fruits could not be exchanged or distributed on a wide scale, and stocks of food commodities on hand in dairy factories and cold storage warehouses at certain times of the year; storage of petroleum and petroleum products; public and customs warehouses; and bonded warehouses, which specialize in the storage of tobacco and alcoholic liquors and are under the strict surveillance of Federal Government excise officers.

In this issue of the Year Book, only licensed grain storage data and statistics of the warehousing industry are carried. Reference may be made to the 1963-64 Year Book, pp. 867-871 for information on the other types of storage and later statistics may be obtained from the following sources: cold storage and storage of food—Economics Division of the Canada Department of Agriculture; storage of petroleum and petroleum products—Public Utilities Section of the Public Finance and Transportation Division, DBS; customs warehouses—Port Administration Branch of the Department of National Revenue; and bonded warehousing—Industry Statistics Section of the Industry Division, DBS.

Subsection 1.—Licensed Grain Storage

Total grain storage capacity in Canada, licensed under the provisions of the Canada Grain Act by the Board of Grain Commissioners for Canada, amounted to 664,321,000 bu. at Dec. 1, 1963, representing an increase of 16,615,000 bu. over the capacity at Dec. 1, 1962; higher storage capacity became available during the year at the following positions: 4,050,000 bu. in western country elevators; 4,680,000 bu. in Fort William-Port Arthur; and 8,010,000 bu. in lower St. Lawrence ports. The movement of grain in and out of storage during the crop year 1963-64 is outlined at pp. 870-875. Table 25 gives the amounts in storage at three dates during the year. At July 31, 1964, 61.8 p.c. of the licensed storage capacity was occupied as compared with 78.8 p.c. at the same date of 1963.

Subsection 2.—The Public Warehousing Industry

The summary statistics of the warehousing industry presented in Table 26 cover the operations of the majority of firms offering general merchandise and refrigerated storage facilities to the public. Associations and organizations such as co-operatives operating warehouses or storages for their own members are not included nor are packing houses and other firms operating storage facilities in connection with their respective businesses. Small food lockers are not included except where they may be part of a general warehousing business.

¹ Includes storage space for household goods amounting to 1,574,600 cu. ft. in 1960; 1,608,700 cu. ft. in 1961; 997,900 cu. ft. in 1962; 900,000 cu. ft. in 1963; and 1,047,090 cu. ft. in 1964.

Section 4.—Co-operative Organizations

Canadian co-operative activities continue to be dominated by marketing and purchasing associations; the revenue of such associations amounted to \$1,592,200,000 for the year ended July 31, 1963. Of that amount, sales of products and supplies accounted for \$1,572,000,000, the remainder being receipts for services provided by the co-operatives such as grinding, chopping, trucking and revenue for rent, interest, dividends and commissions.

Membership in marketing and purchasing associations was slightly higher in 1963 than in 1962 but the number of associations decreased from 1,877 to 1,632, a few through amalgamations but most of them through reclassification to the production type of co-operative which is included with service associations. Total sales of farm products amounted to \$1,109,800,000 in 1963, an increase of 20 p.c. over the previous year, and sales of supplies increased 9 p.c., resulting in an increase in total business of 16 p.c. All provinces reported higher sales of products but the largest increases were in Saskatchewan and Manitoba; in Alberta, sales amounting to about \$6,000,000, which had been classed as marketing in 1962, were changed over to the service group in 1963. Saskatchewan accounts for the greatest value of farm products marketed co-operatively; sales in that province totalled \$355,600,000 in 1963, of which amount grain and seed sales made up 68 p.c. Of the total sales for Canada, grain and seed sales accounted for 47 p.c., dairy product sales for 22 p.c., livestock sales for 11 p.c., and sales of eggs and poultry and fruit and vegetables for most of the remainder. Members' equity in marketing and purchasing co-operatives increased by \$12,600,000 in 1963 and liabilities to the public by \$87,600,000.

Wholesale co-operatives are federations of local co-operatives which act as central marketing agencies for farm products and as wholesalers of farm supplies, machinery and

consumer goods. Such associations reported assets of \$119,300,000 in 1963, of which members' equity represented 34 p.c., and sales of supplies and farm products of \$358,300,000, an increase of 6 p.c. over 1962.

Service co-operatives, which numbered 1,006 in 1963, provide a wide range of functions such as rural electrification, medical insurance, transportation, grazing, custom grinding, seed cleaning, operation of farm machinery and restaurant operation. Membership in these associations rose from 297,616 in 1962 to 303,624 in 1963 and assets from \$106,700,000 to \$117,800,000, mainly as a result of the reclassifications mentioned above. Fishermen's co-operatives operate in all provinces and in 1963 reported a membership of 9,846, sales of fish amounting to \$20,200,000 and sales of supplies amounting to \$2,000,000; comparable figures for 1962 were 9,239, \$18,400,000 and \$1,500,000, respectively.

Eskimo co-operatives operating in the Canadian North have increased rapidly in number and in diversity of service (see p. 215). Fifteen societies reported a membership of 401 in 1963, sales of \$410,834, share capital of \$114,930, and reserves of \$70,210. Four new societies have since been formed.

Section 5.—Interprovincial Freight Movements*

Statistics relating to interprovincial freight movements are difficult to collect since there are no controls over, or barriers to, such trade. Interprovincial freight traffic statistics are available for loadings and unloadings of goods carried by rail, water, motor transport and pipeline.

Details of railway freight movement are confined to tons loaded and unloaded by province and contain a certain amount of import and export of goods shipped by water. The figures given in Table 29, however, do not give a precise measure of total interprovincial freight movement by rail; they indicate only the net interprovincial movement of railway freight, which is but one aspect of that trade. For water-borne traffic, Table 30 shows tonnages of all cargoes unloaded at Canadian ports in both interprovincial and intraprovincial trade, by province of origin. Interprovincial and international traffic carried by Canadian registered trucks is shown in Table 31. Pipeline statistics are given in the Transportation Chapter, pp. 823-825.

* Revised in the Transportation Section, Public Finance and Transportation Division, Dominion Bureau of Statistics.

PART II.—GOVERNMENT AIDS TO AND CONTROL OF DOMESTIC TRADE

Section 1.—Controls Affecting the Marketing of Farm Products

Subsection 1.—Control of the Grain Trade

The agencies exercising control of the grain trade in Canada include the Board of Grain Commissioners for Canada which, since 1912, has administered the provisions of the Canada Grain Act, and the Canadian Wheat Board which operates under the Canadian Wheat Board Act, 1935.

The Board of Grain Commissioners for Canada.*—The Board of Grain Commissioners was established in 1912 under the authority of the Canada Grain Act, 1912 (RSC 1952, cc. 25 and 308 and amendments). It is a quasi-judicial and administrative body of three—a chief commissioner and two commissioners—reporting to the Minister of Agriculture.

The Canada Grain Act has been called the Magna Charta of the Canadian grain trade or, more particularly, of the Canadian farmer, and the Board's chief duties are to ensure that the rights conferred on the different parties by the provisions of the Act are properly protected. Transportation of grain is restricted except from or to licensed elevators, and restriction is placed on the use of established grade names. The Act does not provide for any control or supervision of grain exchanges and the Board of Grain Commissioners has no power or duties in the matter of grain prices.

The Board manages and operates, under semi-public terminal licences, the Canadian Government elevators situated at Moose Jaw and Saskatoon, Sask., Lethbridge, Edmonton and Calgary, Alta., and Prince Rupert, B.C. The Executive Offices of the Board and other principal offices are situated at Winnipeg, Man., but branch offices are maintained at numerous points from Montreal in the east to Victoria in the west. Total personnel is approximately 1,100, including elevator staff.

On a fee basis, the Board provides official inspection, grading and weighing of grain, and registration of warehouse receipts. All operators of elevators in Western Canada and of elevators in Eastern Canada that handle western-grown grain for export, as well as all parties operating as grain commission merchants, track buyers of grain, or as grain dealers, are required to be licensed by the Board annually and to file security by bond or otherwise as a guarantee for the performance of all obligations imposed upon them by the Canada Grain Act or by the regulations of the Board.

To protect the rights of the different parties, the Board has jurisdiction to inquire into and is empowered to give direction regarding any matter relating to the grading or weighing of grain; deductions made from grain for dockage; shortages on delivery of grain into or out of elevators; unfair or discriminatory operation of any elevator; refusal or neglect of any person to comply with any provision of the Canada Grain Act; and any other matter arising out of the performance of the duties of the Board.

In the Prairie Provinces the Board maintains four assistant commissioners—one in Alberta, two in Saskatchewan and one in Manitoba. These assistant commissioners investigate complaints of producers and inspect periodically the country elevators in their respective provinces; all elevators with their equipment and stocks of grain are subject at any time to inspection by officials of the Board.

The Board sets up, annually, Committees on Grain Standards and also appoints Grain Appeal Tribunals to give final decisions in cases where appeals are made against the grading of grain by the Board's inspection officials. To assist in maintaining the uniform quality of the top grades of Red Spring wheat handled through terminal elevators, the Canada Grain Act provides that wheat of these grades shall be stored with grain of like grade only.

* Prepared by W. J. MacLeod, Secretary of the Board of Grain Commissioners for Canada, Winnipeg, Man.

The Grain Research Laboratory, located at Winnipeg, is the main centre of research on the chemistry of Canadian grains. It is well staffed and equipped to provide the service required to help maintain and expand domestic and foreign markets for all types of grain. The Laboratory collects and tests samples of various crops to obtain information on the current quality of all grains shipped during the crop year. Fundamental research is also undertaken; the program is directed toward better understanding of what constitutes quality in cereal grains and toward improvement in the methods of assessing quality.

In addition to its duties under the Canada Grain Act, certain other duties are performed by the Board. Under the provisions of the Inland Water Freight Rates Act (RSC 1952, c. 153), the Board maintains records of rates for the carriage of grain from Fort William or Port Arthur, Ont., by lake or river navigation and is empowered to prescribe maximum rates for such carriage. Under the provisions of the Prairie Farm Assistance Act (RSC 1952, c. 213 as amended), the Board collects from licensees under the Canada Grain Act 1 p.c. of the purchase price of wheat, oats, barley, rye, flax and rapeseed purchased by such licensees.

The Canadian Wheat Board.*—The Canadian Wheat Board was established under the Canadian Wheat Board Act of 1935 for the purpose of “the marketing in an orderly manner, in interprovincial and export trade, of grain grown in Canada” and now operates under RSC 1952, c. 44 as amended. The Board accomplishes its objective through regulation and agreement. It owns no grain handling facilities but, by entering into agreements with the owners of these facilities, it attempts to bring about an orderly flow of grain through each of the steps involved in merchandising the grain from the producer to the domestic or overseas buyer.

In the selling of wheat, the Board utilizes the services of shippers and exporters. In its sales operations, the Board endeavours to meet the wishes of overseas buyers and, on occasion, enters into direct contracts. When an exporter completes an export sale, in his capacity as an agent of the Board, he is responsible for the transaction; he completes the transaction with the buyer and settles with the Board for the purchase of the wheat from the Board.

When the commercial storage facilities are inadequate to handle all the grain produced, it is necessary for the Board to regulate the flow of grain from the producer to these forward positions. The first step is accomplished by the use of producer's delivery permits issued annually by The Canadian Wheat Board. Every delivery of grain made to country elevators by a producer is entered in his permit book. By regulating the amount of grain delivered by the producer to the country elevator by the use of a quota system and, by apportioning shipping orders to country elevators according to the needs created by sales commitments, the Wheat Board regulates the amount of grain coming into the marketing channel.

The next step is the handling of the grain by the country elevator. The maximum charges for the handling and storing of the grain are set by the Board of Grain Commissioners, but the actual charges are subject to negotiation between the elevator companies and the Wheat Board.

The third step in the marketing process—transporting the grain from the country elevators to large terminal elevators in Eastern Canada, Churchill or on the West Coast—is carried out by the railways. The Wheat Board determines the kinds and grades of grain that are required at the different terminal destinations to meet its sales commitments and informs the elevator companies and the railways of these needs. The maximum tariffs are set by an agreement between the railways and the Government of Canada.

The fourth major step—storing and handling of the grain at terminal elevators—is done in privately or co-operatively owned elevators. Maximum charges are established for this service by the Board of Grain Commissioners.

* Revised by R. L. Kristjanson, Executive Assistant, The Canadian Wheat Board, Winnipeg, Man.

Subsection 2.—Controls Over Farm Products Other Than Grain*

The Government of Canada and provincial governments have, through legislation and in other ways, given marketing aids such as those related to research, education, information, inspection, grading and many other service measures of this type, designed to assist in making adjustments in marketing within agriculture and between agriculture and the remainder of the economy. Closely related is regulatory action designed to protect the consumer.

Producers have been concerned about another type of market control, namely that which will give either their organizations or a government agency influence over the price received. In a highly specialized commercial agriculture such as Canada now has, the producer is dependent on the price of his product for his livelihood. Canadian farmers have long attempted to obtain some measure of market control through voluntary organizations, mainly marketing co-operatives. All provinces have made provision for the incorporation of such co-operatives and most, if not all, have provided other assistance to them. In the federal field, the Agricultural Products Co-operative Marketing Act encourages marketing under a co-operative plan.

Other legislation provides for legal control over the marketing of agricultural products, either by a producers' board or a government agency. Legislation of this type includes that pertaining to milk control boards and to marketing boards, both discussed below. Measures pertaining to grain marketing have been reviewed in Subsection 1, pp. 885-886, and the Agricultural Stabilization Act, which provides price support for certain key products is discussed in the Agriculture Chapter, pp. 461-462.

Product Controls.—The federal and provincial departments of agriculture co-operate in establishing and enforcing grades of quality standards for various foods. Some control over size and type of containers used for distribution of agricultural products is exercised by the Canada Department of Agriculture and the Department of Trade and Commerce enforces regulations pertaining to weights and measures (see p. 894).

Controls related to health and sanitation in food handling are developed and enforced at all three levels of government—municipal, provincial and federal. Examples of provincial and municipal action include laws pertaining to the pasteurization of milk, inspection of slaughterhouses and sanitary standards in restaurants. At the federal level, inspection by the Health of Animals Branch of the Department of Agriculture of all meat carcasses that enter into interprovincial trade is required. The Food and Drug Directorate of the Department of National Health and Welfare has wide control over the composition of foods sold and over misleading advertising of foods and drugs.

Marketing Controls.—*The Agricultural Products Co-operative Marketing Act.*—In the late 1930's, the Federal Government decided to assist orderly marketing by encouraging the establishment of pools which would give to the producer the maximum sales return for his product, less a maximum margin for handling expenses agreed upon in advance. Thus, the Agricultural Products Co-operative Marketing Act and the Wheat Co-operative Marketing Act were passed in 1939. The latter was used in one year only but the Agricultural Products Co-operative Marketing Act, which covers the marketing of all agricultural products except wheat, has continuously served agricultural producers since 1939.

The purpose of this Act is to aid farmers in pooling the returns from sale of their products by guaranteeing initial payments and thus assisting in the orderly marketing of the product. The Government may undertake to guarantee a certain minimum initial payment to the producer at the time of delivery of the product, including a margin for handling; sales returns are made to the producer on a co-operative plan. The guaranteed initial payment may be up to a maximum of 80 p.c. of the average price paid to producers for the previous three years, the exact percentage to be recommended by the Minister of Agriculture who enters into an agreement with the selling agency for the product.

* Prepared in the Economics Branch of the Canada Department of Agriculture, Ottawa.

Agreements have been made under this Act pertaining to a wide variety of agricultural products. In 1963 the only agreement made was with respect to apples for processing.

Milk Control Legislation.—Most of the provinces enacted milk control legislation before 1940. Many of them finance these milk-control agencies out of public funds, others finance through the collection of licence fees and assessments from those engaged in the fluid milk industry, and some combine the two methods. Most milk-control agencies have authority to carry out some system of licensing which provides for the revocation of such licences if those engaged in the fluid milk business do not conform with the orders of the milk control board.

In all provinces with such boards, the milk control board sets the minimum price which distributors in specified markets may pay producers for Class I milk, that is, milk actually sold for fluid consumption. In Ontario and British Columbia, this minimum price is based on formulas. Most provinces also set either minimum or fixed wholesale and retail prices for fluid milk. The wholesale and retail prices are fixed in Prince Edward Island, Nova Scotia and Saskatchewan; minimum prices are established in New Brunswick, Quebec and Alberta. However, maximum but not minimum prices are set in Manitoba and no control is exercised over milk prices at the wholesale and retail levels in Ontario and British Columbia; in these three provinces some degree of price competition between store and home delivery sales has developed.

The powers given to or requirements made by milk control boards include: (1) authority to inquire into all matters pertaining to the fluid milk industry, to define market areas, to arbitrate disputes, to examine the books and records of those engaged in the industry, to issue and revoke licences, and to establish a price for milk, and (2) authority to require a bond from distributors, periodic reports from distributors, payments to be made to producers by a certain date each month, distributors to give statements to suppliers, distributors to give notice before ceasing to accept milk from any producer, producers to give notice before ceasing to deliver milk to any distributor, and the prohibition of distributors requiring capital investment from producers.

Thus, fluid milk controls are not only widespread but also numerous. They are generally considered to be administered in the public interest as well as in the interest of those who have regular opportunities to appear before the boards in connection with requests for price changes.

Producer Marketing Boards.—During the 1930's strong support developed for legislation whereby agricultural producers could exercise legal authority under certain conditions to control the marketing of their produce. The Natural Products Marketing Act of 1934 attempted to provide this power at the federal level but proved *ultra vires*. The Natural Products Marketing (British Columbia) Act 1936 was *intra vires* of provincial government powers and provided the model from which marketing board legislation has evolved in all ten provinces.

While marketing board legislation has been revised from time to time on the basis of experience and there are variations in detail from province to province, the same basic powers are given to producers in all provinces. These powers include authority for a duly constituted producer board to control the marketing of 100 p.c. of a specified commodity produced in a designated area. A producers' board, in at least some provinces, may set production quotas for each farmer. One producers' board may control the marketing of several related commodities and the designated area may be either the whole or part of a province. A producer vote is usually required to establish a producer marketing board whose powers are delegated either by a provincial marketing board, which has certain supervisory authority, or by the Lieutenant-Governor in Council.

The powers of a producers' board provided by provincial legislation are necessarily limited to intraprovincial trade. Under the Agricultural Products Marketing Act, the Federal Government may delegate to a marketing board with respect to interprovincial and export trade similar powers to those obtained with respect to intraprovincial trade

under provincial authority. This Act also gives the Governor in Council the right to authorize a provincial marketing board to impose and collect levies from persons engaged in the production and marketing of commodities controlled by it for the purposes of the board, the creation of reserves and equalization of returns.

In mid-1965 there were 80 such marketing boards organized in Canada, 49 of which were in the Province of Quebec and 16 in Ontario; each of the other provinces with the exception of Newfoundland had one or more boards. It is estimated that about one seventh of the 1963 farm cash income was received from sales made under the control of provincial marketing board plans, including the following commodities: hogs, certain dairy products, poultry, wool, tobacco, wheat, soybeans, sugar beets, potatoes, other vegetables, fruits, seed corn, white beans, honey, maple products and pulpwood. As at Oct. 31, 1964, 46 of these provincial boards had received an extension of powers for purposes of inter-provincial and export trade from the Federal Government. Seven boards had received authority with regard to seven commodities to collect levies in excess of administrative expenses.

Section 2.—Combinations in Restraint of Trade*

The purpose of Canadian anti-combines legislation is to assist in maintaining free and open competition as a prime stimulus to the achievement of maximum production, distribution and employment in a system of free enterprise. To this end, the legislation seeks to eliminate certain practices in restraint of trade that serve to prevent the nation's economic resources from being most effectively used for the advantage of all citizens.

By amendments that came into force on Aug. 10, 1960 (SC 1960, c. 45), all the provisions of the anti-combines legislation which previously had been divided between the Combines Investigation Act (RSC 1952, c. 314) and the Criminal Code were amended and consolidated in the Act. The substantive provisions now are contained in Sects. 2, 32, 33, 33A, 33B, 33C and 34 of the Combines Investigation Act. The Act was enacted in 1923 and was amended extensively in 1935, 1937, 1946, 1949, 1951 and 1952 as well as in 1960.

Sect. 32, generally speaking, forbids in Subsect. (1) combinations that prevent or lessen "unduly" competition in the production, manufacture, purchase, barter, sale, storage, rental, transportation or supply of an article of trade or commerce or in the price of insurance. Subsect. (1) derives from Sect. 411 of the Criminal Code which was enacted originally in 1889. Although Subsect. (2) provides that no person shall be convicted for participation in an arrangement relating only to such matters as the exchange of statistics or the defining of product standards, etc., Subsect. (3) provides that Subsect. (2) does not apply if the arrangement has lessened or is likely to lessen competition unduly in respect of prices, quantity or quality of production, markets or customers or channels of distribution, or if the arrangement "has restricted or is likely to restrict any person from entering into or expanding a business in a trade or industry". Subsect. (4) provides that, subject to Subsect. (5), no person shall be convicted for participation in an arrangement which relates only to the export trade. Subsect. (5) provides that Subsect. (4) does not apply if the arrangement has had or is likely to have harmful effects on the volume of export trade or on the businesses of Canadian competitors or on domestic consumers.

Sects. 2 and 33 make it an offence to participate in a merger that has or is likely to have the effect of lessening competition to the detriment or against the interest of the public. These Sections also make it an offence to participate in a monopoly that has been operated or is likely to be operated to the detriment or against the interest of the public.

Sect. 33A deals with what are commonly called "price discrimination" and "predatory price cutting". It provides that a supplier may not make a practice of discriminating among those of his trade customers who come into competition with one another by giving one a preferred price which is not available to another if the second is willing to buy in

* Revised by D. H. W. Henry, Director of Investigation and Research, Combines Investigation Act, Department of Justice, Ottawa.

like quantities and qualities as the first; it also forbids a supplier from selling at prices lower in one locality than in another, or unreasonably low anywhere, if the effect or tendency of such policy is to lessen competition substantially or eliminate competitors or the policy is designed to have such effect.

Sect. 33B provides that where a supplier grants advertising or display allowances to competing trade customers he must grant them in proportion to the purchases of such customers; any service he exacts in return must be such that his different types of customers are able to perform; and if such customers are required to incur expenses to earn such allowances, such expenses also must be proportionate to their purchases.

Sect. 33C makes it an offence for any person, for the purpose of promoting the sale or use of an article, to make any materially misleading representation to the public concerning the price at which such or like articles have been, will be or are ordinarily sold.

Sect. 34 prohibits a supplier of goods from prescribing the prices at which they are to be resold by wholesalers or retailers or from cutting off supplies to a merchant because of the merchant's failure or refusal to abide by such prices, i.e., the practice of "resale price maintenance". The Section also provides that it shall not be inferred that a person practised resale price maintenance simply because he refused or counselled the refusal of supplies to a merchant if there were reasonable cause to believe and the supplier did believe that the merchant was making a practice of using articles of such supplier as "loss-leaders" or as bait advertising or was making a practice of engaging in misleading advertising in respect of such articles or of not providing services that purchasers of such articles might reasonably expect.

The Act provides for a director who is responsible for investigating combines and other restrictive practices, and a commission (the Restrictive Trade Practices Commission) which is responsible for appraising the evidence submitted to it by the Director and the parties under investigation, and for making a report to the Minister. When there are reasonable grounds for believing that a forbidden practice is engaged in, the Director may obtain from the Commission authorization to examine witnesses, search premises, or require written returns. After examining all the information available, if the Director believes that it proves the existence of a forbidden practice, he submits a statement of the evidence to the Commission and to the parties believed to be responsible for the practice. The Commission then sets a time and place at which it hears argument on behalf of the Director in support of his statement, and hears argument and receives evidence on behalf of any persons against whom allegations have been made in the statement. Following this hearing, the Commission prepares and submits a report to the Minister, ordinarily required to be published within thirty days.

The Act also provides for general inquiries into restraints of trade which, while not forbidden or punishable, may affect the public interest. It further provides in Sect. 31 that the courts, including the Exchequer Court of Canada, in addition to imposing punishment for a contravention of the legislation, may make an order restraining persons from embarking on, continuing or repeating a contravention or directing the dissolution of a merger or monopoly as the case may be. Application also may be made to the courts for such an order in lieu of prosecuting and convicting for a contravention of the legislation. By virtue of the 1960 amendments, prosecutions for offences against the substantive provisions of the legislation (other than Sect. 33C which is punishable only on summary conviction) may be taken either in the provincial courts or with the consent of the accused in the Exchequer Court of Canada.

In the years 1962-64, the following reports of inquiries under the legislation were published:—

- (1) Distribution and Sale of Automotive Oils, Greases, Anti-Freeze, Additives, Tires, Batteries, Accessories and Related Products.
- (2) Manufacture, Distribution and Sale of Paperboard Shipping Containers and Related Products.
- (3) The Acquisition of the Common Shares of Hendershot Paper Products Limited by Canadian International Paper Company.

- (4) The Acquisition by Bathurst Power & Paper Company Limited of Wilson Boxes, Limited.
- (5) Manufacture, Distribution and Sale of Evaporated Milk and Related Products.
- (6) Distribution and Sale of Electric Appliances, Electric Shavers and Accessory Products (Sunbeam Corporation (Canada) Limited).
- (7) Manufacture, Distribution and Sale of Drugs.
- (8) Alleged Combine in the Matter of a Call for Tenders by the Town of Duvernay for the Construction of Sewers and Water Mains.
- (9) Sale of Plumbing and Heating Supplies and Related Products in the City of Montreal and Elsewhere in the Province of Quebec.
- (10) Production, Distribution and Supply of Newspapers in the Sudbury-Copper Cliff Area.
- (11) Distribution, Supply and Sale of Plumbing Supplies and Related Products (Alberta).
- (12) Road Surfacing in Ontario.
- (13) Ottawa Milk Pricing, November 1961.
- (14) Pricing Practices in the Pencil Industry.

These reports and copies of the annual reports under the Act may be obtained from the Queen's Printer or the office of the Director of Investigation and Research, Combines Investigation Act, Department of Justice, Ottawa.

Section 3.—Control and Sale of Alcoholic Beverages

The retail sale of alcoholic beverages in Canada is controlled by provincial and territorial government liquor control authorities. Alcoholic beverages are sold directly by most of these liquor control authorities to the consumer or to licensees for resale. However, in some provinces beer and wine are sold directly by breweries and wineries to consumers or to licensees for resale. During the year ended Mar. 31, 1964, provincial government liquor control authorities operated 1,070 retail stores.

Table 1 shows revenue from administration of liquor control by provincial and territorial governments. Details are given in DBS report, *The Control and Sale of Alcoholic Beverages in Canada* (Catalogue No. 63-202).

1.—Provincial Revenue from Administration of Liquor Control, Years Ended Mar. 31, 1963 and 1964

NOTE.—Figures include revenue collected directly by the provincial and territorial governments as well as revenue of the liquor authorities, but exclude revenue resulting from a general retail sales tax on alcoholic beverages levied by eight provinces.

Section 4.—Miscellaneous Aids or Controls

The National Energy Board.—The National Energy Board was established by the National Energy Board Act, 1959 (SC 1959, c. 46) for the broad purpose of assuring the best use of energy resources in Canada. The Board is responsible for the regulation in the public interest of the construction and operation of oil and gas pipelines subject to the jurisdiction of the Parliament of Canada, the tolls charged for transmission by such pipelines, the export and import of gas, the export of electric power and the construction of those lines over which such power is exported. The Board is also required to study and keep under review all matters relating to energy within the jurisdiction of the Parliament of Canada and to recommend such measures as it considers necessary or advisable in the public interest with regard to such matters. The Act also authorizes the extension of the export and import provisions to oil upon proclamation by the Governor in Council. The Board, which reports to the Minister of Trade and Commerce, consists of a chairman, a vice-chairman and three other members.

During 1964, the work of the Board in fulfilment of its regulatory responsibilities under the National Energy Act included the issuing of 574 certificates, licences and orders, compared with 570 in 1963. The certificates authorized the construction of certain additional oil and gas pipeline facilities and international power lines; the licences and orders concerned the export of gas and electric power, the import of gas, the export of butanes by pipeline and exemption orders, the latter relating to the construction of pipelines or branches or extensions not exceeding 25 miles in length. Public hearings were held during 1964 in regard to an application for a new international power line and applications for additional oil pipeline and gas pipeline facilities. The Board also issued numerous orders relating to pipeline safety and carried out field inspections relating to the pressure-testing of gas and oil pipelines, gas compressor and oil pumping facilities and other pipeline installations.

During 1964, the Board continued the preparation of detailed supply and demand forecasts and the development, in co-operation with the Dominion Bureau of Statistics, of statistical records relating to energy. Progress was made in improving supply and demand data for petroleum, natural gas, coal and electricity in co-operation with the Inter-departmental Advisory Committee on Energy Statistics, the establishment of which was sponsored by the Board and the DBS.

Up-to-date estimates of reserves and producibility for crude oil, natural gas and natural gas liquids were maintained, in co-operation with interested provincial agencies and trade associations, and a detailed study of gas reserves in British Columbia was completed. During the year the Board was involved with a number of other agencies concerned with energy supply and demand, such as the Federal-Provincial Working Committee on Long-Distance Transmission, the Atlantic Development Board, the Canadian Standards Association Committee, the Emergency Supply Planning Branch of the Department of Defence Production and a number of energy industry advisory committees, and continued liaison with international organizations such as the Organization for Economic Co-operation and Development.

Trade Standards.—The Standards Branch of the Department of Trade and Commerce consolidates under one Director the administration of the Electricity Inspection Act, the Gas Inspection Act, the Precious Metals Marking Act, the Weights and Measures Act, and the National Trade Mark and True Labelling Act.

Commodity Standards.—On Nov. 26, 1949, Parliament passed the National Trade Mark and True Labelling Act (RSC 1952, c. 191) which provides a framework for the development of the National Standard and true labelling in order to circumvent public deception in advertising. In brief, the use of the National Standard is voluntary and compliance with commodity standards affects only those manufacturers who desire to use the national trade mark. This is exemplified in the National Trade Mark Garment Sizing Regulations which were passed on Mar. 16, 1961. In addition, where manufacturers

descriptively label any commodity or container, it must be labelled accurately to avoid public deception. The regulation applying to the labelling of fur garments, for example, has been established as a code of fair practice throughout the merchandising field.

Under the terms of the Precious Metals Marking Act, 1946 (RSC 1952, c. 215), commodities composed of gold, silver, platinum or palladium may be marked with a quality mark describing accurately the quality of the metal. Where such mark is used, a trade mark registered in Canada or for which application for registration has been made must also be applied. Gold-plated or silver-plated articles may also be marked under certain conditions outlined in the Act. The inspection staff of the Standards Branch is engaged in the examination of advertising matter, in verifying the quality of articles offered for sale, and in checking the marks applied.

Weights and Measures.—The Weights and Measures Act (RSC 1952, c. 292) prescribes the legal standards of weight and measure for use in Canada; it also requires control of the type of all weighing and measuring devices used for commercial purposes and their periodic verification and surveillance directed toward the elimination of sales by short weight or short measure. During 1964, 772,563 prepackaged articles were checked for weight or measure and 504,999 inspections of devices were made.

Electricity and Gas Inspection.—Responsibilities of the Standards Branch, under the Electricity Inspection Act (RSC 1952, c. 94) and the Gas Inspection Act (RSC 1952, c. 129) comprise the testing and stamping of every electricity and gas meter used throughout Canada for billing purposes, the object being to ensure the correct measurement of all electricity and gas sold. Canada is divided into 20 districts for administration of the two Acts and the staff numbers 211. During the year ended Mar. 31, 1964, 1,345,867 meters were tested. In 1963, there were 5,808,101 electricity meters and 1,518,301 gas meters registered in Canada.

*Patents.**—Letters patent are issued subject to the provisions of the Patent Act (RSC 1952, c. 203), effective since 1935. Applications for protection relating to patents should be addressed to the Commissioner of Patents, Ottawa.

4.—Patents Applied for, Granted, etc., Years Ended Mar. 31, 1960-64

The number of Canadian patents granted increased fairly steadily each year from 4,522 at the beginning of the century to 23,230 in the year ended Mar. 31, 1964. Roughly, 68 p.c. of the patents granted resulted from inventions made by residents of the United States, 6 p.c. by residents of Britain and other Commonwealth countries and 6 p.c. by residents of Canada. Printed copies of patents issued from Jan. 1, 1948 to date are available at a nominal fee. The Canadian *Patent Office Record* gives a brief digest of each patent.

Canadian and foreign patents may be consulted at the Patent Office Library. The Library has records of British patents and abridged specifications thereof from 1617 to date, and of United States patents from 1845 to date, as well as many patents, indexes, journals and reports from Australia, New Zealand, South Africa, India, Pakistan, France, Belgium, Austria, Norway, Mexico, Italy, Sweden, the Netherlands, Switzerland, Japan, Egypt, Germany, Ireland, Colombia, Czechoslovakia and Yugoslavia.

* Revised by the Commissioner of Patents, Department of the Secretary of State, Ottawa.

Copyrights, Industrial Designs and Timber Marks.*—Copyright protection is governed by the Copyright Act (RSC 1952, c. 55) in force since 1924. Protection is automatic without any formality. However, a system of voluntary registration is provided. Application for registration should be addressed to the Commissioner of Patents, Ottawa.

The Act sets out the qualifications for a copyright and its duration: "Copyrights shall subsist in Canada . . . in every original literary, dramatic, musical and artistic work, if the author was, at the date of the making of the work, a British subject, a citizen or subject of a foreign country which has adhered to the Berne Convention and the additional Protocol . . . or resident within Her Majesty's Dominions. The term for which the copyright shall subsist shall, except as otherwise expressly provided by this Act, be the life of the author and a period of fifty years after his death."

Canada belongs to the Universal Copyright Convention. This means that the works of Canadian authors are protected in the United States without the formality of compulsory registration or the obligation of printing in the United States, provided that, from the first publication, the work bears in a prominent place the following identification: ©, followed by the name of the proprietor and the year of publication.

Copyright protection is extended to records, perforated rolls, cinematographic films, and other contrivances by means of which a work may be mechanically performed. The intention of the Act is to enable Canadian authors to obtain full copyright protection in Canada, in all parts of the Commonwealth, in foreign countries of the Copyright Union and in the United States. Protection of industrial designs and of timber marks is afforded under the Industrial Design and Union Label Act and the Timber Marking Act. Registers of such designs and marks are kept by the Copyright Branch of the Patent Office.

Trade Marks.†—The Trade Marks Office, a Branch of the Department of the Secretary of State, administers the Trade Marks Act (SC 1952-53, c. 49) which covers all legislation concerning the registration and use of trade marks and supersedes from July 1, 1954, former legislation enacted under the Unfair Competition Act, the Union Label Act and the Shop Cards Registration Act. Correspondence relating to an application for registration of a trade mark should be addressed to the Registrar of Trade Marks, Ottawa.

Applications are advertised for opposition purposes in the *Trade Marks Journal*, a weekly publication that also gives particulars of every registration of a trade mark and every registration of a registered user. The required fee payable on application for registration of a trade mark is \$25, for advertisement of an application \$15 and for registration of a person as a registered user of a trade mark, \$20.

* Revised by the Commissioner of Patents, Department of the Secretary of State, Ottawa.

† Revised by the Registrar of Trade Marks, Department of the Secretary of State, Ottawa.

Subventions and Bounties on Coal.*—A major problem of the Canadian coal mining industry arises from the fact that its fields are situated far distant from the main consuming markets of the Provinces of Ontario and Quebec while these markets lie in close proximity to the bituminous and anthracite fields of the United States. Transportation subventions, which have been maintained in varying degree during the past 30 years, were designed to further the movement of Canadian coals by equalizing as far as possible their laid-down costs with the laid-down costs of imported coals in various market areas. Since 1963, an addition to subvention regulations has also enabled eastern Canadian coals to be made competitive with imported residual fuel oils in the Atlantic Provinces and the Province of Quebec. Subvention assistance is authorized by annual Parliamentary vote and payments are administered in accordance with regulations established by Orders in Council.

7.—Expenditure for Coal Subventions, by Province, 1960-64

NOTE.—Tonnages and expenditures shown in a given year, being on a calendar-year basis, are not necessarily in direct relationship; certain of the amounts include adjustments on movements of previous years.

¹ Includes \$500,000 paid by the Nova Scotia Government as its share of the joint cost of certain Nova Scotia subvention payments.

The Canadian Coal Equality Act (RSC 1952, c. 34), which implemented one of the recommendations of the Royal Commission on Maritime Claims (1926), was designed to assist the Canadian steel industry and only incidentally affects coal. It provides for the payment of 49.5 cents per ton on bituminous coal mined in Canada and converted into coke to be used in the Canadian manufacture of iron and steel. Bounties paid under this authority for the years 1960-64 were as follows:—

PART III.—BANKRUPTCIES AND COMMERCIAL FAILURES

Two series of figures are included in this part which, although closely related as far as subject matter is concerned, cover different aspects of the field of bankruptcies and commercial failures. The first, under the heading of "Administration of Bankrupt Estates" is limited to the supervision, by the Superintendent of Bankruptcy, of the administration of bankrupt estates under the Bankruptcy Act (including the Farmers' Creditors Arrangement Act); it gives information on the amounts realized from the assets as established by debtors and indicates that values actually paid to creditors are invariably very much lower than such estimates alone would imply. It can therefore be assumed that this applies in even greater degree to the more extended fields covered in the second section under the heading of "Returns under the Bankruptcy and Winding-Up Act" which is compiled by

* Revised by the Administrative Officer, Dominion Coal Board, Ottawa.

the Dominion Bureau of Statistics. This series is limited to bankruptcies and insolvencies made under federal legislation (the Bankruptcy Act and the Winding-Up Act) and, since 1955, includes business failures only (see p. 898). The figures of assets and liabilities are estimates made by the debtor and, because they are not made uniformly, should be accepted with reservations.

Administration of Bankrupt Estates.*—Federal insolvency legislation comprises the Bankruptcy Act 1949 (RSC 1952, c. 14), the Farmers' Creditors Arrangement Act 1943 (RSC 1952, c. 111), the Companies' Creditors Arrangement Act (RSC 1952, c. 54), and, to some extent, the Winding-Up Act (RSC 1952, c. 296). The two Arrangement Acts are designed to avert failure and neither series of statistics therefore includes proposals or arrangements under these Acts. When such proposals or arrangements are rejected by the creditors or fail in their purpose, the proceedings may then come under the Bankruptcy Act, the bankruptcy provisions of the Farmers' Creditors Arrangement Act or, in certain circumstances, the Winding-Up Act. There are no provisions in the Companies' Creditors Arrangement Act for the liquidation or winding-up of insolvent companies.

* Prepared by the Superintendent of Bankruptcy, Ottawa.

¹ Includes summary administration provisions of the Bankruptcy Act.

² In addition to the amount paid to creditors by the trustee, secured creditors realized direct from their security approximately \$23,370,188.

Returns under the Bankruptcy and Winding-Up Acts.*—The DBS statistics concerning bankruptcies and insolvencies cover only the failures coming under federal legislation, i.e., the Bankruptcy Act and the Winding-Up Act. The series, since 1955, covers business failures only, excluding failures of individuals such as wage-earners, salesmen and executive personnel.

* Prepared by the Business Finance Division, Dominion Bureau of Statistics.

PART IV.—PRICES*

Section 1.—Index Numbers of Wholesale Prices

The term "wholesale prices" refers to transactions that occur below the retail level. It has more of a connotation of bulk purchase and sale than of any homogeneous level of distribution. Wholesale price indexes and individual price series have numerous uses. One of the most important is in escalator contracts which contain a price adjustment clause. Other major uses include: study of replacement and construction costs in investment projects; analysis of price movements of both individual items and commodity groups in relation to purchases and sales; industrial planning and market analysis; valuation for tax purposes and inventory analysis; and study of changes in physical volume. They are also used by business firms abroad in connection with sales and purchases in Canada.

General Wholesale Index. —The general wholesale index mainly includes manufacturers' prices but also incorporates those of wholesalers proper, assemblers of primary products, agents and operators of other types of commercial enterprises which trade in commodities of a type, or in quantities characteristic of primary marketing functions.

* Prepared in the Prices Division, Dominion Bureau of Statistics.

Prices are grouped according to a commodity classification scheme based on chief component material similarities. Indexes classified according to degree of manufacture are also available. In Table 1, the general wholesale index is presented for the period 1937-64. This index is used as a conventional summary figure against which to observe the behaviour of particular price groups such as farm products, raw materials and building materials, for which separate price indexes have been constructed. Table 2 gives, for the years 1955-64, the general wholesale price index and two of its integral classifications—raw and partly manufactured goods, and fully and chiefly manufactured goods; also presented are two related systems—industrial materials and Canadian farm products. Annual price index numbers of non-residential building materials and residential building materials are given for 1955-64 in Tables 3 and 4, respectively. More specific indexes are published regularly in the DBS monthly publication *Prices and Price Indexes* (Catalogue No. 62-002), which also contains current series on retail and security prices. Vol. 23 of that publication is a historical summary reaching back to the year 1867 for some series.

A system of wholesale price indexes called *Industry Selling Price Indexes 1956=100*, refers exclusively to manufacturing industries and includes approximately 100 industry and 175 commodity indexes. DBS Reference Paper No. 62-515 contains tables, explanatory text, charts and weights relating to these indexes; current indexes are published monthly in *Prices and Price Indexes* (Catalogue No. 62-002).

1.—General Wholesale Index Annual Averages, 1937-64

(1935-39=100)

Year	Average	Year	Average	Year	Average	Year	Average
1937.....	107.7	1944.....	130.6	1951.....	240.2	1958.....	227.8
1938.....	102.0	1945.....	132.1	1952.....	226.0	1959.....	230.6
1939.....	99.2	1946.....	138.9	1953.....	220.7	1960.....	230.9
1940.....	108.0	1947.....	163.3	1954.....	217.0	1961.....	233.3
1941.....	116.4	1948.....	193.4	1955.....	218.9	1962.....	240.0
1942.....	123.0	1949.....	198.3	1956.....	225.6	1963.....	244.6
1943.....	127.9	1950.....	211.2	1957.....	227.4	1964.....	245.4

The general wholesale index moved slightly upward in 1964, reaching a high of 245.4. The fully and chiefly manufactured goods index advanced 0.9 p.c. and the raw and partly manufactured goods index declined 0.5 p.c. The industrial materials index rose 1.9 p.c. in the same comparison but the farm products index was 3.8 p.c. lower. The latter, however, is based on preliminary indexes for field products and total farm products, pending receipt of final participation payments from the Canadian Wheat Board.

1964.....	245.4	225.7	256.4	258.3	187.3 ^p	267.3	227.3 ^p

The price indexes of building materials* were higher in 1964. The non-residential index (1949=100) at 141.8 in December, was up from 137.6 a year earlier; the annual index was 140.6 compared with 135.5 for 1963. The residential building materials index (1935-39=100, arithmetically converted to the base 1949=100 for comparability with the non-residential index) moved up from 138.4 in December 1963 to 145.6 in December 1964; the composite for the year was 9.1 points higher than in 1963.

* Details of weighting and construction and historical series appear in DBS publications *Price Index Numbers of Residential Building Materials, 1936-48* (Catalogue No. 62-505) and *Price Index Numbers of Non-residential Building Materials, 1935-52* (Catalogue No. 62-506). Revised item list and weighting for the electrical component of the residential building materials index, effective July 1960, is available on request.

Highway Construction Price Index.—A system of annual base-weighted and current-weighted bid price indexes (1953=100) relating mainly to provincial highway construction was developed recently, by which price movement is shown for completed units of work such as earth excavation or crushed gravel in place. DBS Reference Paper 62-520 contains tables, explanatory text, charts and weights relating to these indexes. Current indexes are published from time to time in the monthly reports on *Prices and Price Indexes* (Catalogue No. 62-002).

World Wholesale Price Indexes.—Price changes within different countries have varied widely during the years. Comparisons of Canadian wholesale price indexes with those of other countries are given in Table 5.

Section 2.—Consumer Price Index*

The purpose of the consumer price index is to measure the movement from month to month in retail prices of goods and services bought by a representative cross-section of the Canadian urban population. For a particular article or service, a price index number is simply the price of the article in one period of time expressed as a percentage of its price in a reference period, usually called a base period. However, indexes for individual goods may be combined to form indexes representing prices of broad groups of goods and services. Thus, the consumer price index relates to the wide range of goods and services bought by Canadian urban families. The index expresses the combined prices of such goods each month as a percentage of their prices in the base period 1949.

The group of goods and services represented in the index is called the index "basket" and "weights" are assigned to the price indexes of individual items for purposes of combining them into an over-all or composite index. The weights reflect the relative importance of items in expenditures of middle-size urban families with medium incomes. The basket is an unchanging or equivalent quantity and quality of goods and services. Only prices change from month to month and the index, therefore, measures the effect of changing prices on the cost of purchasing the fixed basket. The basket and weights now used in the index are based on expenditures in 1957 of families of two to six persons, with annual incomes of \$2,500 to \$7,000, living in cities of 30,000 population or over.

* A comprehensive description of the index is contained in the publication *The Consumer Price Index (1949=100)*—Revision Based on 1957 Expenditures (Catalogue No. 62-518).

The behaviour of the consumer price index during the years of almost continuous economic growth following the end of the Second World War up to 1959 is discussed in the 1962 Year Book at pp. 928-929 and the movement during 1959-62 in subsequent editions.

Following a period of relative price stability, prices began to advance at a slightly higher rate in 1963, averaging 1.8 p.c. above 1962. The largest increases occurred in food (3.2 p.c.), health and personal care (2.6 p.c.) and clothing (2.5 p.c.). In 1964, the advance continued with prices again averaging 1.8 p.c. over the previous year. The groups showing the largest increases in 1964 were health and personal care (3.3 p.c.) and clothing (2.5 p.c.).

Consumer Price Indexes for Regional Cities.—Table 9 gives regional consumer price indexes for ten cities or city combinations. These indexes do not show whether it costs more or less to live in one city than in another and should not be used for such comparisons. Their function is to measure percentage changes in retail prices—over a certain time in each city or city combination—of a fixed basket of goods and services representing the level of consumption of a particular group of families.

World Retail Price Indexes.—In order to place changes in Canadian retail prices in perspective with those occurring elsewhere, Table 10 provides consumer price indexes for selected countries for 1962, 1963 and 1964. These indexes measure price changes only within each country and should not be used to compare actual levels of living costs from country to country.

Section 3.—Consumer Expenditure

A continuing program of surveys of family expenditure in urban areas was begun in 1953 and surveys were conducted since then at two-year intervals up to and including 1959. No expenditure surveys were taken in 1961, the decennial census year, but the regular program was resumed in 1962, when monthly surveys of food expenditure were made throughout the year, and a recall survey of the complete budget was made in February and March 1963. Early in 1965 a recall survey of the complete budget was made referring to the calendar year 1964.

The primary purpose in most of these surveys was to collect information for reviewing and revising, when necessary, the weights of the consumer price index. Therefore the surveys, with the exception of those for 1959 and 1964, have been restricted to cover only the families comparable in composition and income level to the consumer price index target group which was selected for index number purposes from a nation-wide survey conducted in 1947-48. For each of the four survey periods covering 1953, 1955, 1957 and 1962, respectively, the program consisted of a series of monthly surveys in which the major objective was the collection of detailed expenditure data on food, followed by a recall survey of all expenditures and income for the same calendar year. In the 1959 and 1964 survey programs, the monthly surveys were omitted and larger recall surveys were made referring, in 1959, to all families and individuals in cities with populations of 15,000 or over and, in 1964, to all families and individuals in 11 cities. Detailed results for each survey have been published in two series of occasional publications of which the latest are: *Urban Family Food Expenditure, 1962* (Catalogue No. 62-516) and *Urban Family Expenditure, 1959* (Catalogue No. 62-521).

Summary results of the 1959 survey appear in the 1962 Year Book at pp. 934-937. Summary results of the 1962 survey of family food expenditure appear in the 1965 edition, pp. 902-903. Results of the 1962 survey of the complete budget were not available at the time of printing but will be published in *Urban Family Expenditure, 1962*.

Section 4.—Security Price Indexes

Security price indexes measure, through time, the effect of price change on the value of a portfolio of stocks bought and held by a hypothetical investor (as opposed to the more speculative trader). The portfolio represents stocks of Canadian companies listed on the Toronto, Montreal and Canadian stock exchanges. In the case of the mining and

the two supplementary indexes (primary oils and gas, and uraniums), eligible issues are for producing mines and wells only. The number of shares held for each issue is in proportion to the total number of shares outstanding. Prices in the weekly common stock indexes (investors, mining and supplementary indexes) are Thursday's closing quotations. For the monthly preferred stock indexes, prices are monthly weighted averages of the daily closing prices in which weights are daily total sales. The indexes express current prices as a percentage of prices in 1956. Monthly and certain weekly indexes appear in DBS monthly publication *Prices and Price Indexes* (Catalogue No. 62-002) and a weekly DBS report gives indexes on a weekly basis for all groups and sub-groups.

The investors index is comprised of three major groups, with relative importance indicated by percentage weights as follows: industrials, 67.5; utilities, 18.6; and finance, 13.9. Each major group is further divided into industry sub-groups corresponding to the standard industrial classification, adopted as the basis of classification in the revision of the index to the 1956 = 100 base. The mining index is composed of two groups: base metals with a weight of 64.6 p.c. and golds with a weight of 35.4 p.c. The two supplementary indexes of common stocks—primary oils and gas, and uraniums—and the index of preferred stocks are not divided into component groups.

SECTION 5. TRADE BY SECTION AND BY STAGE OF FABRICATION.....	933	Part IV.—Travel Between Canada and Other Countries.....	955

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii of this volume.

The subject of foreign trade covers more than the treatment of exports and imports of commodities, important though this is. In its broader sense, foreign trade is made up of the total international interchange of goods, services, securities and other financial transactions, all of which are presented in their appropriate relationship in this Chapter and in Section 4 of Chapter XXIV. Following Part I, which is a review of Canada's commodity trade during 1964-65, Part II gives detailed statistics of that trade. Part III outlines the various ways in which the Federal Government promotes and encourages trade relationships, and contains a brief review of the Canadian tariff structure. Part IV contains a review of the extent of travel between Canada and other countries in 1964, with estimates of the amount of money expended for that purpose.

PART I.—CANADIAN MERCHANDISE EXPORTS AND IMPORTS IN 1964-65*

During 1964, business expansion continued in most of the countries with which Canada trades and Canadian exports rose at an accelerated rate. The increase over 1963 of \$1,324,000,000, or 19 p.c., compares with one of \$632,000,000 in 1963 over 1962 and was the sixth successive and substantial increase since the present phase commenced in 1959; it brought the aggregate increase in the six-year period to 69 p.c. in terms of value and 56 p.c. in terms of physical volume. Export prices, as measured by the unit value index, rose a little more than in 1963 but by only 1.4 p.c.

* Prepared by G. S. Watts, Research Department, Bank of Canada, Ottawa.

¹ See reference to "General Trade" basis, p. 914.

Prominent among the reasons for this unparalleled increase in exports was the \$275,000,000 expansion in wheat and flour exports associated with the completion of the 1963-64 contract with the Soviet Union together with larger shipments to mainland China and Eastern Europe. However, omitting this item, the remaining increase of over \$1,000,000,000 was of exceptional proportions and was shared extensively by all the main export groups except uranium which continued its declining trend, and aluminum which showed only a small increase. The increase in "Other manufactures and miscellaneous" of \$368,000,000 was particularly notable; it was much the largest increase on record for this group and brought the 1964 group total to double its 1961 level and to triple the level of a decade previously. Of the 1964 increase, \$142,000,000 was accounted for by aircraft and parts, \$88,000,000 by automobiles and parts and \$24,000,000 by farm implements; the remainder, amounting to over \$100,000,000, was widely distributed.

The pattern of distribution of exports by area in 1964 reflected the change in product components. As a result, partly but by no means wholly, of sharply expanded wheat exports, the proportion of overseas exports went up 3 p.c. in 1964 to account for 47 p.c. of

the total, the highest proportion since 1949. Apart from overseas countries to which exports were particularly affected by wheat contracts, the main increases were to Western Europe, Britain, Central America and the Antilles, Australia and Japan.

Imports, which did not begin their latest cyclical rise until 1961, also increased at a sharply accelerated rate in 1964. The increase over 1963 of \$930,000,000, or 14 p.c., was more than double that of any one of the previous three years and was in line with the higher levels of domestic business activity. The increase in import prices, as measured by the unit value index, was of the order of 1.9 p.c., substantially less than in the two preceding years. Whereas exports rose by 56 p.c. in physical volume in the six years since 1958, the increase in imports by 1964 was about 31 p.c.

The introduction of the new import classification in 1964 (see p. 915) makes it difficult to compare the pattern of the increase in imports with earlier years in some instances. Fuels and lubricants rose very slightly but industrial materials showed a substantially greater increase than in 1963. As usually occurs during the development phase of an extensive investment boom, investment goods imports rose strongly, accounting for almost 40 p.c. of the total increase in imports. The rise tended to be concentrated in machinery and parts, with other classes such as electrical equipment, transportation equipment and construction materials, etc., rising by lesser amounts. Consumer goods accounted for 30 p.c. of the increase in imports, just under half of it occurring in automobiles and parts.

The regional distribution of imports showed a further swing to the United States as the principal source in 1964. The United States accounted for 69 p.c. of all imports and overseas countries for 31 p.c. compared with 68 p.c. and 32 p.c., respectively, in 1963. However, there has been no great change in the ratio since the late 1950's and it is lower than that prevailing in earlier years. Although imports from the United States increased by 16 p.c. in 1964 and those from Britain by 9 p.c., imports from other countries also continued to attain new records, rising by 10 p.c. Imports from most Western European countries were substantially higher as were those from Japan, and there were also increased imports from Africa, Latin America and Eastern Europe, but imports from oil-producing Middle East countries were lower than in 1963.

The relatively strong behaviour of exports led to a doubling in the export balance from \$422,000,000 in 1963 to \$815,000,000 in 1964, the latter being the fourth successive year with an export balance and recording the highest such balance in many years.

In the first half of 1965, exports continued to advance but at a much slower rate, amounting to \$4,019,000,000 compared with \$3,935,000,000 in the same period of 1964, an increase of only 2 p.c. Aside from wheat, exports of which were lower by \$222,000,000 than in the first half of 1964, the rise in exports was 9 p.c. Imports, on the other hand, rose by 10 p.c. in the same comparison, a somewhat slower rate than in 1964 as a whole. The result was an import balance of \$56,000,000 in the first half of 1965 compared with an export surplus of \$233,000,000 in the first half of 1964.

Table 2, listing leading countries in world trade, by value of trade and trade per capita, indicates that Canada retained fifth position in order of magnitude for exports and advanced from seventh to sixth place in imports. On the basis of total trade, Canada continued to occupy fifth place. On a per capita basis, Canada's position in 1964 was seventh for exports, ninth for imports and eighth for total trade.

¹ Excludes China, U.S.S.R., and those countries of Eastern Europe not currently reporting trade.
² Includes military aid extended to other countries.
³ Trading countries as listed by IMF except that Aden, the Netherlands Antilles and countries with neither exports nor imports amounting to U.S. \$100,000,000 in 1964 are excluded.

PART II.—FOREIGN TRADE STATISTICS*

Section 1.—Explanatory Notes on Canadian Trade Statistics

Sources.—Canadian foreign trade statistics are compiled from information recorded on customs documents received by the Dominion Bureau of Statistics from the various customs ports in Canada with the following exceptions: *electricity* exports are based on reports received from the National Energy Board and imports are based on reports received from public utility companies; and *crude petroleum exported by pipeline*, statistics for which are reported directly to the Bureau by the pipeline companies. Record is kept of value and, whenever possible, of quantity. In considering trade figures, it should be noted that the statistics do not necessarily reflect the financial transactions relating to the movement of goods since the method and time of payment are affected by many factors.

Coverage.—*Domestic exports or exports of Canadian produce* include exports of goods wholly produced in Canada together with exports of previously imported goods that have been changed in form by further processing in Canada. *Re-exports or exports of foreign produce* include previously imported goods that are exported from Canada in the same form as when imported. From January 1964, re-exports have also included exports from customs warehouses.

Imports, as from Jan. 1, 1964, include all goods cleared by customs immediately on arrival in Canada, plus goods entered into customs warehouses rather than cleared on arrival. For 1963 and earlier years, imports included goods cleared immediately on arrival plus goods cleared for consumption out of customs warehouses. The two types of record eventually cover the same totals, except for a small amount of goods entered into customs warehouses and then re-exported, but there may be an important difference in the time at which warehoused goods are recorded as imports; some shipments entering customs warehouses remain there for several months before clearance.

The most important exclusions from export totals are: current coin, gold, goods shipped to Canadian Armed Forces or diplomats stationed abroad, goods financed under the Defence Appropriation Act and shipped to other NATO countries, temporary exports for exhibition or competition, fuel and stores sold to foreign vessels and aircraft in Canada, settlers' effects, private donations and gifts, and identifiable tourist purchases—generally, all temporary exports and goods merely moving in transit through Canadian territory.

The most important exclusions from import totals are: current coin, gold, goods for use of the United States Armed Forces stationed at treaty bases in Canada, Canadian-owned military equipment returned to Canada, ships imported for use in foreign trade and ships of British construction and registry imported for use in the coasting trade, temporary imports for exhibition or competition, fuel and stores purchased by Canadian vessels and aircraft abroad, settlers' effects, private donations and gifts, tourist purchases exempt from duty, and goods imported for foreign armed forces or diplomats stationed in Canada—generally, all temporary imports and goods merely moving in transit through Canadian territory.

Beginning Jan. 1, 1964, Canada's trade statistics are compiled on a "General Trade" basis instead of on the "Special Trade" basis used previously. The main difference for figures recorded on the General Trade basis is that imports are entered as such whether the goods are cleared through customs for immediate domestic use or stored in a customs warehouse. Domestic exports remain the same on both bases but re-exports, after Jan. 1, 1964, include exports from customs warehouses which were previously excluded. Over a period of years, the totals of Canadian exports or imports would be almost the same on either basis but considerable differences might appear in individual years because of time of clearance and extent of business activity.

* Based on statistical reports published by the External Trade Division, Dominion Bureau of Statistics.

From Jan. 1, 1960, a new category was established in both export and import statistics entitled "Special Transactions—Non-trade". This category includes certain commodity movements which either have no international financial implications or, for various reasons, are better considered separately from merchandise trade in economic analysis. The value of transactions of these types is now excluded entirely from published totals of Canadian merchandise trade and do not appear in this volume, but statistics for the classes of this category are contained in the regular monthly export and import reports.

Beginning with statistics for January 1961, a new export commodity classification was used, based on the Standard Commodity Classification developed by the DBS as a tool for integrating statistical series derived from different sources. Whereas the classification previously used classified commodities primarily according to the material of which they were chiefly composed, the new classification places commodities in sections mainly according to stage of processing and purpose, as follows: Live Animals; Food, Feed, Beverages and Tobacco; Crude Materials, Inedible; Fabricated Materials, Inedible; End Products, Inedible; and Special Transactions—Trade.

As from Jan. 1, 1964, a new commodity classification was also introduced for import statistics, based on similar concepts to those embodied in the export classification, so that there is now a closer approach to comparability between the two sets of statistics. As part of the change to the new classifications, the commodity detail shown in trade returns has been modernized by eliminating statistics on some commodities of minor significance and instituting new classes for many commodities of greater importance. The grouping system employed in the new classification also makes easier the identification of other commodities which may merit separate specification. For most of the commodities of greatest importance in Canadian exports, the classes of the new export commodity classification are substantially identical with those of its predecessor. The import classification is more extensive than the export classification and in its new form gives an up-to-date and comprehensive coverage of those commodities which constitute the bulk of Canada's import trade.

Valuation.—Export entries define the value of exports as the "actual amount received or to be received in terms of Canadian dollars, exclusive of all charges" (freight, insurance, handling, etc.). This definition would give values f.o.b. point of consignment for export but in practice it is not always followed. For example, in recent years a significant but indeterminate proportion of exports has been reported in United States dollars, resulting in some overstatement of the value of exports for the period prior to June 1961 and some understatement of their value in subsequent years.

The value of goods imported is usually the value as determined for customs duty. The Canadian Customs Act generally requires the valuation of goods f.o.b. point of shipment in the country of export but, at least in recent years, importers have often reported c.i.f. value for free goods or goods subject to specific rates of duty. An effort is made to ensure that f.o.b. values are consistently used in import statistics in the following cases: goods subject to dumping duty (from January 1959); raw cotton and crude petroleum (from January 1962, retroactive to January 1960); raw sugar (from January 1963, retroactive to January 1961); and all shipments individually valued at \$100,000 or more (from January 1964). Only about one fifth of the value of imports is covered by these specific checks.

Country Classification.—Trade is credited to countries on the basis of consignment. For exports from Canada, the country of consignment is that country to which goods are, at the time of export, intended to pass without interruption of transit except in the course of transfer from one means of conveyance to another. For imports into Canada, the country of consignment is the country from which the goods came without interruption of transit except in the course of transfer from one means of conveyance to another. This is not necessarily the country of actual origin, since goods produced in one country may be imported by a firm in another country and re-sold to Canada; in such cases the second country is the country of consignment to which the goods are credited. There is one

exception to this rule; an attempt is made to classify by country of origin goods produced in South America, Central America, Bermuda and the Antilles and consigned to Canada from the United States. The effect of this procedure is to reduce slightly the imports credited to the United States and to increase those credited to South and Central American countries.

The country sub-totals include trade with Commonwealth and other countries entitled to Preferential rates of duty (the Republic of Ireland and the Republic of South Africa).

Discrepancies in Trade Statistics Between Canada and Other Countries.—Canada's statistics of exports are rarely in exact agreement with the import statistics of its customers and parallel differences occur with Canadian imports. Major factors contributing to these discrepancies include:—

- (1) Differences in the system of valuation used by Canada and those of other countries, especially with respect to the treatment of transportation charges.
- (2) Differences in the statistical treatment of special categories of trade, such as armaments and military supplies, government-financed gift or mutual aid shipments, postal and express shipments, or warehouse trade.
- (3) Differing definitions of territorial areas.
- (4) Differing systems of crediting trade by countries, notably the consignment system used by Canada and the actual origin or ultimate destination system in use by some other countries.
- (5) Differences in the time at which trade is recorded in the statistics of partner countries caused by the time required for goods to move from one country to another.

Section 2.—Total Foreign Trade

In considering the figures in Sections 2 to 5, reference should be made to the explanatory notes on trade in Section 1. Exports and imports of gold are excluded from all tables.

1.—Value of Total Foreign Trade of Canada (excluding Gold), 1950-64

NOTE.—Figures have been revised to cover the adjustment for "Special Transactions—Non-trade"; see p. 915.

Treatment of Gold in Trade Statistics.—The general use of gold as a money metal gives it peculiar attributes that distinguish it from other commodities in trade. In particular, international movements of gold are determined largely by monetary factors rather than by ordinary trade or commercial considerations. Gold is generally acceptable; it does not have to surmount tariff barriers and is normally assured a market at a fixed

minimum price. Also, gold may be bought or sold internationally without any physical movements of the metal, such transactions being recognized by simply setting aside or 'ear-marking' the metal in the vaults of some central bank.

For these reasons, movements of gold in a primary or semi-fabricated state are excluded from the totals of Canada's commodity trade. However, since gold is produced in Canada primarily as an export commodity, a series showing new gold production available for export is published as a supplement to the trade statistics. Because this series is calculated on a production basis, a division of the figures into transactions with individual countries is not possible.

2.—New Gold Production Available for Export, by Month, 1957-64

¹ Less than \$500.² Includes Alaska and Hawaii.

The proportion of imports subject to duty varies widely between countries and geographic areas. Generally, the Canadian tariff imposes duties on a greater proportion of manufactured goods than of natural products. Countries supplying chiefly manufactures to Canada tend to have duties charged on a greater proportion of their goods and also to have relatively higher average ad valorem rates of duty charged on their goods than is the case with countries supplying chiefly natural products. Variations in the proportion of imports dutiable as between different countries or in the average ad valorem rates of duty charged on imports from different countries therefore do not necessarily indicate differences in the tariff relations between Canada and these countries.

Section 4.—Trade by Commodity

This Section provides detailed information on the composition of Canada's exports and imports for 1963 and 1964. Table 8 shows exports and re-exports to and imports from all countries, Britain and the United States, classified by section; Table 9 gives detailed statistics of all commodities of any importance exported from Canada to all countries, to Britain and to the United States; and detailed statistics for imports into Canada by group and commodity appear in Table 10. An explanation of the different classification used in the latter table is given on p. 915.

Section 5.—Trade by Section and by Stage of Fabrication

For many years the Year Book published a tabulation of exports and imports by degree of manufacture. However, with the introduction of the new export commodity classification in January 1961 and the new import commodity classification in January 1964, these tables were discontinued until new series could be produced, based on the concepts embodied in the Standard Commodity Classification from which the new commodity classifications are derived. (See p. 915.)

The Section totals for the new commodity classifications, presented here for the first time for the period from 1946, were obtained by converting statistics compiled on the old classification to the new framework. The conversion indexes are based on two test months (August 1959 and April 1960 for exports, and February 1961 and August 1963 for imports), supplemented by the results of various studies covering the 1946-64 period. The totals of the Sections (shown in Tables 11 and 12) are arrived at by converting old classes or fragments of large "basket" classes to appropriate new classes; changes in content, description or codes of former classes were taken into account as much as possible, but the results for 1957 and previous years are subject to some limitations.

To classify exports and imports by Stage of Fabrication, that is, within the categories of Crude Materials, Fabricated Materials and End Products, requires a secondary classification of the commodities in certain Sections. Live Animals (Sect. I), being a natural product, is considered as crude materials; Food, Feed, Beverages and Tobacco (Sect. II) is allocated as follows: Crude Materials includes natural products not further processed than cleaned or prepared for shipment; Fabricated Materials includes commodities which are further processed and are used in processing industries rather than for direct human consumption, and also all commercial stock feeds; End Products includes commodities which are further processed and are mainly used directly for human consumption, and also prepared pet feeds. Sects. III, IV and V are clearly defined in the Standard Commodity Classification. Sect. VI contains relatively few classes; these have been pro-rated as necessary for both exports and imports according to studies undertaken over a number of years.

11.—Domestic Exports by Section and Stage of Fabrication, 1946-64

Year	Sect. I Live Animals	Sect. II Food, Feed, Beverages and Tobacco				Sect. III Crude Materials, Inedible	Sect. IV Fabricated Materials, Inedible	Sect. V End Products, Inedible
		Crude Materials	Fabricated Materials	End Products	Total

Exports.—An analysis of the figures for 1948-64 shows that the export totals over that period followed an almost constantly upward annual trend, advancing 2.7 times; the most pronounced gains were made in 1958-64. Every Section except Live Animals recorded increases, ranging from 2.2 times for Food, Feed, Beverages and Tobacco, 2.5 times for Fabricated Materials, Inedible, 2.7 times for End Products, Inedible, to 5.2 times for Crude Materials, Inedible. During the period, Live Animals accounted for only a small proportion of the total exports, averaging slightly higher than 1.0 p.c.; Food, Feed, Beverages and Tobacco accounted for a declining proportion, ranging from 36.1 p.c. in 1946 to 18.0 p.c. in 1960; Crude Materials, Inedible recorded an increasing proportion, rising from 8.1 p.c. in 1946 to 22.0 p.c. in 1962; Fabricated Materials, Inedible accounted for the greatest proportion of the exports, averaging about 48 p.c. over the period; End Products, Inedible in the four latest years recovered the relative importance it had in 1946-49, when the over-all export totals were less than half the totals of the latest three years; Special Transactions—Trade maintained approximately the same small relative importance of 0.2 p.c.

Analysis of exports by Stage of Fabrication shows that Crude Materials in 1964 accounted for 36.6 p.c. of total exports, having increased 3.4 times since 1948 with larger advances in 1960-64. Fabricated Materials increased 2.4 times since 1948 and accounted for a decreased proportion of about 48 p.c. in the four latest years; End Products, although lower during a good portion of the 1948-64 period, increased substantially in the four latest years to a figure more than double the 1948 total.

Imports.—Total imports also showed a generally increasing trend, advancing 2.9 times during the period 1948-64, but the aggregate gains since 1960 were less than those shown by exports. Live Animals, which accounted for only about 0.1 p.c. of total imports, increased 5.0 times in value; Food, Feed, Beverages and Tobacco, which accounted for about 10 p.c. of the total, increased 2.8 times; Crude Materials, Inedible showed a consistently decreasing relative importance from a peak of 26.2 p.c. in 1948 to 12.9 p.c. in 1964 but increased 1.4 times during the period; Fabricated Materials, Inedible, which also decreased in importance from 28.3 p.c. to 24.2 p.c., increased 2.4 times; End Products, Inedible, the proportion for which fluctuated around 48 p.c. over the past ten years, increased 4.2 times; and Special Transactions—Trade, maintaining a 2.0-p.c. proportion of the total, rose 7.2 times over the period.

In the Stage of Fabrication analysis, Crude Materials, while increasing 1.7 times in the 1948-64 period, accounted for a relatively decreasing proportion of total imports, dropping from a peak of 30.4 in 1950 to an average of about 20 p.c. in 1954-64; Fabricated Materials increased 2.4 times in 1948-64, with marked advances in the 1954-64 period, but contributed a slightly diminishing proportion of some 28 p.c. in the period; End Products advanced 4.2 times the 1948 value with pronounced increases in the 1954-64 period and accounted for 54.2 p.c. of the total in 1962 compared with 36.4 p.c. in 1948, but averaging about 52.0 p.c. over the period 1954-64.

PART III.—THE GOVERNMENT AND FOREIGN TRADE

Section 1.—Federal Foreign Trade Services*

Foreign trade contributes substantially to the welfare and prosperity of Canadians, largely because the productive capacity of Canada is greater than the ability of its population to consume the output of farms, factories, forests, fisheries and mines. Every effort

* Prepared in the several branches and agencies concerned, and collated in the Trade Publicity Branch, Department of Trade and Commerce, Ottawa.

is made, therefore, to establish and maintain close commercial relations with other countries whose markets are essential to the Canadian economy. It is appreciated, however, that two-way trade should be encouraged so that goods and services may be accepted in partial payment for the products Canada is in a position to export. Furthermore, many commodities not indigenous to this country must be imported. Some of these are required for industrial processes and others may be classed as consumer goods necessary for the maintenance of the Canadian standard of living.

Although numerous private firms have established connections in other countries that enable them to maintain a steady flow of goods in either direction, others require the assistance of government agencies in finding markets or sources of supply. Import and export controls imposed by many countries for a variety of reasons, together with foreign exchange difficulties, present problems that no single firm or even an association of manufacturers, exporters or importers can solve without assistance from government representatives. The federal Department of Trade and Commerce, the primary function of which is the promotion of external trade, makes available to business men a wide variety of services to assist them in selling their products abroad. These services are provided by the Department's head office in Ottawa, six regional offices in Canada, and a corps of trade commissioners stationed around the world.

Services available from the various branches, divisions and agencies of the Department of Trade and Commerce are described below. The work of these entities is inter-related, each operating in its own field but working closely with the others to effect the over-all objective of trade promotion.

Trade Commissioner Service.—The Trade Commissioner Service is the overseas arm of the Department and is actively engaged in the promotion of Canadian trade and the protection of Canada's commercial interests; 67 offices are maintained in 48 countries, of which 47 posts form part of Canadian Government diplomatic missions abroad and 18 are separate trade commissioner posts.

Every effort is made by the trade commissioners to bring Canadian exporters and prospective buyers together. On their own initiative, and in response to requests from the Department and Canadian business men, they study potential markets for specific Canadian commodities and services. Reports are provided on the demand in the country concerned, prices, competition, trade and exchange regulations, tariffs, shipping and packaging requirements, credit terms, channels of distribution, labelling regulations, etc. Inquiries from local business men for goods obtainable from Canada are forwarded to the Department in Ottawa, or directly to Canadian firms in a position to supply the products required.

The supervision of Canadian exhibits at overseas trade fairs and the provision of assistance to participating Canadian firms is an important function of many offices. Trade commissioners make local arrangements for and travel with Canadian trade missions visiting overseas markets. They also seek sources of supply for a wide variety of goods on behalf of Canadian importers.

In developing trade opportunities, Canada's trade commissioners travel extensively in their territories, visit leading industrial and commercial centres, and call on government officials, business men, trade associations and municipal authorities. They establish social contacts with commercial interests, thereby developing goodwill for Canada and Canadian products, while creating connections for Canadian exporters and facilitating the collection of trade information. They return to Canada at periodic intervals and make tours of Canadian industrial and commercial centres. Such direct contacts enable them to discuss specific problems with business men and bring into focus the Canadian commercial scene.

In countries where Canada has a diplomatic mission, the Canadian trade office is the commercial division and the trade commissioner has the rank of Minister (Commercial), Minister-Counsellor (Economic), Commercial Counsellor or Commercial Secretary. When attached to a consulate, he carries the title of Deputy Consul General (Commercial), Consul (Commercial), or Vice-Consul (Commercial), according to his rank, in addition to that of Trade Commissioner. He may also be the Consul General, in charge of the office. Where trade offices are detached and do not form part of a diplomatic mission, the trade commissioner may also be required to undertake consular, immigration and other duties as the sole representative of Canada.

CANADIAN FOREIGN TRADE OFFICES ABROAD, AS AT AUG. 22, 1965

ARGENTINA.—Commercial Counsellor, Canadian Embassy, Bartolome Mitre 478, Buenos Aires. Territory includes Paraguay.

AUSTRALIA.—

Sydney: Commercial Counsellor for Canada, 21st Floor A.M.P. Bldg., Circular Quay, Sydney. Mail: P.O. Box 3952 G.P.O.

Melbourne: Commercial Counsellor for Canada, Mobil Centre, 2 City Road, Melbourne.

Canberra: Commercial Counsellor, Office of the High Commissioner for Canada, Commonwealth Ave., Canberra.

AUSTRIA.—Minister-Counsellor (Commercial), Obere Donaustrasse 49/51, Vienna II. Mail: P.O. Box 190, Vienna 1/8. Territory includes Albania, Bulgaria, Czechoslovakia, Hungary, Romania and Yugoslavia.

BELGIUM.—Commercial Counsellor, Canadian Embassy, 35 rue de la Science, Brussels 4. Territory includes Luxembourg, European Economic Community, European Atomic Energy Community and European Coal and Steel Community.

BRAZIL.—

Rio de Janeiro: Commercial Counsellor, Canadian Embassy, Edificio Metropole, Av. Presidente Wilson 165, Rio de Janeiro. Mail: Caixa Postal 2164-ZC-00.

São Paulo: Consul and Trade Commissioner, Canadian Consulate, Edificio Alois, Rua 7 de Abril 252, São Paulo. Mail: Caixa Postal 6034.

BRITAIN.—

London: Minister (Commercial), Office of the High Commissioner for Canada, One Grosvenor Square, London W.1.

Liverpool: Canadian Government Trade Commissioner, Martins Bank Bldg., Water Street, Liverpool.

Glasgow: Canadian Government Trade Commissioner, Cornhill House, 144 West George St., Glasgow C.2, Scotland.

Belfast: Canadian Government Trade Commissioner, 15-17 Chichester St., Belfast 1, Northern Ireland.

CAMEROON.—Commercial Division, Canadian Embassy, Soppo Priso Bldg., rue Joseph Clerc, Yaounde. Mail: P.O. Box 572. Territory includes Central African Republic, Chad, Congo (Brazzaville) and Gabon.

CEYLON.—Commercial Division, Office of the High Commissioner for Canada, 6 Gregory's Road, Cinnamon Gardens, Colombo. Mail: P.O. Box 1006.

CHILE.—Commercial Counsellor, Canadian Embassy, 5th Floor, Agustinas 1225, Santiago. Mail: Casilla 771.

COLOMBIA.—Commercial Secretary, Canadian Embassy, Edificio Banco de Los Andes, Carrera 10, No. 16-92, Bogota. Airmail: Apartado Aereo 8582. Surface Mail: Apartado 1618. Territory includes Ecuador.

CONGO.—Chargé d'Affaires, Canadian Embassy, C.C.C.I. Bldg., Boulevard Albert 1^{er}, Leopoldville 1. Mail: Boîte Postale 8341.

- CUBA.—Commercial Division, Canadian Embassy, Calle 30, No. 518, esquina 7a Avenida, Miramar, Havana. Mail: Gaveta 6125.
- DENMARK.—Commercial Counsellor, Canadian Embassy, Prinsesse Maries Allé 2, Copenhagen V. Territory includes Greenland and Poland.
- DOMINICAN REPUBLIC.—Acting Commercial Secretary, Canadian Embassy, Edificio Copello 408, Calle El Conde, Santo Domingo. Mail: Apartado 1393. Territory includes Puerto Rico.
- FRANCE.—Minister-Counsellor (Economic/Commercial), Canadian Embassy, 35 Ave. Montaigne, Paris 8^e. Territory includes Algeria and Morocco.
- GERMANY.—
Bad Godesberg: Commercial Counsellor, Canadian Embassy, Kennedy-Allee 35, Bad Godesberg.

VENEZUELA.—Commercial Secretary, Canadian Embassy, Avenida La Estancia No. 10, Ciudad Comercial Tamanaco, Caracas. Mail: Apartado 11452-Este. Territory includes Netherlands Antilles.

Trade Fairs and Missions Branch.—It is the responsibility of this Branch to organize and co-ordinate the Department's annual program of participation in trade fairs abroad and of outgoing and incoming trade missions. The Trade Fairs Abroad Division and the Trade Missions Division co-ordinate departmental activity in implementing these promotion programs and in organizing the trade fair exhibits and trade missions scheduled during the year. The Branch Director acts as chairman of the departmental committees that select the program and the Division Chiefs preside over working committees appointed to handle detailed planning. The Branch also provides liaison with Trade Commissioner Service posts abroad, trade associations in Canada, provincial governments and other federal departments or agencies in the development of trade promotion programs.

In 1965 the Department of Trade and Commerce sponsored exhibits in 43 trade fairs abroad in such key markets as the United States, England, Japan, West Germany, France, Italy and Scotland. The products of hundreds of Canadian manufacturers were exhibited to potential foreign buyers numbering more than 15,000,000. The 20 trade missions organized in 1965 included 15 teams of Canadian business men sent abroad to study special markets in Europe, the United States, Africa, Latin America and South-East Asia and five groups of business visitors brought to Canada from Europe and the Caribbean.

Office of Trade Relations.—The main function of the Office of Trade Relations is to safeguard and improve terms of access for Canadian exporters in foreign markets. The Office is concerned with the conduct of Canadian trade relations with other countries, including the negotiation and administration of trade agreements and Canadian participation in international conferences and meetings dealing with trade and economic matters. It endeavours to find practical solutions for tariff problems and other difficulties encountered in foreign markets by Canadian exporters and, as a service to exporters, provides expert information, advice and assistance on foreign tariffs, import and exchange controls, documentation requirements and other foreign governmental regulations affecting Canada's trade. The Office also has responsibilities in relation to the export financing facilities available for the development of exports of Canadian capital equipment. The Area Divisions of the Office—Commonwealth, United States, European, Latin American and Asia and Middle East—are the central points of contact between Canada's trade commissioners abroad and the Department in Ottawa.

Transportation and Trade Services Branch.—The functions of this Branch relate to transportation problems, export and import controls, trade directories, the administration of the six Regional Offices and the provision of general guidance to firms seeking entry into the export field. These activities are conducted by three Divisions: the Transportation

Division is concerned primarily with industrial transportation from the user's point of view, keeping in touch with developments and trends in shipping services and in freight rates; the Export and Import Permits Division administers the controls established under the Export and Import Permits Act; and the Regional Offices and Trade Services Division administers the Department's Regional Offices and compiles the Exporters' Directory, a confidential list of firms engaged in or seriously interested in exporting commodities or services.

Commodity Branches.—The Commodities and Industries Services include three commodity branches—the Agriculture and Fisheries Branch, the Industrial Materials Branch and the Manufacturing Industries and Engineering Branch. These branches provide the main link between industry and the Department; they maintain close contact with the business community to be familiar with production and supply conditions in Canada. Emphasis is placed on the search for products and services, the sale of which can be promoted abroad.

The Agriculture and Fisheries Branch is organized into five divisions to cover fisheries, grain, livestock and animal products, plant products, and commodity arrangements and market developments. The Industrial Materials Branch is composed of three divisions to handle chemicals, forest products and metals and minerals. The Manufacturing Industries and Engineering Branch is organized into four divisions responsible for appliances and commercial machinery, electrical and electronic equipment, mechanical equipment and engineering, and textiles and consumer goods. These divisions are staffed by commodity officers who are specialists in their fields and are available to assist Canadian business men.

Commodity officers visit manufacturing plants and production facilities, attend and address meetings of business associations and study groups and prepare product reports and market surveys. They constitute the principal channel through which information on Canadian products and services reaches Canadian trade commissioners abroad and a channel through which information on sales opportunities in countries abroad is disseminated to industry in Canada. They continually analyse reports from trade commissioners abroad to determine potential markets for commodities and services of interest to Canadian industry. In co-operation with the Canadian Government Exhibition Commission, they assist in making arrangements for the display of commodities in trade fairs throughout the world to introduce Canadian products into new markets. They organize and accompany departmental trade missions and serve as delegates to international commodity conferences to study world market conditions and to consider corrective adjustments.

Trade Publicity Branch.—The function of the Trade Publicity Branch is to stimulate interest in Canadian products in foreign markets and to encourage Canadian manufacturers to look beyond domestic horizons. Advertising, public relations and publicity techniques are used in varying combinations to accomplish these objectives. Advertising, periodicals, booklets, brochures and other printed matter are used in direct support of trade fairs and missions; news releases, radio tape recordings and television film clips are employed to inform Canadians of foreign trade opportunities and successes.

The Branch is composed of an Operations Group and five Divisions. The Operations Group plans and executes the major activities concerning trade fairs and in-store promotions. Working closely with that Group is the Editorial Division which employs writers and editors, and the Art Division which is responsible for design, production and technical work. The Media Relations Division prepares and distributes press releases, articles, photographs, speeches and background material to newspapers, radio and television stations, magazines and the Canadian trade press. It provides publicity material for distribution abroad and produces and distributes films and television clips to promote interest in Canada as a supplier of many commodities. The Canada Courier Division produces *Canada Courier*, an illustrated, eight-page international trade promotion newspaper, published on behalf of Canadian exporters to promote products and services abroad. It has a circulation of 97,000 and is distributed in more than 100 countries. The English edition

is published six times a year and the French, Spanish and German editions twice annually. The Foreign Trade Division publishes the magazine *Foreign Trade*, fortnightly, and *Commerce extérieur*, monthly. These journals, designed to help Canadian exporters, contain information on overseas markets, tariffs, exchange rates and other pertinent trade data.

Canadian Government Exhibition Commission.—The Commission organizes, designs, produces and administers all Canadian exhibits at fairs and exhibitions abroad in which the Canadian Government participates and also advises private exhibitors and their agents on the best means of displaying Canadian products at trade fairs. It acts as a central service agency for all government departments and agencies in the preparation of conventional exhibits and displays for showing in Canada and is responsible for international fairs and exhibitions held in Canada that are financed and sponsored by the Government of Canada.

Canadian Government Travel Bureau.—The Canadian Government Travel Bureau is in operation to encourage tourist travel to Canada and to co-ordinate the tourist promotion conducted by the provinces, transportation companies and national, regional and local tourist associations. The Bureau undertakes extensive tourist advertising campaigns abroad, provides tourist publicity material for foreign newspapers, magazines, radio and television outlets, and annually handles about 1,500,000 inquiries from potential visitors to Canada. Tourist offices are operated in New York, Chicago, San Francisco, Minneapolis, Los Angeles, Boston, Philadelphia, Cincinnati, Rochester, Indianapolis, Cleveland, Detroit and Seattle in the United States; the Bureau also has representation in London, Paris, Frankfurt, Mexico City and Tokyo.

Export Credits Insurance Corporation.—This Corporation was established under the provisions of the Export Credits Insurance Act, 1944 (RSC 1952, c. 105, as amended) and is administered by a Board of Directors that includes the Deputy Minister of Trade and Commerce and the Deputy Minister of Finance. It operates in two fields—export credits insurance and export financing.

Insurance is available to all persons or corporations carrying on business in Canada to cover export sales made on customary credit terms. It provides protection against risks involved in the export, manufacture, treatment or distribution of goods, or the rendering of engineering, construction, technical or similar services. The main risks covered include: insolvency or protracted default on the part of the buyer; exchange restrictions in the buyer's country preventing the transfer of funds to Canada; cancellation of an import licence or the imposition of restrictions on the importation of goods not previously subject to restrictions; the occurrence of war between the buyer's country and Canada, or of war, revolution, etc., in the buyer's country. The insurance is available under three main classifications—general commodities, capital goods and services. General commodities policies cover a policyholder's export sales to all countries except the United States for a period of one year, and are renewable. Two types are available: the contracts policy, which insures an exporter against loss from the time he books an order until payment is received; or the shipments policy, obtainable at lower rates of premium and covering the exporter from the time of shipment until payment is received. Insurance of capital goods offers protection to exporters dealing in plant equipment, heavy machinery, etc., where extended credit up to a maximum of five years may be necessary. Specific policies are issued for transactions involving capital goods but the general terms and conditions are the same as those applicable to policies for general commodities. Specific policies are also issued to cover engineering, construction, technical or similar service contracts entered into between Canadian firms and persons in foreign countries who have agreed to purchase such services.

The Corporation insures exporters on a co-insurance basis, the exporter retaining a small percentage of the risk involved, and the same principle operates in the distribution of recoveries obtained after the payment of a claim. When, in the opinion of the Minister of

Trade and Commerce, a proposed transaction is in the national interest but would impose upon the Corporation a liability for a term or in an amount in excess of that normally undertaken, the Corporation may be authorized by the Governor in Council to enter into a contract of insurance at the Government's risk.

The Corporation also administers direct financing facilities available under the Act in cases where export sales involving capital goods are of such a nature as to warrant credit terms in excess of five years. The Corporation, when authorized by the Governor in Council, buys the promissory notes or other negotiable instruments of the foreign purchaser.

Section 2.—The Development of Tariffs

Limitations of space in the Year Book have made it necessary, in regard to tariffs, to adopt the policy of confining any detail regarding commodities and countries to tariff relationships in force at present and to summarize as much as possible historical data and details of preceding tariffs.

Subsection 1.—The Canadian Tariff Structure*

The Canadian Tariff consists, in the main, of three sets of tariff rates—British Preferential, Most-Favoured-Nation, and General.

British Preferential Tariff rates are, with some exceptions, the lowest rates. They are applied to imported commodities from British countries, with the exception of Hong Kong, when conveyed without trans-shipment from a port of any British country enjoying the benefits of the British Preferential Tariff into a port of Canada. Some Commonwealth countries have trade agreements with Canada which provide for rates of duty, on certain specified goods, lower than the British Preferential rates.

Most-Favoured-Nation rates are usually higher than the British Preferential rates and lower than the General Tariff rates. They are applied to commodities imported from countries with which Canada has trade agreements. These rates would apply to British countries when they are lower than the British Preferential Tariff rates. The most important trade agreement concerning the effective rates applied to goods imported from countries entitled to Most-Favoured-Nation rates is the General Agreement on Tariffs and Trade (GATT).

General Tariff rates are applied to goods imported from the few countries with which Canada has not made trade agreements.

There are numerous goods which are duty free under the British Preferential Tariff, or under both the British Preferential and Most-Favoured-Nation Tariffs, or under all Tariffs.

Valuation.—In general, the Customs Act provides that the value for duty of imported goods shall be the fair market value of like goods as established in the home market of the exporter at the time when and place from which the goods are shipped directly to Canada when sold "(a) to purchasers located at that place with whom the vendor deals at arm's length and who are at the same or substantially the same trade level as the importer, and (b) in the same or substantially the same quantities for home consumption in the ordinary course of trade under competitive conditions". In cases where like goods are not sold for home consumption but similar goods are sold, the value for duty shall be the cost of production of the goods imported plus an amount for gross profit equal in percentage to that earned on the sale of similar goods in the country of export. The value for duty ordinarily may not be less than the amount for which the goods were sold to the purchaser in Canada, exclusive of all charges thereon after their shipment from the country of export. Internal taxes in the country of export (when not incurred on exported goods), the cost of shipping

* Information relating to rate of duty and value for duty is available from the Department of National Revenue, Customs and Excise Division, which administers the Customs Act and the Customs Tariff.

goods to Canada and similar charges do not normally form part of the value for duty. There are, of course, further provisions for determining value for duty under the Act.

Dumping.—Sect. 6 of the Customs Tariff provides that when the actual selling price of goods being imported is less than the fair market value and the goods are of a class or kind made or produced in Canada, a special or dumping duty shall be collected. This duty is to be equal to the difference between the actual selling price and the fair market value of the goods, except that it may not be more than 50 p.c. ad valorem. These provisions are designed to offset the advantage foreign exporters may achieve by exporting to Canada at less than the going prices in the country of export.

Drawback.—There are provisions in the Customs and Excise Tax Acts for the repayment of a portion of the duty, sales and/or excise taxes paid on imported goods used in the manufacture of products later exported. The purpose of these drawbacks (as these repayments are called) is to assist Canadian manufacturers to compete in foreign markets with foreign producers of similar goods. A second class of drawback, known as "home consumption" drawbacks, is provided for under the Customs Act and the Customs Tariff Act and applies to imported materials and/or parts used in the production of specified goods to be consumed in Canada.

The Tariff Board.—The organization and functions of the Tariff Board are described at p. 127 of this volume.

Subsection 2.—Tariff and Trade Arrangements with Other Countries as at Dec. 31, 1964

Canada's tariff arrangements with other countries fall into three main categories: trade agreements with a number of Commonwealth countries; the General Agreement on Tariffs and Trade (GATT); and other agreements and arrangements.

The Commonwealth countries with which Canada has trade agreements providing for exchange of preferential rates are: Australia, Bahamas, Barbados, Bermuda, British Guiana, British Honduras, Jamaica, the Leeward and Windward Islands, Trinidad and Tobago, New Zealand, Britain and its dependent territories and the members of the former Federation of Rhodesia and Nyasaland (Malawi, Rhodesia and Zambia). Canada also exchanges preferences with Ceylon, Cyprus, Malaysia, Malta and Sierra Leone and accords preferences to India, Pakistan, Ghana, Nigeria, Kenya, Tanzania and Uganda. Many of these countries are also members of the GATT. In addition, Canada has trade agreements with Ireland and South Africa under which preferences are exchanged.

Canada signed the Protocol of Provisional Application of the General Agreement on Tariffs and Trade on Oct. 30, 1947, and brought the General Agreement into force on Jan. 1, 1948. The Agreement provides for scheduled tariff concessions and the exchange of most-favoured-nation treatment among the contracting parties, and lays down rules and regulations to govern the conduct of international trade.

The membership of the GATT increased by four during 1964 and at the end of the year there were 64 full members. These countries and the effective dates of their accession are indicated in the list on pp. 948-955. In addition, Switzerland, Tunisia, Argentina, Yugoslavia, the United Arab Republic and Iceland are provisional members. The GATT is applied on a *de facto* basis to a number of newly independent states, Algeria, Burundi, Congo (Leopoldville), Mali and Rwanda, pending final decisions as to their future commercial policy. Two other countries, Cambodia and Poland, although not members, participate in the work of the GATT.

Trade relations between Canada and a number of other countries are governed by trade agreements of various kinds, by exchange of most-favoured-nation treatment under Orders in Council, by continuation to newly independent states of the same treatment originally negotiated with the countries previously responsible for their commercial relations, and by even less formal arrangements.

Tariff and Trade Arrangements with Commonwealth Countries as at Dec. 31, 1964

Country	Agreement	Principal Terms
AUSTRALIA.....	Trade Agreement signed Feb. 12, 1960; in force June 30, 1960. GATT effective Jan. 1, 1948.	Agreement includes schedules of tariff rates and exchange of British preferential rates on items not scheduled. May be terminated on six months notice.
BRITAIN.....	Trade Agreement signed Feb. 23, 1937, effective Sept. 1, 1937; modified by exchanges of letters Nov. 16, 1938 and Oct. 20, 1947. GATT effective Jan. 1, 1948.	Various concessions are granted by each country including exchange of preferential tariff rates. The Agreement (as modified) includes provisions relating to the Colonies, Dependencies and Trustships.
BRITISH CARIBBEAN, BAHAMAS, BARBADOS, BERMUDA, BRITISH GUIANA, BRITISH HONDURAS, THE LEEWARD ISLANDS, AND THE WINDWARD ISLANDS.	Canada-West Indies Trade Agreement signed July 6, 1925, in force Apr. 30, 1927; Canadian notice of termination of Nov. 23, 1938, was replaced by notice of Dec. 27, 1939, which continued the Agreement. Barbados, Bermuda, British Guiana, British Honduras and the Leeward and the Windward Islands participate in GATT.	The parties exchange specified tariff preferences. Agreement may be terminated on six months notice.
CEYLON.....	Relations continue to be governed by Trade Agreement of 1937 with Britain. GATT effective July 29, 1948.	Canada and Ceylon exchange preferential tariff treatment.
CYPRUS.....	Relations continue to be governed by Trade Agreement of 1937 with Britain. GATT effective Aug. 16, 1960.	Canada exchanges preferential treatment with Cyprus.
GHANA.....	Relations continue to be governed by Trade Agreement of 1937 with Britain GATT effective Oct. 18, 1957.	Canada accords Ghana the British preferential rates, except on cocoa beans. Exchange of most-favoured-nation treatment.
INDIA.....	Since 1897 Canada has unilaterally accorded British preferential treatment without contractual obligation. GATT effective July 8, 1948.	Canada accords British preferential treatment to India. Exchange of most-favoured-nation treatment.
JAMAICA.....	Relations continue to be governed by Canada-West Indies Trade Agreement (see British Caribbean). GATT effective Aug. 8, 1962.	The parties exchange specified tariff preferences. Agreement may be terminated on six months notice.
KENYA.....	Relations continue to be governed by Trade Agreement of 1937 with Britain. GATT effective Dec. 12, 1963.	Canada accords British preferential treatment to Kenya. Exchange of most-favoured-nation treatment.
MALAWI.....	Relations continue to be governed by Trade Agreement of 1937 with former Federation of Rhodesia and Nyasaland. GATT effective July 6, 1964.	Canada exchanges preferential treatment with Malawi.
MALAYSIA.....	Relations continue to be governed by Trade Agreement of 1937 with Britain. GATT effective Sept. 16, 1953.	Canada and Malaysia exchange preferential tariff treatment.
MALTA.....	Relations continue to be governed by Trade Agreement of 1937 with Britain. GATT effective Sept. 21, 1964.	Canada exchanges British preferential treatment with Malta.
NEW ZEALAND.....	Trade Agreement signed Apr. 23, 1932; in force May 24, 1932. GATT effective July 26, 1948.	The parties exchange specific preferences on scheduled goods and reciprocally concede British preferential rates on items not scheduled. May be terminated on six months notice.

**Tariff and Trade Arrangements with Commonwealth Countries as at
Dec. 31, 1964—concluded**

Country	Agreement	Principal Terms
NIGERIA, FEDERATION OF.....	Relations continue to be governed by Trade Agreement of 1937 with Britain GATT effective Oct. 1, 1960.	Canada accords British preferential treatment to Nigeria. Exchange of most-favoured-nation treatment.
PAKISTAN.....	Canada unilaterally accords British preferential treatment without contractual obligation. GATT effective July 30, 1948.	Canada accords British preferential treatment to Pakistan. Exchange of most-favoured-nation treatment.
RHODESIA.....	Relations continue to be governed by Trade Agreement of 1958 with former Federation of Rhodesia and Nyasaland. GATT effective in Southern Rhodesia, May 19, 1948; extended to Federation Oct. 29, 1954; resumed its full membership in GATT Jan. 1, 1964.	Canada and Rhodesia exchange preferential tariff treatment.
SIERRA LEONE.....	Relations continue to be governed by Trade Agreement of 1937 with Britain. GATT effective Apr. 27, 1961.	Canada and Sierra Leone exchange preferential tariff treatment.
TRINIDAD AND TOBAGO.....	Relations continue to be governed by Canada-West Indies Trade Agreement. GATT effective Aug. 31, 1962.	The parties exchange specified tariff preferences. Agreement may be terminated on six months notice.
UGANDA.....	Relations continue to be governed by Trade Agreement of 1937 with Britain. GATT effective Oct. 9, 1962.	Canada accords British preferential treatment to Uganda. Exchange of most-favoured-nation treatment.
UNITED REPUBLIC OF TANZANIA.	Relations continue to be governed by Trade Agreement of 1937 with Britain. GATT effective for Tanganyika Dec. 9, 1961 and extended to Zanzibar upon formation of United Republic Apr. 23, 1964.	Canada accords British preferential treatment to the United Republic of Tanzania. Exchange of most-favoured-nation treatment.
WESTERN SAMOA.....	Relations continue to be governed by Trade Agreement of 1932 with New Zealand.	The parties exchange specific preferences on scheduled goods and reciprocally concede British preferential rates on items not scheduled.
ZAMBIA.....	Relations continue to be governed by Trade Agreement of 1958 with former Federation of Rhodesia and Nyasaland. GATT has <i>de facto</i> application for Zambia for a two-year period effective Oct. 24, 1964.	Canada exchanges preferential treatment with Zambia. Exchange of most-favoured-nation treatment.

**Tariff and Trade Arrangements with Non-Commonwealth Countries as at
Dec. 31, 1964**

Country	Agreement	Principal Terms
ALGERIA.....	Franco-Canadian Trade Agreement of 1933 applied to Algeria. Algeria maintains a <i>de facto</i> application of the GATT.	Since the creation of Algeria as an independent state in 1962, Canada has continued to grant most-favoured-nation treatment.

**Tariff and Trade Arrangements with Non-Commonwealth Countries as at
Dec. 31, 1964—continued**

Country	Agreement	Principal Terms
ARGENTINA.....	Trade Agreement signed Oct. 2, 1941; provisionally in force Nov. 15, 1941. Argentina has acceded to GATT provisionally.	Exchange of most-favoured-nation treatment. Provisional application may be terminated on three months notice.
AUSTRIA.....	GATT effective Oct. 19, 1951.	Exchange of most-favoured-nation treatment.
BELGIUM-LUXEMBOURG.....	Convention of Commerce with Belgium-Luxembourg Economic Union (including Belgian colonies) entered into effect Oct. 22, 1924. GATT effective Jan. 1, 1948.	Exchange of most-favoured-nation treatment. May be terminated on one years notice.
BENELUX (BELGIUM-NETHERLANDS-LUXEMBOURG CUSTOMS UNION).	(See Belgium-Luxembourg and Netherlands.)	
BOLIVIA.....	Order in Council of July 20, 1935, accepted Article 15 of U.K.-Bolivia Treaty of Commerce of Aug. 1, 1911.	Exchange of most-favoured-nation treatment. May be terminated on one years notice.
BRAZIL.....	Trade Agreement signed Oct. 17, 1941; provisionally in force from date of signing and definitively on Apr. 16, 1943. GATT effective July 31, 1948.	Exchange of most-favoured-nation treatment.
BULGARIA.....	Trade Agreement signed Oct. 8, 1963; provisionally in force from date of signing.	Exchange of most-favoured-nation treatment and undertaking by Bulgaria to purchase a minimum of 300,000 metric tons of wheat or equivalent in flour during the three years validity of the Agreement.
BURMA.....	GATT effective July 29, 1948.	Exchange of most-favoured-nation treatment.
BURUNDI.....	Burundi maintains a <i>de facto</i> application of the GATT.	Canada grants most-favoured-nation treatment.
CAMBODIA.....	Franco-Canadian Trade Agreement of 1933 applied to Cambodia. Although not a full member, Cambodia takes part in the work of GATT under a special arrangement.	Since the creation of Cambodia as an independent state in 1955, Canada has continued to grant most-favoured-nation treatment.
CAMEROON.....	Franco-Canadian Trade Agreement of 1933 applied to Cameroon. GATT effective Nov. 28, 1960.	Exchange of most-favoured-nation treatment.
CENTRAL AFRICAN REPUBLIC...	Franco-Canadian Trade Agreement of 1933 applied to Central African Republic. GATT effective Aug. 14, 1960.	Exchange of most-favoured-nation treatment.
CHAD.....	Franco-Canadian Trade Agreement of 1933 applied to Chad. GATT effective Aug. 11, 1960.	Exchange of most-favoured-nation treatment.
CHILE.....	Trade Agreement signed Sept. 10, 1941; provisionally in force Oct. 15, 1941, and definitively on Oct. 29, 1943. GATT effective Mar. 16, 1948.	Exchange of most-favoured-nation treatment.
CHINA.....	<i>Modus vivendi</i> signed Sept. 26, 1946. Covers the territory of China and Taiwan.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
COLOMBIA.....	Treaty of Commerce with Britain of Feb. 16, 1866, applies to Canada. Modified by protocol of Aug. 20, 1912, and exchange of notes Dec. 30, 1938.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.

**Tariff and Trade Arrangements with Non-Commonwealth Countries as at
Dec. 31, 1964—continued**

Country	Agreement	Principal Terms
CONGO (BRAZZAVILLE).....	Franco-Canadian Trade Agreement of 1933 applies to Congo (Brazzaville). GATT effective Aug. 15, 1960.	Exchange of most-favoured-nation treatment.
CONGO (LEOPOLDVILLE).....	Belgo-Canadian Convention of Commerce of 1924 applied to Congo (Leopoldville). Maintains a <i>de facto</i> application of the GATT.	Since the Congo's independence in 1960, Canada has continued to grant most-favoured-nation treatment.
COSTA RICA.....	<i>Modus vivendi</i> signed Nov. 18, 1950; brought into force Jan. 26, 1951.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
CUBA.....	GATT effective Jan. 1, 1948.	Exchange of most-favoured-nation treatment.
CZECHOSLOVAKIA.....	Convention of Commerce signed Mar. 15, 1928; in force Nov. 14, 1928. GATT effective May 21, 1948.	Exchange of most-favoured-nation treatment. May be terminated on one years notice.
DAHOMEY.....	Franco-Canadian Trade Agreement of 1933 applied to Dahomey. GATT effective Aug. 1, 1960.	Exchange of most-favoured-nation treatment.
DENMARK (INCLUDING GREENLAND).	Treaties of Peace and Commerce with Britain of Feb. 13, 1960 and July 11, 1970, apply to Canada. GATT effective May 28, 1950.	Exchange of most-favoured-nation treatment. Declaration of May 9, 1912 provides means for separate termination by Dominions on one years notice.
DOMINICAN REPUBLIC.....	Trade Agreement signed Mar. 8, 1940; in force Jan. 22, 1941. GATT effective May 19, 1950.	Exchange of most-favoured-nation treatment including scheduled concessions.
ECUADOR.....	<i>Modus vivendi</i> signed Nov. 10, 1950; in force Dec. 1, 1950.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
EGYPT.....	(See United Arab Republic.)	
EL SALVADOR.....	Exchange of notes of Nov. 2, 1937; in force Nov. 17, 1937.	Exchange of most-favoured-nation treatment. May be terminated on four months notice.
ETHIOPIA.....	Exchange of notes effective June 3, 1955.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
FINLAND.....	Exchange of notes of Nov. 13-17, 1948; effective Nov. 17, 1948. GATT effective May 25, 1950.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
FRANCE AND FRENCH OVERSEAS TERRITORIES.	Trade Agreement signed May 12, 1933; in force June 10, 1933. Exchange of notes of Sept. 29, 1934, and additional protocol of Feb. 26, 1935. GATT effective Jan. 1, 1948.	Exchange of most-favoured-nation treatment including scheduled concessions. May be terminated on three months notice.
GABON.....	Franco-Canadian Trade Agreement of 1933 applied to Gabon. GATT effective Aug. 17, 1960.	Exchange of most-favoured-nation treatment.
GERMANY, FEDERAL REPUBLIC OF.	GATT effective Oct. 1, 1951.	Exchange of most-favoured-nation treatment.
GREECE.....	<i>Modus vivendi</i> by exchange of notes of July 24-28, 1947. GATT effective Mar. 1, 1950.	Exchange of most-favoured-nation treatment. May be terminated on three months notice.
GREENLAND.....	(See Denmark.)	
GUATEMALA.....	Trade Agreement signed Sept. 28, 1937; in force Jan. 14, 1939.	Exchange of most-favoured-nation treatment. May be terminated on six months notice.

**Tariff and Trade Arrangements with Non-Commonwealth Countries as at
Dec. 31, 1964—continued**

Country	Agreement	Principal Terms
GUINEA.....	Franco-Canadian Trade Agreement of 1933 applied to Guinea.	Since the creation of Guinea as an independent state in 1958, Canada has continued to grant most-favoured-nation treatment.
HAITI.....	Trade Agreement signed Apr. 23, 1937; in force Jan. 10, 1939. GATT effective Jan. 1, 1950.	Exchange of most-favoured-nation treatment.

Yugoslavia has acceded to GATT provisionally.	Exchange of most-favoured-nation treatment. May be terminated on one years notice.

PART IV.—TRAVEL BETWEEN CANADA AND OTHER COUNTRIES*

Canadians have long been enthusiastic travellers and have become very active in contributing to and benefiting from the great expansion in the world travel industry. In 1964, visits of Canadians to other countries numbered almost 32,600,000, of which 32,200,000 were to the United States. The latter was an increase of nearly 9.5 p.c. over the previous year. On the other hand, visits to Canada by residents of the United States increased by only 1.9 p.c. over 1963 but, even so, reached a record 32,500,000. It is also of interest to note the rapid increase in Canadian travel to overseas countries; in 1964, Canadian visits overseas numbered 391,650, an increase of 14.5 p.c. over 1963. The number of overseas visitors coming directly to Canada, also rising year by year, totalled 112,800.

The effect of these increases in the number of visits to and from Canada and the resulting increases in the expenditures involved is of considerable importance to persons in the travel industry and also to those concerned with Canada's balance of payments position. In 1963, for the first time in several years, the Canadian travel account showed a surplus, which amounted to \$24,000,000, largely due to increased Canada-United States travel. In 1964, however, Canadian travel expenditures outside the country, amounting to \$712,000,000, outweighed foreign travel payments to Canada (including those of United

* Prepared by the Travel Statistics Unit, National Accounts and Balance of Payments Division, Dominion Bureau of Statistics.

States visitors) by \$50,000,000. Canada has had a surplus on travel account with the United States since 1962 but the large surplus of \$161,000,000 in 1963 was reduced in 1964 to \$109,000,000. Although still sizable, this surplus was not high enough to counter-balance the deficit in the travel account with other countries; Canadian expenditures for travel to countries other than the United States totalled \$231,000,000 in 1964 compared with receipts from these countries of \$72,000,000.

Travel Between Canada and the United States.—The close ties that exist between Canada and the United States have been strengthened throughout the years by the very great interchange of people across the common border. As would be expected, most of the visits are made by automobile. In 1964, a record 26,371,000 United States travellers entered Canada by car and spent an estimated \$397,600,000, an increase of 10.2 p.c. or \$36,700,000 over the 1963 expenditure for this category. Greater numbers combined with higher average expenditures per person accounted for the increase. Length of stay of travellers is always significant since it has an important bearing on the amount of money spent. For example, 65.5 p.c. of the United States visitors to Canada in 1964 entered and left on the same day yet accounted for only 10.4 p.c. or \$61,400,000 of the total amount spent by United States travellers in Canada. The remaining 89.6 p.c., or \$528,800,000, was spent by travellers staying one or more nights although these comprised only 34.5 p.c. of the total number.

In 1964, a new survey was introduced to gather information on the increasing number of United States pleasure craft entering Canadian waters. It was estimated that 79,250 such craft visited Canada in 1964, 97 p.c. of them in the April–September period. Ontario received 81 p.c. of these entries, Quebec 10 p.c. and British Columbia about 9 p.c. Of the total, almost 61 p.c. entered and left on the same day but there were wide differences in lengths of stay as between provinces. Of those entering Ontario and Quebec, 63 p.c. and 93 p.c., respectively, left on the same day but in British Columbia 98 p.c. stayed one or more nights. The distances between Canadian and United States ports on the West Coast and those on the Great Lakes and St. Lawrence River may explain the different patterns.

Canadian travel to the United States set new records in 1964 in both numbers and expenditures. By that time the restricting influences of the 1962 dollar devaluation and the reduced customs exemption were being countered by such factors as higher incomes, more leisure time, improved transportation facilities and reduced air fares. All categories of travel—automobile, aircraft, bus, train and boat—contributed to the nearly 10-p.c. increase in visits over 1963. Expenditures of automobile travellers rose over 30 p.c. to a total of \$254,100,000, which amount represented 53.4 p.c. of the total spent by Canadian travellers in the United States (excluding Hawaii). It is interesting to note that Canadians usually spend less time in the United States per visit than United States visitors spend in Canada. In 1964, 84 p.c. of the Canadian travellers to the United States entered and left on the same day, compared with 65.5 p.c. of United States visitors to Canada. These short-term Canadian visitors spent 12.1 p.c. of the total Canadian payments to the United States, the remaining 87.9 p.c. being spent by long-term Canadian visitors who comprised only 16 p.c. of the total number.

Canadians travel to the United States for a variety of reasons but recreation accounted for an estimated 46.3 p.c. of the visits in 1964, visits to friends or relatives for 31.9 p.c., business for 10.9 p.c., shopping for 5.3 p.c. and health for 3.6 p.c. Residents of the Atlantic Provinces, who have had the longest association with the United States, account for the highest percentage (45.3) travelling to the United States to visit friends or relatives. Alberta recorded the highest percentage (28.6) of business trips and Saskatchewan the highest percentage (10.0) of shopping trips.

Travel Between Canada and Overseas Countries.—Canadian residents going overseas in 1964 numbered 391,650, almost 15 p.c. higher than in 1963; of the total, 322,650 went directly from Canada and 69,000 travelled via the United States. Gross travel expenditures in countries other than the United States totalled \$320,000,000, of which \$155,000,000 was spent for oceanic transportation; the airlines received 90 p.c. of the overseas transportation costs by Canadians returning direct to Canada.

From replies to questionnaires by Canadians going directly overseas, the following major destinations were estimated: Britain, 81,000; France, 74,000; Germany, 60,000; Switzerland, 48,000; the Netherlands, 46,000; Italy, 45,000; the West Indies, the Bahamas and Bermuda, 38,000; and Mexico, 17,000. These figures represent visits to the various countries and it is quite usual for one person to visit several countries on the same trip. Average lengths of stay were indicated as: Britain, 32 days; Continental Europe, 38-39 days; Britain and Continental Europe (combined), 41 days; Bermuda, 14 days; the West Indies, 18 days; Mexico, 19 days; and Hawaii, 20 days. Boat travellers generally have more holiday time than air travellers and their length of stay abroad is usually longer. The average length of stay for those going by boat for combined visits to Britain and Continental Europe was 70 days and that for similar trips by air averaged 37-38 days.

Because of the heavy postwar immigration to Canada, it is natural that a high proportion of persons travelling overseas should be going to visit relatives and friends. In 1964, persons travelling overseas for that reason made up between 43 and 44 p.c. of the total; the proportions going to Britain and Continental Europe for that reason were 71 p.c. and 63 p.c., respectively. Recreation was the main purpose of 79 p.c. of the visits to other Commonwealth areas (including the West Indies, the Bahamas and Bermuda). As would be expected, the greatest number of Canadians travelling to overseas countries were from

the provinces with the largest populations and the highest incomes—about 43 p.c. resided in Ontario, 27 p.c. in Quebec and 13 p.c. in British Columbia. Comparing direct and indirect travel, the greatest difference, aside from the number of persons in each category, was in the purpose of trip reported; recreation was the main purpose of 61 p.c. of the travellers going overseas via the United States and 45 p.c. of those doing direct.

Travel to Canada from overseas has also been increasing. In 1964 about 112,800 overseas visitors came to Canada and spent an estimated \$72,000,000, an increase of \$12,000,000 over the amount spent by such visitors in 1963. Visitors from Britain spent \$33,000,000 or 45.8 p.c. of the total and those from other sterling areas, \$11,000,000 or 15.3 p.c.; from other European countries, \$17,000,000 or 23.6 p.c.; and from other areas, \$11,000,000 or 15.3 p.c. During the year, 50,700 visitors arrived directly from Britain, representing 45 p.c. of the total non-immigrant entries from overseas countries; those from other Commonwealth countries numbered 8,870 or 8 p.c.; from other European countries, 37,400 or 33 p.c.; and from other areas, 15,800 or 14 p.c. Far more overseas visitors travelled by air than by ship. In 1964, 98,100 persons, or 87 p.c. of the direct entries, arrived by aircraft at Canadian international airports and 13,500 persons arrived by ship.

Based on questionnaire replies by overseas visitors to Canada in 1964, residents of Britain remained in Canada 33-34 days on the average, those from other European countries 34 days, those from other Commonwealth countries about 26 days and those from all other areas 15-16 days. During 1964, 66.5 p.c. of all travellers from overseas came to Canada to visit friends and relatives compared with 72.5 p.c. in 1963, 17.8 p.c. reported business as their main purpose compared with 15.1 p.c. in 1963, and those who came for recreational purposes made up 13.3 p.c. of the total compared with 10.7 p.c. in the previous year. Purpose of trip showed considerable variation according to area of residence. Almost 76 p.c. of the visitors from Britain came to visit friends or relatives but the proportion of arrivals from other countries for this purpose was only 42.5 p.c. The percentage of travel for business reasons ranged from close to 14 p.c. of the visitors from Britain to between 25 and 26 p.c. of those from other European countries. Recreation was reported by only 8.7 p.c. of the travellers from Britain but by more than 33 p.c. of those from other countries.

Subsection 1. DBS Statistics of Federal Government Finance.....	977		

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii of this volume.

Combined statistics of public finance for all governments in Canada—federal, provincial and municipal—are presented in Section 1 of this Chapter and Section 2 covers the incidence of taxation at the three levels. More detailed information for each level of government is given in Sections 3, 5 and 6. Section 4 gives information on the rapidly growing list of joint federal-provincial programs and on the extent of federal financial participation in such programs.

Section 1.—Combined Statistics of Public Finance for All Governments

Combined Revenue and Expenditure.—Tables 1 and 2 give details of the federal, provincial and municipal net combined revenue by source and net combined current and capital expenditure by function, respectively, for 1961 and 1962. This net basis has been prepared by deducting from revenue, and from the appropriate expenditure, certain specified amounts such as grants-in-aid and shared-cost contributions from other governments, institutional revenue, and interest, premium, discount and exchange revenue. Amounts provided for debt retirement are excluded to avoid duplication since all expenditure resulting from capital borrowings is included.

Inter-government transfers such as subsidy payments by the Federal Government to the provincial governments are unconditional grants and therefore cannot be offset against any specific expenditure. These are set out separately in Tables 1 and 2 in order to prevent duplication and to provide additive totals. Because of the differing accounting practices of governments and variations in fiscal year-ends, discrepancies appear between the amounts recorded as inter-government transfers in the two tables.

* Except as otherwise indicated, revised in the Public Finance and Transportation Division, Dominion Bureau of Statistics.

¹ Includes treasury bills having a term of two or more years.² Includes treasury bills having a term of less than two years.³ Included in "Other direct liabilities".⁴ Excludes contingent liability in respect of Federal Government guarantee of deposits maintained by chartered banks in the Bank of Canada and miscellaneous guarantees, the amounts of which were not finally determined or were indeterminate at the close of the fiscal year.

Section 2.—Taxation in Canada*

Canada is a federal state with a central government and ten provincial governments. In 1867 the principal colonies of the British Crown in North America joined together to form the nucleus of a new nation and the British North America Act of that year became its written constitution. This statute created a central government with certain powers while continuing the existence of political subdivisions called provinces with powers of their own.

Under the British North America Act the Parliament of Canada has the right to raise "money by any mode or system of taxation" while the provincial legislatures are restricted to "direct taxation within the province in order to the raising of a revenue for provincial purposes". Thus the provinces have a right to share only in the field of direct taxation while the Federal Government is not restricted in any way in matters of taxation. The British North America Act also empowers the provincial legislatures to make laws regarding "municipal institutions in the province". This means that the municipalities derive their incorporation with its associated powers, fiscal and otherwise, from the provincial government concerned. Thus, from a practical standpoint, municipalities are also limited to direct taxation.

A direct tax is generally recognized as one "which is demanded from the very person who it is intended or desired should pay it". In essence, this conception has limited the provincial governments to the imposition of income tax, retail sales tax, succession duties and an assortment of other direct levies. In turn, municipalities, acting under the guidance of provincial legislation, tax real estate, water consumption and places of business. The Federal Government levies direct taxes on income, on gifts and on the estates of deceased persons, and indirect taxes such as excise taxes, excise and customs duties, and a sales tax.

The increasing use by both the federal and the provincial governments of their rights in the field of direct taxation in the 1930's resulted in uneconomic duplication and some severe tax levies. Starting in 1941, a series of tax agreements were concluded between the federal and the provincial governments to promote the orderly imposition of direct taxes. The duration of each agreement was normally five years. Under the earlier agreements, the participating provinces undertook, in return for compensation, not to use or permit their municipalities to use certain of the direct taxes. Under the present arrangements, the federal income tax otherwise payable in all provinces and the estate tax otherwise payable in three provinces are abated by certain percentages to make room for provincial levies.

The current arrangement became operative on Apr. 1, 1962 and will run until Mar. 31, 1967. Under this arrangement there is a partial federal withdrawal from the field of direct taxation and a re-entry of all provinces into the vacated area. The federal personal income tax otherwise payable on income earned in a province and on income received by a resident of a province is reduced by the following percentages: 16 p.c. in 1962; 17 p.c. in 1963; 18 p.c. in 1964; 21 p.c. in 1965;† and 24 p.c. in 1966.† In 1965 and 1966, the federal tax abatements for income earned in Quebec or received by a resident of Quebec will be 44 p.c. and 47 p.c., respectively. The additional relief in the case of Quebec is to allow that province to collect revenue to pay for certain programs that are paid for in whole or in part by the Federal Government in other provinces. The Federal Government also reduces its rate of corporation income tax on taxable income of corporations earned in the provinces. The reduction is 9 p.c. of taxable income earned in any province except Quebec and 10 p.c. in Quebec; the additional 1 p.c. reduction in Quebec is to compensate for the additional tax levied by the province on corporation income to provide grants to universities. These provincial grants replace federal grants which in other provinces are paid to the universities by the Federal Government through the Canadian Universities

* Revised (August 1965) in the Taxation Division, Department of Finance, under the direction of F. R. Irwin, Director of the Division, and by the provincial authorities concerned.

† The original agreement provided for abatements of 19 p.c. in 1965 and 20 p.c. in 1966. However, following a federal-provincial conference in April 1964, the provinces were granted an additional two percentage points in 1965 and four percentage points in 1966.

Foundation. Finally, the Federal Government abates the federal estate tax otherwise payable by 75 p.c. in respect of property situated in a province which levies its own death tax. Only Ontario, Quebec and British Columbia at present levy death taxes in the form of succession duties.*

These reductions in federal income tax and estate tax under the terms of the 1962-67 fiscal arrangements do not apply to the Yukon Territory or the Northwest Territories or to income earned outside Canada. The Yukon and Northwest Territories do not impose income taxes or death taxes.

The provincial tax rates are not restricted to the extent of the federal withdrawal. The constitutional position of the provinces permits them unlimited use of direct taxes for the raising of revenue for provincial purposes. However, in all but four provinces (Ontario, Quebec, Manitoba and Saskatchewan) the provincial rates of income tax coincide with the amount of the federal abatement.

As part of the 1962-67 fiscal arrangements, the Federal Government has entered into tax collection agreements under which it collects the provincial personal income taxes for all provinces except Quebec and the provincial corporation income taxes for all provinces except Ontario and Quebec.

Subsection 1.—Federal Taxes

Individual Income Tax

Every individual who is resident in Canada at any time during a year is liable for the payment of income tax for that year. Every non-resident individual who is employed or carries on business in Canada during a year is required to pay tax on the part of his income earned in Canada. The term "residence" is difficult to define simply but, generally speaking, it is taken to be the place where a person resides or where he maintains a dwelling ready at all times for his use. There are also extensions of the meaning of Canadian resident to include a person who has sojourned in Canada for an aggregate period of 183 days in a taxation year, or a person who was during the year a member of the Armed Forces of Canada, or an ambassador, a high commissioner, or an officer or servant of Canada or of any one of its provinces, or the spouse or dependent child of any such person. Canadian taxation practice is based to a large extent on the British experience. This is reflected particularly in the fact that taxation is on the basis of residence rather than citizenship, and in the freedom from tax on capital gains.

The Canadian tax law uses the concepts "income" and "taxable income". The income of a resident of Canada for a taxation year comprises his revenues from all sources inside or outside Canada and includes income for the year from all businesses, property, offices and employments. It does not include capital gains unless they arise out of the conduct of a business or as a result of an adventure in the nature of trade.

In computing his income for a taxation year, an individual must include all dividends, fees, annuities, pension benefits, allowances, interest, alimony, maintenance payments and other miscellaneous sources of income. On the other hand, war service disability pensions paid by Canada or an ally of Her Majesty at the time of the war service, unemployment insurance benefits, compensation in respect of an injury or death paid under a Workmen's Compensation Act of a province and family allowances do not have to be included in the computation of income.

In computing his income, an individual who is carrying on business may deduct business expenses including depreciation (called capital cost allowances), interest on borrowed money, reserves for doubtful debts, contributions to pension plans or deferred profit-sharing

* The original agreement was for a 50-p.c. abatement. However, at the conclusion of a federal-provincial conference in late 1963, it was increased to 75 p.c. in respect of deaths occurring after Mar. 31, 1964. Currently, only the estates of domiciliaries of British Columbia qualify for the full 75 p.c. abatement. Quebec and Ontario estates are temporarily eligible for only 50 p.c. because these two provinces have decided for the time being to take a payment from the Federal Government on account of the additional 25-p.c. abatement rather than to increase their succession duty rates.

plans for his employees, bad debts, and expenses incurred for scientific research. In general, no deductions are allowed in computing income from salary and wages, although there are exceptions such as travelling expenses of employees who have to travel as they perform their work, union dues, alimony payments and contributions to registered pension plans. Individuals may deduct, within limits, amounts set aside to provide a future income under registered retirement savings plans. Students attending universities, colleges, high schools, public schools or certain other certified educational institutions in Canada may deduct their tuition fees if they exceed \$25 per annum. Students in full-time attendance at universities outside Canada may deduct their tuition fees.

Having computed his income, the individual then calculates his taxable income by deducting certain exemptions and deductions. These exemptions and deductions are as follows: for single status, \$1,000; for married status \$2,000; for dependent children eligible to receive family allowance,* \$300 per child; for other dependants (as defined in the law), \$550 per dependant; where the taxpayer is over 65 years of age, an additional \$500;† where the taxpayer is blind or confined for the whole of the taxation year to a bed or a wheelchair, an additional \$500; charitable donations, up to 10 p.c. of income; and medical expenses, in excess of 3 p.c. of income. In lieu of claiming deductions for charitable donations and medical expenses an individual may claim a standard deduction of \$100.

As already stated, an individual who is resident in Canada for the whole year is taxed on his income from both inside and outside Canada. An individual who is not resident in Canada at any time during the year but who carries on business in Canada or who earns salary or wages in Canada is taxed only on the income earned in Canada. In computing taxable income earned in Canada, such a non-resident individual is allowed to deduct that part of the exemptions and deductions that may reasonably be attributed to the income earned in Canada. (A non-resident who derives investment income from Canada is taxed in a different way described on p. 969.) An individual who ceases to be a resident of Canada during the year or who becomes a resident during the year so that he is resident for only part of the year will be subject to income tax in Canada on only that part of his income for the year received while he is resident in Canada. In these circumstances, the deductions from income permitted for determining taxable income will be the amount that may reasonably be considered as applicable to the period during which he is resident in Canada.

A progressive schedule of rates is applied to taxable income, beginning at 11 p.c. on the first \$1,000 of taxable income and increasing to 80 p.c. on taxable income in excess of \$400,000. In addition, an old age security tax is levied on taxable income at the rate of 4 p.c. with a maximum of \$120 reached at the level of \$3,000.

After calculating income tax using this progressive schedule of rates, an individual is allowed a deduction from his tax under four main headings. (1) *Dividend Tax Credit*—to partially eliminate the double taxation of corporate profits and to encourage participation in the ownership of Canadian companies, Canadian resident individuals are allowed to deduct from their tax an amount equal to 20 p.c. of the net dividends they receive from Canadian taxable companies. (2) *Foreign Tax Credit*—foreign taxes paid on income from foreign sources may be credited against Canadian income tax but the credit may not exceed the proportion of Canadian tax relative to such income. (3) *Abatement under Federal-Provincial Fiscal Arrangements*—in 1965 the federal personal income tax otherwise payable on income of a resident of a province and on income earned in a province is reduced by 21 p.c.; this abatement will increase to 24 p.c. in 1966.‡ (4) *General Tax Reduction*—in 1965 all individuals may deduct from their tax an amount equal to the lesser

* Family allowances are monthly welfare payments by the Federal Government to the parents or guardians of children under 16 years of age. The allowance is \$6 for each child under 10 years of age and \$8 for each child between the ages of 10 and 16. These allowances are not subject to income tax. Payments are also made in respect of children between the ages of 16 and 18 in full-time attendance at educational institutions; such payments of \$10 a month are called youth allowances. The right to deduct \$550 for a dependent child is not affected by the receipt of these youth allowances.

† For 1966 and subsequent taxation years this special deduction will not be granted to taxpayers under 70 years of age who receive an old age security pension.

‡ Except in the case of income earned in Quebec or received by a resident of Quebec where it is 44 p.c. in 1965 and will be 47 p.c. in 1966 (see p. 964).

of 5 p.c. of their basic tax or \$300. In 1966 and subsequent taxation years this deduction will be the lesser of 10 p.c. of basic tax or \$600. "Basic tax" is personal income tax, excluding the old age security tax, after deduction of the dividend tax credit but before the abatement under the Federal-Provincial Fiscal Arrangements.

To a very large extent, individual income tax is payable as the income is earned. Taxpayers in receipt of salary or wages have tax deducted from their pay by their employer and in this way pay nearly 100 p.c. of their tax liability during the calendar year. The balance of the tax, if any, is payable at the time of filing the tax return before Apr. 30 in the following year. Persons with more than 25 p.c. of their income from sources other than salary or wages must pay tax by quarterly instalments throughout the year and returns must be filed before Apr. 30 in the following calendar year.

The following statement shows what taxpayers pay at various levels of income. In calculating these taxes it has been assumed that all taxpayers take the standard deduction of \$100 and no allowance has been made for the 20-p.c. dividend tax credit.

<u>Status</u>	<u>Income</u>	<u>Income Tax</u>	<u>Old Age Security Tax</u>
	\$	\$	\$
Single taxpayer—no dependants.....	1,200	10	4

	10,000	1,319	120
	20,000	4,850	120
	50,000	19,785	120
	100,000	49,515	120

The income taxes shown above are the combined federal and provincial taxes in all provinces where the provincial tax is the same as the federal abatement (i.e., in all provinces except Quebec, Manitoba and Saskatchewan). In Quebec the provincial tax approximates the federal abatement; in Manitoba the provincial tax exceeds the abatement by 5 percentage points and in Saskatchewan by 6 percentage points.

Exemption from Tax.—The income from a new manufacturing or processing business established in certain designated areas of slower growth by an individual or corporation during the period commencing on Dec. 5, 1963 and terminating on Mar. 31, 1967 is eligible for a three-year exemption from income tax.

Corporation Income Tax

The Income Tax Act levies a tax upon the income from everywhere in the world of corporations resident in Canada and upon the income attributable to operations in Canada of non-resident corporations carrying on business in Canada. In computing their income, corporations may deduct operating expenses including municipal real estate taxes, reserves for doubtful debts, bad debts, and interest on borrowed money. They may not deduct provincial income taxes other than provincial taxes on income derived from mining operations. (For this purpose "income from mining operations" is specially defined.)

Regulations covering capital cost allowances (depreciation) permit taxpayers to deduct over a period of years the actual cost of all depreciable property. The yearly deductions of normal capital cost allowances are computed on the diminishing balance principle. (Taxpayers engaged in farming and fishing may choose between this and the straight-line method.) Published regulations establish a number of classes of property and maximum rates. There is provision for recapture of any amount allowed in excess of the ultimate net capital cost of any asset.

Accelerated depreciation is available to taxpayers in certain circumstances and for a limited period of time. Straight-line depreciation at a rate not exceeding 50 p.c. is granted in respect of new machinery and equipment that would otherwise fall in Class 8 of the Income Tax Regulations acquired in the period June 14, 1963 to Dec. 31, 1966 for use in manufacturing or processing businesses by individuals resident in Canada or by companies resident in Canada that have a degree of Canadian ownership. A company that has a degree of Canadian ownership is one which throughout the 60-day period immediately preceding the year in question complies with the following conditions: (1) it was resident in Canada; (2) not less than 25 p.c. of its directors were residents of Canada; and (3) either (a) not less than 25 p.c. of its shares having full voting rights and shares representing not less than 25 p.c. of its equity share capital were owned by individuals resident in Canada or corporations controlled in Canada, or (b) a class or classes of its shares having full voting rights were listed on a Canadian stock exchange and no one non-resident person and no one corporation that did not comply with (a) above owned more than 75 p.c. of the shares having full voting rights, and equity shares of the corporation representing not less than 50 p.c. of the paid-up capital of the corporation were listed on a Canadian stock exchange and no one non-resident person or no one corporation that did not comply with (a) above owned equity shares representing more than 75 p.c. of its equity share capital. For new manufacturing or processing businesses in designated areas of slower growth there is no requirement that they have a degree of Canadian ownership to qualify for this 50-p.c. straight-line depreciation. Moreover, the period during which their expenditures on eligible assets qualify for this accelerated write-off extends from Dec. 5, 1963 to Mar. 31, 1967. Depreciation at the accelerated rate of 20 p.c. on a straight-line basis is also available in respect of new buildings acquired in designated areas of slower growth in the period commencing on Dec. 5, 1963 and ending on Mar. 31, 1967. Finally, accelerated depreciation is allowed in respect of new buildings or other structures for grain storage acquired in the period May 1, 1965 to Dec. 31, 1966 (full write-off in four years) and in respect of property acquired in the period Apr. 27, 1965 to Dec. 31, 1966 to prevent water pollution (full write-off in two years).

Expenditures on scientific research by corporations qualify for special tax treatment. Generally speaking, all expenditures on scientific research related to the business of the taxpayer may be written off for tax purposes in the year when incurred. In addition, corporations are permitted to deduct, in computing income for tax purposes, 150 p.c. of their increased expenditures on scientific research in Canada. This concession is available until the end of the 1966 taxation year.

Taxpayers operating mines, oil wells and gas wells are allowed a depletion allowance, usually computed as a percentage of profits derived from mineral, oil or gas production, which continues as long as the mine or well is in operation. This allowance is in addition to capital cost allowances on buildings, machinery and similar depreciable assets used by the taxpayer and the deduction of his exploration and drilling expenses. Taxpayers operating timber limits receive an annual allowance sometimes called a depletion allowance. This is a rateable proportion of the amount invested in the limit and is based on the amount of timber cut in the year. When the amount invested in the limit has been recovered, no further allowance is given.

In computing taxable income, corporations may deduct dividends received from other Canadian taxpaying corporations and also from foreign corporations in which the Canadian corporation has at least 25 p.c. stock ownership. Business losses may be carried back one

year or forward five years and deducted in computing taxable income. Corporations may also deduct donations to charitable organizations up to a maximum of 10 p.c. of their income.

The general rates of tax on corporate taxable income are 18 p.c. on the first \$35,000 of taxable income and 47 p.c. on taxable income in excess of \$35,000. Corporations deriving more than one half of their gross revenue from the sale of electric energy, gas or steam pay tax on their taxable income from such sources at the rate of 18 p.c. on the first \$35,000 of taxable income plus 45 p.c. on taxable income in excess of \$35,000. Corporations that qualify as investment companies pay a tax of 18 p.c. on their taxable income. In addition to these rates, all corporations pay an old age security tax of 3 p.c. of taxable income, bringing their rates up to 21 p.c. and 50 p.c. (21 p.c. and 48 p.c. for the public utility companies and 21 p.c. for investment companies).

In calculating the amount of their income tax, corporations are allowed a deduction from tax under three headings. (1) *Foreign Tax Credit*—foreign taxes paid on income from foreign sources may be credited against Canadian income tax but the credit may not exceed the proportion of Canadian tax relative to such income. (2) *Abatement under Federal-Provincial Fiscal Arrangements*—corporations may deduct from their federal tax otherwise payable a tax abatement equal to a fixed percentage of their taxable income attributable to operations in a Canadian province. This abatement is to make room for the provincial income tax levied by each Canadian province. The amount of the abatement is 9 p.c. of taxable income attributable to operations in any province except Quebec and 10 p.c. of taxable income attributable to operations in Quebec. (3) *Provincial Logging Tax*—corporations may deduct from their federal tax otherwise payable an amount equal to two thirds of a provincial tax on income from logging operations not exceeding two thirds of 10 p.c. of the corporation's income from logging operations in the province. (At present only Ontario, Quebec and British Columbia impose logging taxes—see p. 976.)

Income from manufacturing and processing businesses established in certain designated areas of slower growth during the period commencing Dec. 5, 1963 and terminating Mar. 31, 1967 is eligible for a three-year exemption from income tax.

Corporations are required to pay their tax (combined income and old age security tax) in monthly instalments but the period during which they pay tax for a taxation year does not coincide with that taxation year. Until 1963, corporations started to pay tax for a taxation year in the seventh month of that year. In each of the last six months of their taxation year and in the following three, they paid one twelfth of their estimated tax for the year and in each of the following two months they paid one third of the estimated balance. In the sixth month following the end of their taxation year, the final return had to be filed and the remainder of the tax paid for the year. In 1963, a new set of rules was introduced for the payment of corporation income tax, which will become fully operative in early 1966. These rules require that corporations begin to pay their tax for a taxation year in the fifth month of that year. In each of the last eight months of their taxation year and in the following two, they pay one twelfth of their estimated tax for the year and in each of the following two months, they pay one half of the estimated balance. In the sixth month following the end of their taxation year, the final return must be filed.

Taxation of Non-residents

A non-resident is liable for payment of income tax if he was employed or was carrying on business in Canada during a taxation year. The expression "carrying on business in Canada" includes (1) maintaining a permanent establishment in Canada, (2) processing goods even partially in Canada, and (3) entering into contracts in Canada. The taxable income of a non-resident individual thus derived is taxed under the same schedule of rates as Canadian resident individuals, and non-resident corporations deriving income from carrying on business in Canada are taxed on their taxable income attributable to operations in Canada at the same rates as Canadian resident corporations. (Tax treaties with some countries provide certain exemptions from tax for remuneration for services performed in Canada by residents or employees of these countries.)

Furthermore, a tax of 15 p.c. is applied on certain forms of income going from Canada to non-resident individuals or corporations, such as interest, dividends, rentals, royalties, income from a trust or estate and alimony. The standard rate of 15 p.c. is reduced to 10 p.c. in the case of dividends paid by a company that has a degree of Canadian ownership (see p. 968), and the rate on royalties from motion picture films is also 10 p.c.

The non-resident tax is withheld at the source by the Canadian payer. It is an impersonal tax levied without regard to the status or other income of the non-resident recipient. Non-residents who receive only this kind of income from Canada do not file returns in Canada.

Profits earned in Canada by a non-resident corporation carrying on business through a branch or permanent establishment in Canada are taxed at the regular rates of corporation income tax and are also subject to an additional tax of 15 p.c. This additional tax is imposed on profits attributable to the branch after deducting therefrom Canadian federal and provincial income taxes and an allowance in respect of the net increase in capital investment in property in Canada.

Gift Tax

The Income Tax Act levies a tax upon gifts. The rates range from 10 p.c. on an aggregate taxable value of \$5,000 or under to 28 p.c. on an aggregate taxable value of over \$1,000,000. Exemptions include complete exemption of gifts of \$1,000 or less per donee and a general deduction of \$4,000 from aggregate taxable value of gifts made in the year.

Estate Tax

This tax applies to property passing, or deemed to pass, at death. All the property of persons who were domiciled in Canada before their death must be taken into consideration no matter where that property is situated; for persons dying domiciled outside of Canada only their property situated in Canada is subject to tax.

In computing the tax of a Canadian domiciliary, the value of the whole estate is first determined. Once the aggregate value of the estate has been determined, estate debts and certain expenses may be deducted. From the resulting "aggregate net value" there may be deducted the amount of a basic exemption, which is increased where the deceased leaves a widow or dependent child, and also the amount of any charitable bequests to charitable organizations in Canada. After these deductions the amount left is the "aggregate taxable value" to which is applied the tax rates. From the tax so calculated may be deducted (1) a tax abatement in respect of property situated in a province that levies a succession duty, (2) a credit for gift tax paid on gifts made within three years of death (the value of which must be included in the aggregate net value of the estate), and (3) a credit for foreign taxes.

No estate valued at less than \$50,000 is subject to estate tax. This \$50,000 is not an exemption but the starting point for tax. The estate tax must not reduce the value of an estate after tax to less than \$50,000. The basic deductible exemption which applies to all estates of Canadian domiciliaries is \$40,000. This basic exemption of \$40,000 is increased to \$60,000 in respect of a deceased male survived by a spouse, or in respect of a deceased female survived by an incapacitated spouse and a dependent child. In both cases, there is an additional exemption of \$10,000 for each surviving dependent child (i.e., under 21). Finally, the basic exemption of \$40,000 is increased by \$15,000 for every surviving dependent child made an orphan by the death of the deceased.

The tax on the estates of Canadian domiciliaries is calculated by applying a graduated scale of rates. For an aggregate taxable value of \$5,000, or less, the rate is 10 p.c. For an aggregate taxable value of \$100,000, the tax is \$19,000 and anything between \$100,000 and \$150,000 is taxed at 21 p.c. At \$2,000,000 of taxable value, the tax is \$816,500 and the excess over \$2,000,000 is chargeable at the highest rate of 54 p.c.

As stated previously, there is an abatement from federal estate taxes otherwise payable, in respect of provincial succession duties. Generally, the abatement is a deduction of 75 p.c. from the federal tax otherwise payable in respect of property situated in a province that levies succession duties.*

The property situated in Canada of a deceased person not domiciled in Canada is subject to estate tax at a flat rate of 15 p.c. No deduction is allowed against the assessed value of such property except for debts specifically chargeable to it. However, there is a special provision that exempts all such property of less than \$5,000 value and also provides that the tax must not reduce the value of the property to less than \$5,000. (The Estate Tax Convention between Canada and the United States increases this figure to \$15,000.) Where property is subject to provincial duties, the 15-p.c. tax is abated by 75 p.c. (At present this abatement is only 50 p.c. in Ontario and Quebec.)

Excise Taxes

The Excise Tax Act levies a general sales tax and special excise taxes. Both the sales tax and the special excise taxes are levied on goods imported into Canada and on goods produced in Canada. They are not levied on goods exported. The sales tax, which is at the rate of 8 p.c., is levied on the manufacturer's sale price of goods produced or manufactured in Canada or on the duty-paid value of goods imported into Canada. For alcoholic beverages and tobacco products, the sale price for purposes of the sales tax includes excise duties levied under the Excise Act (see p. 972). An old age security tax of 3 p.c. is levied on the same basis as the 8-p.c. tax, bringing the total sales tax to 11 p.c.

Many classes of goods are exempt from sales tax. Foodstuffs, electricity and fuels for lighting or heating are generally exempt as well as articles and materials used by public hospitals. The products of farms, forests, mines and fisheries are, to a large extent, exempt as well as most equipment used in farming and fishing. Also, a variety of items are exempt from sales tax when purchased by municipalities. These and other exemptions are set forth in schedules to the Excise Tax Act.

A number of articles are subject to special excise taxes. Where these are ad valorem taxes they are levied on exactly the same price or duty-paid value as the general sales tax. Those levied at present are as follows:—

Cigarettes.....	2½ cents per 5 cigs.
Cigars.....	15 p.c. ad valorem
Jewellery, including clocks, watches, articles of ivory, amber, shell, precious or semi-precious stones, goldsmiths' and silversmiths' products except gold-plated or silver-plated ware for the preparation or serving of food or drink....	10 p.c. ad valorem
Lighters.....	the greater of 10 cents per lighter or 10 p.c. ad valorem
Playing cards.....	20 cents per pack
Radios.....	the greater of \$2 per radio or 15 p.c. ad valorem
Phonographs and television sets.....	15 p.c. ad valorem
Tubes for radios, phonographs and television sets, not including television picture tubes, priced under \$5 per tube.....	the greater of 10 cents per tube or 15 p.c. ad valorem
Television set picture tubes.....	15 p.c. ad valorem
Slot machines—coin, disc or token-operated games or amusement devices.....	10 p.c. ad valorem
Matches.....	10 p.c. ad valorem
Tobacco—pipe tobacco, cut tobacco and snuff.....	80 cents per lb.
Tobacco pipes, cigar and cigarette holders and cigarette rolling devices.....	10 p.c. ad valorem
Toilet articles, including cosmetics, perfumes, shaving creams, antiseptics, etc....	10 p.c. ad valorem

* See footnote †, p. 966.

Wines—*	
Wines of all kinds containing not more than 7 p.c. absolute alcohol by volume	25 cents per gal.
Non-sparkling wines containing more than 7 p.c. absolute alcohol by volume but not more than 40 p.c. proof spirit.....	50 cents per gal.
Sparkling wines.....	\$2.50 per gal.
Insurance premiums paid to British or foreign companies not authorized to transact business in Canada or to non-resident agents of authorized British or foreign companies.....	10 p.c. of net premium for property, surety, fidelity and liability insurance. (Most other kinds of insurance are exempt.)

All the foregoing items, except the last, are also subject to the general sales tax of 8 p.c. and the old age security tax of 3 p.c. Cigarettes, cigars and tobacco are subject to further taxes, referred to as excise duties (see below).

Excise Duties

The Excise Act levies taxes (referred to as excise duties) upon alcohol, alcoholic beverages and tobacco products produced in Canada. The customs tariff on such products imported into Canada includes a levy to correspond with the duties levied on domestic production. These duties are not levied on goods exported.

Spirits.—The duties are on a per-gallon basis in proportion to the strength of proof of the spirits. These duties do not apply to denatured alcohol intended for use in the arts and in industry, or for fuel, light or power, or for any mechanical purpose. The various duties are as follows:—

On every gallon of the strength of proof distilled in Canada.....	\$13.00
On every gallon of the strength of proof used in the manufacture of—	
Medicines, extracts, pharmaceutical preparations, etc.....	\$1.50 per gal.
Approved chemical compositions.....	15 cents per gal.
Spirits sold to a druggist and used in the preparation of prescriptions.....	\$1.50 per gal.
Imported spirits when taken into a bonded manufactory in addition to other duties.....	30 cents per gal.

Canadian Brandy.—Canadian brandy, a spirit distilled exclusively from juices of native fruits without the addition of sweetening materials, is subject to a duty of \$11 per gal.

Beer.—All beer or other malt liquor is subject to a duty of 38 cents per gal.

Tobacco, Cigars and Cigarettes.—The excise duties make up nearly as large a part of the total tax on tobacco products as the special excise taxes already described. The rates are as follows:—

On manufactured tobacco of all descriptions, except cigarettes.....	35 cents per lb.
Cigarettes weighing not more than 3 lb. per thousand (nearly all of the cigarettes used in Canada are of this type).....	\$4.00 per thousand
Cigarettes weighing more than 3 lb. per thousand.....	\$5.00 per thousand
Cigars.....	\$2.00 per thousand
Canadian raw leaf tobacco when sold for consumption.....	10 cents per lb.

Combined Effect of Excise Taxes and Excise Duties on Tobacco Products

Bringing together the taxes imposed on tobacco products under the Excise Tax Act and the duties imposed under the Excise Act gives the following total taxes:—

Cigarettes.....	\$9.00 per thousand (or 18 cents per pack of 20 cigarettes) plus the 11-p.c. sales tax on the manufacturer's sale price
Manufactured tobacco.....	\$1.15 per lb. plus the 11-p.c. sales tax on the manufacturer's sale price
Cigars.....	\$2.00 per thousand plus the 15-p.c. special excise tax and the 11-p.c. sales tax on the manufacturer's sale price.

* Applicable only to wines manufactured in Canada. The customs tariff on wines includes a levy to correspond with these taxes on domestic production.

Customs Duties*

Most goods imported into Canada are subject to customs duties at various rates as provided by tariff schedules. Customs duties, which once were the chief source of revenue for the country, have declined in importance as a source of revenue to the point where they now provide less than 10 p.c. of the total. Quite apart from its revenue aspects, however, the tariff still occupies an important place as an instrument of economic policy.

The Canadian Tariff consists mainly of three sets of rates, namely, British Preferential, Most-Favoured-Nation and General. The British Preferential rates are, with some exceptions, the lowest rates. They are applied to imported dutiable commodities shipped directly to Canada from countries within the Commonwealth. Special rates lower than the ordinary preferential duty are applied on certain goods imported from designated Commonwealth countries.

The Most-Favoured-Nation rates apply to goods from countries that have been accorded tariff treatment more favourable than the General Tariff but which are not entitled to the British Preferential rate. Canada has Most-Favoured-Nation arrangements with almost every country outside the Commonwealth. The most important agreement providing for the exchange of Most-Favoured-Nation treatment is the General Agreement on Tariffs and Trade.

The General Tariff applies to imports from countries not entitled to either the Preferential or Most-Favoured-Nation treatment. Few countries are in this category and in terms of trade coverage are negligible.

In all cases where the tariff applies there are provisions for drawbacks of duty on imports of materials used in the manufacture of products later exported. The purpose of these drawbacks is to assist Canadian manufacturers to compete with foreign manufacturers of similar goods. There is a second class of drawbacks known as "home consumption" drawbacks. These apply to imported materials used in the production of specified classes of goods manufactured for home consumption.

The tariff schedules are too lengthy and complicated to be summarized here but the rates that apply on any particular item may be obtained from the Department of National Revenue, which is responsible for administering the Customs Tariff.

Subsection 2.—Provincial Taxes

All of Canada's ten provinces impose a wide variety of taxes to raise the revenue necessary for provincial purposes. All provinces levy a tax on the income of individuals and corporations resident within their boundaries or deriving income from activities or operations carried out therein. Only the Provinces of Ontario and Quebec impose special taxes on corporations in addition to income tax and only the Provinces of Ontario, Quebec and British Columbia impose a tax on property passing at death. Under the terms of the existing federal-provincial fiscal arrangement, the Federal Government makes "equalization payments" to some provinces in recognition of the fact that the actual tax revenue from the fields of income tax, death duties and natural resource revenue in those provinces, measured on a per capita basis, is lower than the average per capita yield from these taxes in the two provinces where they produce the highest yield. For some provinces these payments constitute a very important source of revenue.

Some of the more important provincial levies are reviewed briefly on the following pages.

* See also pp. 947-955.

Individual Income Tax

All provinces levy a tax on the income of individuals who reside within their boundaries or who earn income therein. In nine of the ten provinces, these taxes are computed as a percentage of federal "basic tax". As previously explained, "basic tax" is federal income tax (excluding old age security tax) otherwise payable at full federal rates before the abatement under the Federal-Provincial Fiscal Arrangements and before allowance for the federal tax reduction passed in 1965. These provincial taxes are collected by the Federal Government on behalf of these provinces. In Quebec, provincial income tax is levied at graduated rates that progress from 4.8 p.c. on the first \$1,000 of taxable income to a maximum of 35.2 p.c. on the excess over \$400,000. The determination of taxable income for Quebec tax is based on exemptions and deductions similar to those for federal tax. The Province of Quebec collects its own tax.

The percentages that provincial income tax liability is of federal "basic tax" for 1965 are: Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick, Ontario, Alberta and British Columbia each 21 p.c., Quebec approximately 44 p.c., Manitoba 26 p.c. and Saskatchewan 27 p.c.

Corporate Income Tax

All provinces levy a tax on the profits of corporations derived from activities carried out within their boundaries. In all provinces except Ontario and Quebec the provincial tax imposed on taxable income in the province is determined on the same basis as for federal income tax. In Ontario and Quebec the determination of taxable profits for purposes of provincial tax follows closely the federal rules. The rate of tax in Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick, Alberta and British Columbia is 9 p.c. of corporate taxable income. The rate that applies in Manitoba and Saskatchewan is 10 p.c., in Ontario 11 p.c. and in Quebec 12 p.c.

Four of the ten provinces levy corporate income taxes at rates in excess of the abatement allowed by the Federal Government. This abatement is equal to 9 p.c. of corporate profits except in Quebec where it is 10 p.c. (see p. 969). All provinces except Ontario and Quebec have signed agreements for the collection of their income taxes by the Federal Government.

Taxes on Alcoholic Beverages and Tobacco

Generally speaking, the sale of spirits in all provinces is made through provincial agencies operating as boards or commissions which exercise monopolistic control over alcoholic beverages. The provincial mark-up over the manufacturer's price is the effective means of revenue. Beer and wine may be sold by retailers or government stores depending on the province but in all cases they contribute to provincial revenues.* The Province of Prince Edward Island imposes a tax of 10 p.c. on all beer, wine and spirits sold at retail, collected under authority of the Health Tax Act.

Newfoundland imposes a tax on tobacco sold at retail of one quarter of one cent per cigarette purchased; from one to five cents per cigar, depending on price; and one cent per half ounce or less of other tobacco. Prince Edward Island's tax on tobacco sold at retail is one fifth of one cent per cigarette purchased; from one to three cents per cigar, depending on price; and 10 p.c. of the retail price of all other tobacco purchased. Saskatchewan's tax on retail tobacco sales is one fifth of one cent per cigarette purchased; from one to five cents per cigar, depending on price; and one cent on every half ounce of other tobacco;

* The provincial mark-up over the manufacturer's price is not considered a "tax" in DBS financial statistics, but forms part of the "profits of government business enterprises".

the average rate of the tobacco tax is 10 p.c. Specific sales taxes on tobacco products are also levied in New Brunswick, Quebec and Manitoba, and Ontario has enacted a tax on tobacco products to come into effect upon proclamation and simultaneously to replace retail sales tax on such items.

Retail Sales Taxes

Retail sales taxes are levied on the final purchaser or user and are collected by the retailer. Eight provinces now levy this type of tax at rates varying from 3 p.c. to 6 p.c. These provinces are Newfoundland, Prince Edward Island, Nova Scotia, New Brunswick, Quebec, Ontario, Saskatchewan and British Columbia. These direct levies apply to tangible taxable commodities sold for consumption in the province and to a few selected services, for example, to local telephone services in all provinces and to telecommunications and hotel and motel charges in Quebec.

Amusement Taxes

Each of the provinces with the exception of Alberta, Saskatchewan, British Columbia and Quebec has a tax on admission to places of entertainment. In addition, there is generally a licence fee imposed on the operator or owner of these amusement places. The tax on admissions is within the range of 5 p.c. to 15 p.c.

Gasoline and Diesel Fuel Oil Taxes

Each of the ten provinces imposes a tax on the purchase of gasoline by motorists and truckers. The rates vary from 12 cents per gallon in Alberta to 19 cents in Nova Scotia and Newfoundland. The amount of tax borne by one gallon of motor vehicle fuel in each province is as follows:—

<i>Gasoline</i>	<i>Diesel Fuel</i>		<i>Gasoline</i>	<i>Diesel Fuel</i>
cts.	cts.		cts.	cts.
Newfoundland.....	19		Ontario†.....	15
Prince Edward Island*	18		Manitoba.....	17
Nova Scotia.....	19		Saskatchewan.....	14
New Brunswick.....	18		Alberta.....	12
Quebec.....	16		British Columbia.....	13
				15

Motor Vehicle Licences and Fees

Each province levies a fee on the annual registration of motor vehicles, which is compulsory. Upon registration a vehicle is issued with licence plates. The rates of fee vary from province to province and, in the case of passenger cars, may be assessed on the weight of the vehicle, the wheel base, the year of manufacture, the number of cylinders of the engine, or at a flat rate. The fees for commercial motor vehicles and trailers are based on the gross weight for which the vehicle is registered, i.e., the weight of the vehicle empty plus the load it is permitted to carry. Every operator or driver of a motor vehicle is required to obtain a driver's licence and pay a fee therefor. The licences are valid for periods of from one to five years and the fees vary from \$1.00 to \$2.50 a year.

* Gasoline and diesel fuel used by primary producers—farmers, fishermen, manufacturers and processors—is exempt from tax as is also gasoline and motor fuel used by owners/or operators of registered pleasure craft.

† Some relief from taxation is given where gasoline or fuel oil is used for farming, manufacturing, commercial fishing and other off-highway purposes.

‡ Generally, fuel oil used for agricultural and industrial purposes is exempt from tax.

Taxes on Mining Operations

All provinces except Prince Edward Island levy taxes of various kinds on mining operations. All provinces except Prince Edward Island and Alberta impose a tax on the income of firms engaged in mining operations in general or in specific kinds of mining operations. The Provinces of British Columbia, Alberta, Saskatchewan, Manitoba and Ontario impose a tax on the assessed value of minerals or a flat rate per acre of mining property. Manitoba imposes rates of from 6 p.c. to 11 p.c. on mining royalties.

Tax on Logging Operations

The Provinces of Ontario, Quebec and British Columbia levy a tax on the income from logging operations of individuals, partnerships, associations or corporations engaged in this activity. In Quebec and Ontario the rate is 10 p.c. on net income where in excess of \$10,000 and in British Columbia the tax is 10 p.c. on net income where in excess of \$25,000. In Ontario and Quebec one third and in British Columbia 18 p.c. of the tax is allowed as a deduction from provincial corporate income tax, and the remainder is deductible from federal income tax.

Business Taxes

The Province of Quebec imposes a tax of one tenth of 1 p.c. on paid-up capital of corporations and Ontario levies a similar tax at the rate of one twentieth of 1 p.c.

The Provinces of Quebec and Ontario have a place-of-business tax. In Quebec, the tax ranges from \$25 to \$100 for each place of business with the higher amounts being levied when capital paid up is \$100,000 or more. In Ontario, the tax for each permanent establishment is the lesser of \$50 or one twentieth of 1 p.c. of paid-up capital of the corporation involved, but the total of the capital tax and the place-of-business tax cannot be less than \$20. Ontario also imposes an office tax of \$50 on every corporation that does not maintain a permanent establishment in the province but merely maintains a buying office, or merely holds certain provincial licences, or merely holds assets. A corporation that does not maintain a permanent establishment in Ontario but is represented by a resident employee or agent who is not deemed to operate a permanent establishment of the corporation in the province must pay an office tax of \$50 or one tenth of 1 p.c. of the total amount of its gross Ontario sales or revenue if less than \$50,000, subject to a minimum office tax of \$5.

Both provinces levy special taxes on certain kinds of companies such as banks, railway companies, express companies, trust companies and sleeping-car, parlour-car and dining-car companies. In Ontario, these special taxes (except the tax payable by insurance corporations calculated on gross premiums) and the capital and place-of-business taxes are payable only to the extent that they exceed the corporate income tax otherwise payable.

The Province of Prince Edward Island charges special annual licence fees to most insurance companies, banks, acceptance companies, chain theatres and chain stores, steamship companies, telephone, telegraph and electric light companies and brokers, as well as nominal licence fees to other incorporated companies, the latter being similar to filing fees in other provinces.

Land Transfer Taxes

The Provinces of Alberta and Ontario levy a tax based on the value of the consideration at which ownership of land is transferred. In Ontario, a straight one fifth of 1 p.c. tax is imposed. In Manitoba, a tax of $2\frac{1}{2}$ p.c. of the valuation or purchase price (whichever is greater) is imposed only when property is transferred under the Bankruptcy or Winding-up Acts. Other provinces do not have a land transfer tax but most have a scale of charges or fees imposed upon registration of transfer of land. These fees are not regarded as taxes since a service is rendered or an assurance given with each charge.

Tax on Security Transfers

The Provinces of Ontario and Quebec levy a tax on the sale price of securities transferred; the rates in each province are:—

Shares sold, transferred or assigned valued at—	
Under \$1.....	1/10th of 1 p.c. of value
\$ 1 to \$ 5.....	$\frac{1}{2}$ cent per share
\$ 5 to \$ 25.....	1 cent per share
\$25 to \$ 50.....	2 cents per share
\$50 to \$ 75.....	3 cents per share
\$75 to \$150.....	4 cents per share
Over \$150.....	4 cents per share plus 1/10th of 1 p.c. of value in excess of \$150
Bonds and debentures.....	3 cents for every \$100 or fraction thereof of par value.

Tax on Premium Income of Insurance Companies

All ten provinces impose a tax of 2 p.c. on the premium income of insurance companies relative to risks incurred in the province.

Succession Duties

Only the Provinces of Ontario, Quebec and British Columbia levy succession duties. These duties are a tax upon the right to succeed to property and are assessed upon the interest or benefit passing at death to an heir or beneficiary. The three provinces impose succession duties on all property situated in the province belonging to the deceased and passing at his death whether the deceased was domiciled in the province or elsewhere. Personal property wherever situated of a person dying domiciled within the province is also liable if passing to a successor resident or domiciled in the province.

The rates of succession duty are generally governed by the value of the estate, the relationship of the beneficiary to the deceased and the amount going to any one person. The rate of tax increases as the degree of relationship between the deceased and his successor becomes more remote.

Provincial Property Taxes

In unorganized (non-municipal) areas, British Columbia levies property taxes at varying rates according to class for provincial revenue. Improved, forest and tree-farm lands are taxed at 1 p.c. of assessed value; farm land at one half of 1 p.c.; wild land at 3 p.c.; coal land at 2 p.c. (non-operating) or 7 p.c. (operating); and timber land at $1\frac{1}{2}$ p.c. In unorganized (non-municipal) areas, Ontario levies a property tax of $1\frac{1}{2}$ p.c. of assessed value; the minimum annual tax in respect of any land is \$6. Nova Scotia and New Brunswick also impose property taxes of limited application.

Race Track Taxes

Ontario levies a tax on operators of race meets and upon holders of winning tickets issued under the pari-mutuel system. The tax on race meeting operators is imposed at the rate of \$1 for each day the meet is conducted. Holders of winning tickets must pay a tax equal to 6 p.c. upon the amount which would be payable to them if no percentage were deducted by the person holding the race meeting. A number of other provinces levy a pari-mutuel tax on money bet in the province on horse races: in Newfoundland the rate is 11 p.c., in Prince Edward Island $10\frac{1}{2}$ p.c., in New Brunswick $5\frac{1}{2}$ p.c., in Manitoba 10 p.c., in Alberta and Saskatchewan 5 p.c., and in Quebec 7 p.c. on ordinary pools and 9 p.c. on special pools (quinella and daily-double). In British Columbia the tax is 12 p.c. but the province returns $2\frac{1}{2}$ p.c. of money bet to horsemen and track operators for purses, etc.

Subsection 3.—Municipal Taxes

The municipalities in Canada levy taxes on the owners of property situated within their jurisdiction according to the assessed value of such property. Methods of determining assessed value vary widely but for taxation purposes it is generally considered to be a percentage of the actual value. The revenues from such taxes are used to pay for street maintenance, schools, police and fire protection, snow removal in certain communities and other community services. Special levies are sometimes made on the basis of street frontage to pay for local improvements to the property such as sidewalks, roads and sewers. Not only is there a widespread difference in the bases used for property tax but there is also a wide variety of rates applied, depending on the municipality.

In addition to the taxes described above, municipalities usually impose a charge for the water consumption of each property holder or a water tax based upon the rental value of the property occupied. There are no municipal income taxes although certain localities have retained the use of a poll tax. In Newfoundland, Quebec and Saskatchewan, municipalities are empowered to levy an amusement tax on the admission of persons to places of entertainment, although the amusement tax is generally a provincial preserve (see p. 975). Electricity and gas are taxed at the consumer level in some western municipalities and coal and fuel oil for heating purposes are chargeable in urban areas of Newfoundland. Telephone subscribers are subject to a special levy in Montreal and certain Ontario municipalities impose a tax on the gross receipts of telephone companies.

In most municipalities, a tax is levied directly on the tenant or the operator of a business. In general, business tax rates are lower than those applying to property. Three bases of assessment are in use—a fraction of the property assessment, the annual rental value of the premises, or the area of the premises. Certain municipalities may charge a licence fee instead of a business tax but others charge both a licence fee and a business tax. In Nova Scotia, all but one of the municipalities tax personal property (stock in trade, equipment, etc.) the same as real property.

Subsection 4.—Miscellaneous Levies

These are not generally referred to as taxes but they are similar to taxes in many ways.

Unemployment Insurance

For the past twenty-five years, a national program of unemployment insurance has been in operation in Canada. Essentially, it provides relief to those qualified persons who temporarily find themselves without work. It is administered by a federal commission appointed for this purpose and financed by equal contributions from employers and employees plus a contribution from the Federal Government. The amount paid into the fund by employee and employer is directly proportional to the weekly wages of the employee. The rates of contributions, together with statistics on the operation of the program, are given at pp. 745-749.

Workmen's Compensation

Legislation in force in all provinces provides compensation for personal injury suffered by workmen as a result of industrial accidents. In general, these provincial statutes establish an accident fund administered by a Board to which employers are required to contribute at a rate proportional with the hazards of the industry. See also pp. 750-751.

Hospital Insurance

A federal-provincial hospital insurance plan has been adopted by each of the ten Canadian provinces. Under this arrangement, the Federal Government pays approximately one half of the cost of hospitalization for patients who are participants under the plan. The provinces meet the remainder of the cost. Provincial revenues for this purpose are raised by various means. The Province of Quebec has increased its personal and corporation income tax. Certain provinces require the deduction of a monthly premium from the wages of their residents as a contribution or premium for the plan. In such provinces non-salaried people must also pay the premium directly if they wish to be covered by the plan. In some other provinces the proceeds of a retail sales tax are earmarked in whole or in part for the support of the hospital plan. See also pp. 288-291.

Section 3.—Federal Government Finance

Subsection 1 of this Section contains financial statistics of the Federal Government prepared as far as possible in accordance with the classifications, concepts and definitions used in the preparation of provincial and municipal finance statistics. These tables differ from the information presented in Subsection 2 in that the latter has been extracted directly from the *Public Accounts of Canada*. Detailed reports published by the Dominion Bureau of Statistics provide reconciliations of revenue, expenditure and debt as set out in Subsections 1 and 2. The *Public Accounts of Canada* presentation is retained for continuity and also because there is interest in and use for information on this basis.

Subsection 1.—DBS Statistics of Federal Government Finance

Revenue and Expenditure.—Table 4 shows details of net general revenue of the Federal Government for the years ended Mar. 31, 1963 and 1964.

Guaranteed Debt.—In addition to the direct debt already dealt with, the Government of Canada has assumed certain contingent liabilities. The major categories of this indirect or contingent debt are the guarantee of insured loans under the National Housing Act, the guaranteed bonds and debentures of the Canadian National Railways and the guarantee of deposits maintained by the chartered banks in the Bank of Canada. The remainder consists chiefly of guarantees of loans made by chartered banks to the Canadian Wheat Board and to farmers and veterans for certain authorized purposes and of guarantees under the Export Credits Insurance Act.

¹ In addition, the government has an indeterminate contingent liability in respect of rental guarantee contracts which in 1963 amounted to approximately \$14,786,770. Against this amount was a reserve of \$3,933,453 held by Central Mortgage and Housing Corporation.

² These contingent liabilities are expressed in Canadian dollars; they are payable solely in United States dollars and are converted on the basis of \$1 U.S. = \$1.08108 Canadian.

³ As at fiscal years ended between Oct. 31 and Dec. 31, 1963.

⁴ As reported (in accordance with Sect. 45, National Housing Loan Regulations) by approved lenders at Dec. 31, 1963.

Table 13 summarizes the national debt position during the period 1956-65 as to interest and amount outstanding. Details of unmatured debt and treasury bills outstanding and information on new security issues of the Federal Government may be found in the *Public Accounts of Canada*. They are summarized by standard classification in DBS publication *Financial Statistics of the Government of Canada* (Catalogue No. 68-211).

² Based on the official

estimates of population for June 1 of the year immediately preceding the one indicated.

Subsection 3.—Revenue from Taxation

The incidence of Federal Government taxation is dealt with in Section 2. This Subsection includes statistical data on revenue received from individual income tax, corporation tax, estate tax, excise duties and excise taxes; customs receipts constitute a single item in the *Public Accounts of Canada* and are not included here.

Individual and Corporation Income Tax

Statistics of income tax collections are gathered at the time the payments are made and are therefore up to date. Over 85 p.c. of individual taxpayers are wage or salary earners who have almost the whole of their tax liability deducted at the source by their employers. All other taxpayers are required to pay most of their estimated tax during the taxation year. Thus, the greater part of the tax is collected during the same year in which the related income is earned and only a limited residue remains to be collected when the returns are filed. The collections for a given fiscal year include tax deductions and instalments for twelve months, embracing portions of two taxation years, and a mixture of year-end payments for the first of these years and for the preceding year; they cannot therefore be closely related to the statistics for a given taxation year. As little information about a taxpayer is received when the payment is made and as a single cheque from one employer may frequently cover the tax payment of hundreds of employees, the payments cannot be statistically related to taxpayers by occupation or income. Descriptive classifications of taxpayers are available only from tax returns but collection statistics, if interpreted with the current tax structure and the above factors in mind, indicate the trend of income in advance of the final compilation of statistics.

The statistics given in Table 14 pertain to tax collections by the Taxation Division of the Department of National Revenue. The collections are for fiscal years ended Mar. 31.

14.—Taxes Collected by the Taxation Division of the Department of National Revenue, Years Ended Mar. 31, 1956-65

NOTE.—Figures for 1917-34 are given in the 1947 Year Book, pp. 999-1000; for 1935-48 in the 1951 Year Book, p. 994; and for 1949-55 in the 1956 edition, p. 1066.

Succession Duties and Estate Taxes

A history of succession duties is given in the 1956 Year Book, pp. 1064-1068. From Jan. 1, 1947 to Mar. 31, 1963, only Ontario and Quebec among the provinces levied succession duties, the other provinces having leased this field to the Federal Government under the terms of the 1947, 1952 and 1957 tax agreements (see p. 964). However, British Columbia re-entered the field, effective for all deaths occurring on or after Apr. 1, 1963. The incidence of the estate tax is discussed at pp. 970-971.

Federal revenue from succession duties and estate taxes in the year ended Mar. 31, 1964 amounted to \$90,671,283. In the same year, Quebec's revenue from succession duties amounted to \$36,393,000 and Ontario's revenue from succession duties to \$44,121,000.

Excise Taxes

Excise taxes collected by the Excise Division of the Department of National Revenue are given for the years ended Mar. 31, 1963 to 1965 in Table 21.

21.—Excise Taxes Collected, by Commodity, Years Ended Mar. 31, 1963-65

¹ Excludes tax credited to the old age security fund.

² Net after deduction of refunds and drawbacks.

Excise Duties

Gross excise duties collected are given in the following statement for the years ended Mar. 31, 1963 and 1964. The totals do not agree with net excise duties as shown in Table 9 because refunds and drawbacks are included. A drawback of 99 p.c. of the duty may be granted when domestic spirits, testing not less than 50 p.c. over proof, are delivered in limited quantities for medicinal or research purposes to universities, scientific or research laboratories, public hospitals, or health institutions in receipt of federal and provincial government aid.

Section 4.—Federal-Provincial Conditional Grants and Shared-Cost Programs*

During the past decade there has been a rapid increase in federal expenditures on joint federal-provincial programs. These programs take three forms: (1) the Federal Government contributes financial assistance to a program administered by a province; (2) the federal and provincial governments each assume the sole responsibility for the construction, administration and financing of separate aspects of a joint project; or (3) the province contributes financially to a joint program administered by the Federal Government.

The first category of joint programs is by far the most common and such programs are commonly called conditional grant programs. They are characterized by the Federal Government agreeing to make money available to a province on certain conditions, such

*Prepared (August 1965) in the Federal-Provincial Relations Division, Department of Finance, Ottawa.

Donald V. Smiley, *Conditional Grants and Canadian Federalism* (Canadian Tax Papers No. 32), Toronto, Canadian Tax Foundation, February 1963. Federal-Provincial Relations Division, Department of Finance, *Federal-Provincial Conditional Grant and Shared-Cost Programmes, 1962*, Ottawa, Queen's Printer, October 1963, \$3 (Catalogue No. F2-2563). Appendix to House of Commons Debates of Sept. 10, 1964. Statutes of Canada, 1964-65, c. 54.

conditions always specifying the field, service or project to which the money must be applied. In addition, the province may be required to make a financial contribution to the program, to provide certain facilities, and to maintain the program at certain specified standards. The various programs in the welfare field are good examples of conditional grant programs. Under the old age assistance program, the Federal Government undertakes to share with a province the cost of assistance to persons who have attained the age of 65 years to the extent of 50 p.c. of a monthly assistance allowance of \$75; the recipient, besides being above a certain age, must have been a resident of Canada for 10 years and his income, including the assistance, must not be in excess of \$1,260 a year if unmarried, \$2,220 if married, and \$2,580 if married to a blind spouse. The provinces are entrusted with the administration of the program and are required to bear the administrative costs as well as one half of the monthly allowance.

Although the old age assistance program, with its specification of the standards for eligibility, the level of the allowance and the federal share of the joint costs, is characteristic of conditional grant programs, there are some in which the conditions are nominal. For example, under the employment assistance program the Federal Government undertakes to share one half of the cost of relief paid to social assistance recipients, the scale and conditions of the assistance to be determined by the provinces. In general, it may be said that the old age assistance program conforms to the traditional pattern of conditional grants, whereas the unemployment assistance program marks a newer approach in which flexibility and adaptability to local circumstances has been allowed to modify insistence on a national uniform standard.

The federal payments to the provinces under the conditional grant programs increased from \$75,000,000 in the year ended Mar. 31, 1954, to an estimated \$935,000,000 in 1964-65. The increase was attributable largely to the introduction of the unemployment assistance program in 1955 and the hospital insurance and diagnostic services program in 1958, to the increase in the level of old age assistance, disabled persons' and blind persons' allowances, and to the enlargement and reorientation of the vocational and technical training program (see Index). In 1964-65, federal contributions to the programs under the unemployment assistance and the hospital insurance and diagnostic services programs were estimated at \$107,000,000 and \$433,000,000, respectively.

Joint programs in the second category—those in which the federal and provincial governments accept sole responsibility for portions of a total project—are not numerous and are generally of a public works type. The irrigation projects carried out jointly by the Prairie Farm Rehabilitation Administration and the Province of Alberta on the St. Mary's and Bow Rivers in southern Alberta are of this nature, as are the bridges recently built or under construction between Cross Point in Quebec and Campbellton in New Brunswick, or between Ottawa in Ontario and Hull in Quebec. In the St. Mary's irrigation project, the Federal Government has undertaken the responsibility for the construction of all main reservoirs, large dams and connecting works, and Alberta has assumed responsibility for the construction of the distribution system and the development and colonization of the new irrigable areas. (See also p. 447.)

Joint programs in the third category are also few in number and the sums of money involved are seldom large. The Fraser River Board and the South Saskatchewan River Dam are two examples. The Fraser River Board was established by Canada and British Columbia in 1955 to investigate flood control and hydro-electric power generation on the Fraser River. Canada undertook to pay the costs of the Board in the first instance with British Columbia subsequently reimbursing Canada for half of the expenditures of the Board. In the case of the South Saskatchewan River project, Saskatchewan is to reimburse Canada for 25 p.c. (up to a maximum of \$25,000,000) of the federal expenditure on the dam and reservoir. In the year ended Mar. 31, 1964, British Columbia's share of the joint expenditures on the Fraser River Board amounted to \$64,335, and Saskatchewan's share of the expenditures on the South Saskatchewan River project was \$3,578,383.

The increasing number and extent of conditional grant and shared-cost programs has occasioned some provincial criticisms and misgivings. It has been argued that the preponderant occupancy of the direct tax field in the postwar years by the Federal Government encouraged the growth of such programs as the provinces were denied the revenues that would have enabled them to provide equivalent programs themselves. At the 1964 Federal-Provincial Conference, the Province of Quebec proposed that a province be given the option to assume full administrative and financial responsibility for certain joint programs on the Federal Government making available to that province the necessary additional tax room. The "contracting-out" proposal was referred to a federal-provincial committee of officials for consideration. As a consequence of their consideration, the Prime Minister of Canada, in a letter to the provincial Premiers dated Aug. 15, 1964, proposed a temporary measure permitting a province to contract out of certain programs for an interim period pending the development of more permanent arrangements. Parliament approved the necessary legislation—the Established Programs (Interim Arrangements) Act—in April 1965. Under the Act the Government of Canada is authorized to enter into agreements with any province that wishes to contract out of certain conditional grant programs. The nature and number of programs are itemized in the schedules to the Act.

Schedule I lists the major conditional grant programs of a continuing nature which a province may contract out of, and Schedule II lists smaller and more transient programs. The Schedule I programs are: (1) hospital insurance; (2) old age assistance, blind persons' allowances, disabled persons' allowances, and the welfare portion of unemployment assistance; (3) the technical and vocational training programs for youths who are not yet members of the labour force; and (4) the health grant program, except those elements that involve research and demonstration. The Schedule II programs are: (1) agricultural lime assistance; (2) the forestry programs; (3) hospital construction grants; (4) campgrounds and picnic areas; and (5) the roads to resources program.

If a province wishes to contract out of a Schedule I program, it must enter into a supplemental agreement in which it undertakes to assume full responsibility for the administration and financing of the program. The Federal Government undertakes to ensure that the province receives revenue equivalent to the fiscal burden it assumes. The Federal Government undertakes to (a) abate by a specified percentage the federal individual income tax on the income of residents of the province; (b) pay an associated equalization; and (c) make an operating cost adjustment. The operating cost adjustment payment or recovery is to ensure that a province does not suffer or benefit financially through assuming the financing of the federal share of the former joint program. Because of their smaller size and lack of continuity, the compensation associated with contracting-out of a Schedule II program does not provide for federal tax abatement or associated equalization payments. The compensation for these programs will be paid directly to the province by the federal Minister of Finance.

The freedom of a province to vary the nature and condition of a program which it has contracted out of differs between the Schedule I and Schedule II programs. Under the Act, a supplemental agreement with respect to a Schedule I program can vary the conditions of the original agreement only as to the manner in which Canada will contribute to the program and the manner in which accounts are submitted. A supplemental agreement for a Schedule II program may require the program to be continued as in the original authority or it may allow a province to substitute a provincial program whose objectives are substantially similar.

The Established Programs (Interim Arrangements) Act is designed to provide for an interim period during which a province may assume greater administrative and financial responsibility for the enumerated programs and during which time more permanent arrangements governing joint programs may be devised. The length of the interim period is set out in the Act for each program and varies from Mar. 31, 1967 to Dec. 31, 1970. The tax abatement associated with Schedule I programs is also set out in the Act and varies from 1 p.c. for the health grants program to 14 p.c. for hospital insurance.

¹ Provinces excepted are shown in parenthesis.² As here used, 50 p.c. may mean the province must contribute 50 p.c. of the cost of the project or must match the federal contribution.³ F = a maximum limit set to the federal share; P = a maximum limit to the provincial share; and O = federal and provincial shares are open-ended.⁴ Source: *Public Accounts of Canada, 1963-64*.⁵ Not uniform.⁶ Provinces to provide administration, services, facilities, land, loans or to undertake a specific portion of the project, etc.⁷ Represents the provincial and/or municipal share.⁸ Each government undertakes to carry out an aspect of the program and bear the costs associated with that aspect.⁹ Provinces to maintain existing level of expenditures.¹⁰ Share for provision of services only.¹¹ Disbursement made by Central Mortgage and Housing Corporation as Federal Government agent.

Section 5.—Provincial Public Finance

Provincial government accounting and reporting practices vary considerably so that certain adjustments to the *Public Accounts* figures are required in order to produce comparable statistics. For example, transactions relating to a specific function are sometimes excluded from ordinary account; therefore special or administrative funds of this nature have been added to provincial ordinary account in the tables of this Section. The fiscal years of all provinces end on Mar. 31.

Revenue and Expenditure.—Table 23 shows net revenue and expenditure of provincial governments for the years ended Mar. 31, 1959-63, and Tables 24 and 25 give details of such revenue and expenditure for the fiscal year ended Mar. 31, 1963. "Net general revenue" and "net general expenditure" are arrived at by first analysing the combined revenues and expenditures of capital account, current or ordinary account and those working capital funds and special funds for which separate accounts are kept. Then the following types of revenue are deducted from revenue and offset against related expenditure: interest, premium, discount and exchange; institutional revenue; and grants-in-aid and shared-cost contributions from other governments. Table 26 gives details of the amounts paid to other governments by provincial governments, according to nature of payment.

¹ Includes bonds issued by the Ontario Junior Farmer Establishment Loan Corporation \$20,000,000 and by the Ontario Municipal Improvement Corporation \$23,000,000.
² Includes bonds due \$2,000.
³ Includes debts assumed by the province as follows: Metropolitan Boulevard \$55,314,000, bonds issued by the Quebec Municipal Commission in the name of school corporations \$16,228,000 and University Financing Act \$12,360,000.
⁴ Includes net liability of the province re Ontario Savings Account authorized: Mar. 31, 1964.
⁵ Excludes debt of toll road authority.
⁶ Excludes bonds of the Halifax-Dartmouth Bridge Commission \$3,898,000.
⁷ Excludes bonds of the Halifax-Dartmouth Bridge Commission \$3,898,000.
⁸ In addition, the province has guaranteed the interest on school district debentures having a par value of \$4,812,000 and on sewage disposal and water supply debentures having a par value of \$2,831,000.
⁹ Excludes guaranteed interest under the School Borrowing Assistance Act and the School Building Assistance Act on principal borrowings of \$12,452,000; includes guarantee of debentures issued by the Alberta Municipal Financing Corporation to finance the purchase of municipal debentures (see footnote 2, Table 34).

Section 6.—Municipal Public Finance

Municipal Taxation.—Table 30 shows, for the year 1962, local taxes levied by municipalities and by some school authorities and total taxes outstanding at the end of the year. Because of the considerable differences in the division of responsibility for services between the provincial governments and their respective municipalities, these figures should not be used as a basis for interprovincial comparisons of the relative burden of municipal taxation.

30.—Municipal Taxation, by Province, 1962

The interpretation of the symbols used in the tables throughout the Year Book will be found on p. viii of this volume.

In this Chapter various statistical statements and studies are presented in which broad areas of Canadian economic activity are covered in a comprehensive but summary form. These integrated aggregative economic accounts provide an interrelated framework for economic analysis and the observation of changes in the functioning of the Canadian economy and its structure and in economic and financial relationships with other countries.

Section 1.—National Accounts

The national accounts constitute a set of accounting summaries for the nation as a whole and portray economic activity in terms of transactions taking place between different sections of the economy. By combining and summarizing these operations into their various classes, information may be obtained on the functioning of the economy which is of particular interest to governments concerned with problems of full employment, taxation and prices, and to business men concerned with programs of investment and marketing.

This measurement of the nation's output is in terms of established market prices; hence it is necessary to keep in mind that the value of the nation's production may change because of price variations as well as through increase or decrease in volume of output.

Data are available showing volume changes in gross national expenditure in addition to the value figures. Gross national expenditure is shown in Table 4 in constant dollars (i.e., in terms of 1949 prices). Because the gross national expenditure equals the gross national product, these data also reflect volume changes in the production of goods and services as measured by the gross national product. In the other tables in which the data are expressed in current dollars, year-to-year changes must be considered in relation to price changes over the period.

The tables on pp. 1018-1022 cover the more important aspects of the national income analysis in annual terms. Definitions are as follows:—

National Income.—Net national income at factor cost measures the current earnings of Canadian factors of production (i.e., land, labour, capital) from productive activity. It includes wages and salaries, profits, interest, net rent and net income of farm and non-farm unincorporated business.

* Sections 1-4 were prepared in the National Accounts and Balance of Payments Division, Dominion Bureau of Statistics, and Sections 5 and 6 by the authorities concerned.

Gross National Product.—Gross national product, by totalling all costs arising in production, measures the market value of all final goods and services produced in the current period by Canadian factors of production. It is equal to national income plus net indirect taxes (indirect taxes less subsidies), plus capital consumption allowances and miscellaneous valuation adjustments.

Personal Income.—Personal income is the sum of current receipts of income whether or not these receipts represent earnings from production. It includes transfer payments from government (such as family allowances, unemployment insurance benefits and war service gratuities) in addition to wages and salaries, net income of unincorporated business, interest and dividends and net rental income of persons. It does not include undistributed profits of corporations and other elements of the national income not paid out to persons.

Gross National Expenditure.—Gross national expenditure measures the same aggregate as gross national product, namely, total production of final goods and services at market prices, by tracing the disposition of production through final sales to persons, to governments, to business on capital account (including changes in inventories) and to non-residents (exports). Imports of goods and services, including net payments of interest and dividends to non-residents, are deducted since the purpose is to measure only Canadian production.

Economic Activity in 1964

Gross national expenditure reached \$47,003,000,000 in 1964, compared with \$43,180,000,000 in 1963. This gain of 9 p.c. was the largest annual advance since 1956. Since prices were almost 2½ p.c. higher, the increase in terms of constant dollars was 6½ p.c. Western grain crops, although large, were considerably smaller than the exceptional harvest of 1963, with the result that the rate of increase in non-farm output exceeded that in output as a whole.

The pace of expansion was uneven throughout the year. An upsurge in the first quarter was associated with special circumstances—the Government's winter house-building incentive program, forward buying of certain capital goods in anticipation of the progressive imposition of the sales tax, and huge sales of wheat following the contract entered into with the Soviet Union in the latter part of 1963. With these special factors absent or not present in the same degree, the pace of expansion was more moderate during the remainder of the year.

The expansion in 1964 was broadly based, all components of final demand contributing to the gain. In addition, business stock accumulation was substantially higher than in 1963 but, with outlays for business capital goods up 18 p.c., the strongest forward impetus came from the investment sector; expenditures for plant and equipment made a major gain, reflecting larger programs in a wide range of industries, and housing reached new records. Consumer markets were buoyant; spending rose almost 7½ p.c., one of the largest gains in recent years. The demand for durables was unusually strong, although the rate of increase in car sales was not as high as in the two previous years.

The international climate favoured the expansion of trade despite a slowing down in the rate of growth in some overseas countries during the course of the year. In addition to a major increase in the already high level of wheat shipments, there were substantial gains in exports of many export products and exports of goods and services were up 15 p.c. The high and rising level of economic activity in Canada, particularly in the investment sector, contributed to a 13-p.c. rise in imports of goods and services. The further narrowing of the deficit on current international transactions due to the increased surplus on merchandise trade was one of the notable developments of the year.

Government purchases of goods and services were appreciably higher than in 1963, paced by an increase of over 9 p.c. at the provincial-municipal level. Federal purchases of goods and services, which amount to a little over half those of other levels of government, were 3½ p.c. higher. Other government expenditures which, although not directly a part

of the gross national product, contribute indirectly to final demand by supporting expenditure by other sectors, rose by 8 p.c. Government revenues advanced more sharply than expenditures and the government sector as a whole came into virtual balance, the federal deficit shifting to a surplus for the first time since 1957 and the provincial-municipal deficit remaining unchanged.

The salient developments on the income side were a nearly 9-p.c. rise in labour income, the largest since 1956, and an increase in corporation profits of nearly 15 p.c. Farm income reflected the drop in crop production from the exceptionally high level of the previous year.

The changes in expenditure and income described above were associated with an expansion in employment of 3.6 p.c. in 1964 and a drop in the average rate of unemployment from 5.5 p.c. to 4.7 p.c. of the labour force; the growth in non-agricultural employment was 4.3 p.c. By the end of the year, the rate of unemployment had fallen to 4.0 p.c. from 4.9 p.c. a year earlier.

With over-all prices increasing by nearly $2\frac{1}{2}$ p.c., approximately three fourths of the 9-p.c. increase in the gross national product from 1963 to 1964 represented a gain in real terms. Prices increased slightly more in 1964 than in 1963; prices of consumer goods and services advanced by $1\frac{1}{2}$ p.c. in both years and prices of investment goods, affected by the progressive implementation of the federal sales tax on production machinery and building materials, increased by about $3\frac{1}{2}$ p.c. compared with just over $2\frac{1}{2}$ p.c. in 1963. The price component of exports of goods and services advanced by a little over 2 p.c. in 1964 and prices of imported goods and services by less than 2 p.c. Within the consumer goods and services sector, prices of durable goods declined 1 p.c. as a result of a decrease of about $2\frac{1}{2}$ p.c. in the prices of new cars; non-durable goods prices advanced by almost 2 p.c., with clothing and food prices increasing by 3 p.c. and $1\frac{1}{2}$ p.c., respectively; prices of the service component rose about 2 p.c., with rather widespread advances in all the main components other than rents, which advanced only slightly.

Components of Demand.—Personal expenditure in 1964 was almost $7\frac{1}{2}$ p.c. higher than in 1963, showing one of the largest gains in recent years. Since prices were higher by $1\frac{1}{2}$ p.c. on consumer purchases, the real growth was 6 p.c.

All components shared in the strong demand for durables, particularly furniture, appliances and radios and home furnishings which reflected, in part, the activity in housing. The $11\frac{1}{2}$ p.c. increase in the net purchases of new and used cars was below the 14 p.c. recorded during the previous two years, possibly because of the interruption in supplies caused by work stoppages. Purchases of new cars contributed more than half of the growth in durables and it is noteworthy that purchases of cars of overseas manufacture increased sharply, reversing the trend evident for the previous few years. Purchases of non-durable goods increased more than 6 p.c. over 1963; increases in food and clothing provided the main impetus and moderate increases were registered in sales of alcoholic beverages and tobacco. Purchases of fuel and gas declined fractionally.

The growth of almost 8 p.c. in expenditure on services accounted for roughly 40 p.c. of the increase in total consumer spending. Increases of about 8 p.c. were registered in personal services and personal care and of 7 p.c. in recreation. Shelter expenses were up almost 6 p.c. compared with an 8-p.c. increase in the previous year. Part of the growing demand for services was attributable to higher outlays in 1964 by Canadians travelling abroad.

Spending on business fixed capital in 1964 totalled \$8,968,000,000, up 18 p.c. from 1963; based on 1957 prices, the compound rate of growth was some 13 p.c., the highest since 1956. The upsurge, spread throughout the year, resulted in an annual rate $4\frac{1}{2}$ p.c. above the yearly average. Residential capital formation, at \$2,021,000,000, was more than 18 p.c. higher than in 1963. The 165,700 building starts surpassed the previous record of 164,600 made in 1958; completions numbered about 151,000 units, 18 p.c. more than in 1963; and dwellings under construction at the end of the year numbered 107,700

compared with 96,600 at the end of 1963. About nine tenths of the expansion in housing starts was in multiple dwellings, mostly in urban areas. Changes in housing activity may be attributed to the availability of mortgage money, to winter house-building incentive programs, to demographic factors and perhaps to the increased attractiveness of apartment accommodation. Non-residential building and engineering capital formation also advanced by about 18 p.c. to \$3,343,000,000. About half of the gains were in utility projects, notably in the electric power, urban transit and railway industries, and large expansions occurred in manufacturing by the paper, transportation equipment and primary metal industries; in mining by petroleum and oil wells and by iron mines; and in the financial industries by real estate companies. The industrial composition of 1964 private construction differed from that of 1963 in that there was a significantly smaller relative share for trade and commercial services.

Producers' durable equipment spending moved 18 p.c. higher than in 1963 to reach \$3,604,000,000. About two thirds of the gain was in manufacturing, particularly in the paper, primary metal, textile and transportation equipment industries, and other major gains were in agriculture and the railway industry. The industrial composition of 1964 machinery and equipment outlays differed from 1963 in that there was a significantly larger relative share for manufacturing and reduced shares for utilities and agriculture.

Non-farm stock accumulation amounted to \$510,000,000 in 1964 compared with \$200,000,000 in 1963. Although this was by far the largest annual increase during the economic expansion, the inventory held by business did not appear high in relation to output. Four fifths of the increase occurred in manufacturing and retail inventories; wholesale stocks increased also, but at a much lower rate. Most of the accumulation of inventories in manufacturing took place in durables, particularly in transportation equipment, metal fabricating and electrical goods industries. Among non-durables, much of the important change was in the newsprint industry, which shifted from depletion in 1963 to accumulation in 1964. For manufacturing as a whole, the stock-to-ships ratio at the end of the year was the same as that of a year earlier. All the increase in wholesale stocks was accounted for by the durable lines; the movements in non-durable trades were mixed and offsetting. The stock-to-sales ratio for all wholesale industry at the end of 1964 was lower than a year earlier. In retail trades, compared with 1963, durables were built up at a much reduced rate and non-durables at a much higher rate. The development in durables was largely the result of a curtailment in supply to new car dealers in the latter part of the year when strikes occurred in the automobile manufacturing industry. At the end of the year, the stock-to-sales ratio for all retail trade was higher than a year earlier.

The deficit in Canada's external account (on a national accounts basis) fell from \$524,000,000 to \$428,000,000 in 1964, the smallest deficit recorded since 1954. The change of \$96,000,000 resulted from an increase in the surplus in merchandise trade of \$197,000,000, partly offset by a rise of \$101,000,000 in the deficit on non-merchandise trade; about three quarters of the latter may be attributed to a turnabout from a surplus to a deficit in the travel account. Higher deficits in the interest and dividends account (at record levels for both receipts and payments) and the miscellaneous account (government expenditure, business and other services), and a drop in gold production available for export offset an improvement in the freight and shipping account. Massive shipments of wheat to the Soviet Union and other communist countries were a special factor in the 16-p.c. rise in merchandise exports; other gains were made in zinc, nickel, copper, iron ore and concentrates, newsprint, wood pulp, aircraft (after allowance for progress payments and deliveries), cars and trucks, motor vehicle parts, fish, barley, petroleum, farm and non-farm machinery, lumber and natural gas. Merchandise imports rose about 14½ p.c.; the increases were widespread among commodities but were particularly notable for non-farm machinery, automobile parts, electrical apparatus, tractors, engines and cars and trucks, farm equipment and steel plate, sheet and strip.

Total revenues of all governments combined (excluding inter-governmental transfers) increased by over $12\frac{1}{2}$ p.c. over 1963 to \$14,595,000,000. Total expenditures increased less sharply, by $7\frac{1}{2}$ p.c., resulting in a significant narrowing of the combined deficit (on a national accounts basis) from \$632,000,000 in 1963 to \$20,000,000 in 1964. The improvement in the deficit position came at the federal level where an increase in revenues more than double that of expenditures changed a deficit of \$292,000,000 in 1963 to a surplus of \$328,000,000 in 1964, the first annual surplus recorded since 1957. At the provincial-municipal level, the deficit changed little as revenues and expenditures increased by similar amounts.

The expansion of activity in the economy in 1964 was reflected in the advances of all components of total government revenues. Indirect tax revenue rose by 13 p.c. with the federal and the provincial-municipal governments sharing almost equally in the absolute increase. Most of the gain at the federal level was in excise taxes, resulting in part from increases in the sales tax rate on production machinery and building materials; provincial revenues from gasoline and sales taxes rose by almost 20 p.c., an increase associated with a higher volume of sales and some upward revision in tax rates; increased property taxes accounted for most of the rise at the municipal level but it was tempered somewhat by reduced returns from retail sales taxes attributable to the withdrawal in April 1964 of Quebec municipalities from the sales tax field in favour of the province.

Total corporate and personal direct taxes amounted to \$5,396,000,000, an increase of 14 p.c. over 1963. Reflecting improvement in employment and rising incomes, total revenue from federal and provincial personal income taxes was up 17 p.c. Accentuating the rise in federal personal income tax revenues was an increase from 3 p.c. to 4 p.c. (to a maximum of \$120 per taxpayer) in the levy on personal income on behalf of the Old Age Security Fund. There was an increase from 17 p.c. to 18 p.c., effective Jan. 1, 1964, in the abatement of the income tax in favour of the provinces under the terms of the federal-provincial fiscal arrangements.

Investment income accruing to government rose by almost $10\frac{1}{2}$ p.c., the largest increase occurring in trading profits of government enterprises. At the federal level, investment income increased by 9 p.c. Larger trading profits of power commissions and utilities accounted for more than half of the increase at the provincial-municipal level.

Total expenditures of all levels of government (excluding transfers between different levels of government) advanced by $7\frac{1}{2}$ p.c. or by \$1,022,000,000 from 1963 to 1964, more than two thirds of the gain occurring at the provincial-municipal level. Provincial-municipal expenditures on goods and services rose by over 9 p.c. and federal outlays on goods and services by only $3\frac{1}{2}$ p.c.; the latter was accounted for by an increase of \$127,000,000 in non-defence outlays and a decline of \$24,000,000 in defence goods and services.

Income Flows.—Labour income for 1964, estimated at \$23,416,000,000 and up nearly 9 p.c. over 1963, recorded the largest year-to-year gain since 1956. Wages and salaries in the goods-producing and in the service-producing industries rose at approximately the same rate—9 p.c. In the former group, although construction showed the largest increase of about $11\frac{1}{2}$ p.c., substantial gains of almost 9 p.c. were made in manufacturing industries. In the service-producing industries, finance and service recorded a gain of over 11 p.c. and trade advanced close to 9 p.c. Wages and salaries in government non-military employment and in the transportation, communication and other utilities industries rose by 6 p.c. These gains in labour income were associated with a rise in the number of employed paid workers of nearly $4\frac{1}{2}$ p.c.

Corporation profits (before taxes and before dividends paid to non-residents) reached a record level in 1964 of \$4,580,000,000, an amount $14\frac{1}{2}$ p.c. above 1963. Most industries showed substantial increases—transportation was up almost 40 p.c.; mining, quarrying and oil wells rose over 30 p.c.; primary metal industries, metal fabricators, and machinery each increased about 20 p.c.; and wholesale trade, finance and service each rose about 15 p.c. Profits in the transportation equipment industry fell sharply in the latter part of the year when strikes interrupted the production of automobiles; on an annual basis profits were down 10 p.c. Profits in the textile industry and in public utilities also declined.

Rent, interest and miscellaneous investment income rose by 6 p.c. to reach \$3,277,000,000 in 1964, mainly because of the rise in trading profits of government business enterprises and increased receipts from withholding taxes. Net income of non-farm unincorporated business increased to \$2,587,000,000, about 5 p.c. above 1963. The largest gain, over 13 p.c., was in the construction industry which contributed more than one third of the total increase. Marked advances were also registered in service and finance industries.

Accrued net income of farm operators from farm production in 1964 was \$1,472,000,000, close to 15 p.c. lower than the record attained in 1963 but nearly 18 p.c. higher than the 1954-63 average; the value of the grain crop, estimated at \$1,133,000,000 was \$248,000,000 less than in 1963. Farm cash income, the largest component of farm net income, reached an all-time high of \$3,456,000,000, $8\frac{1}{2}$ p.c. above 1963. Major items contributing to the increase were wheat, flax, dairy products and potatoes but offsetting the increase was a decline in farm grain inventories. Gross income declined 3 p.c.

Farm operating expenses also reached a record high in 1964, although the increase of 4 p.c. over 1963 was somewhat lower than the previous ten-year average. Contributing to the increase in farm operating expenses were higher payments for fertilizers, interest on debts, operation of farm machinery including repair, livestock feed and farm labour.

Economic Activity in the First Half of 1965

Economic activity continued to expand in 1965. In the first half of the year, gross national product was at a seasonally adjusted annual rate of \$50,494,000,000, about $7\frac{1}{2}$ p.c. higher than in 1964; with prices higher, the gain in real terms was about $5\frac{1}{2}$ p.c. Part of the advance reflected the forecast of an exceptionally large crop in the Prairie Provinces, which added significantly to the nation's production despite some deterioration in quality caused by poor weather in the harvest season.

Turning to the components of demand, the sharpest advance in the first half of 1965 relative to the year 1964 was in gross fixed capital formation which was up more than 13 p.c. At the same time, government expenditure on goods and services was higher by more than 7 p.c. and consumer spending by 5 p.c. The expansionary stimulus of the increase in final domestic demand was reinforced by a substantially higher rate of stock-building. A moderate gain in exports of goods and services was accompanied by a much larger advance in imports, with the result that the deficit on current international account rose to \$1,000,000,000 at seasonally adjusted annual rates, more than double that of the previous year.

As reflected in income, expansion in the first half of 1965 brought an 8-p.c. gain in labour income and a $7\frac{1}{2}$ -p.c. advance in corporate profits, at seasonally adjusted annual rates. Income at the disposal of consumers for spending rose appreciably more than national income, mainly because of the extraordinarily large payments made to farmers by the Canadian Wheat Board early in the year.

In the situation of growing demand outlined above, total employment and non-farm employment rose 3.1 p.c. and 3.8 p.c., respectively, and the rate of unemployment fell from 4.7 p.c. to 4.2 p.c. of the labour force when seasonal factors are taken into account.

Section 2.—Industry Production Trends

Indexes of Real Domestic Product

The Dominion Bureau of Statistics in 1963 made available a new set of production data pertaining to the entire spectrum of Canadian industries. These data, in the form of volume of production indexes, are measures of value added for each industry expressed in the dollars of a base year. Technically, they are termed "indexes of real domestic product (GDP) at factor cost originating by industry".* The value added, or GDP, volume indexes can be regarded as an extension of the index of industrial production† to encompass the remainder of the economy. Concepts and basic methods used to construct both indexes are the same. Thus, industry production index coverage is extended from mining, manufacturing and electric power and gas utilities, for which volume indexes have been published since the 1920's, to include all other major industrial divisions—agriculture, forestry, fishing and trapping, construction, retail and wholesale trade, finance, insurance and real estate, transportation, storage and communication, public administration and defence, and community, recreation, business and personal service. However, only the index of industrial production is published on a monthly basis; for the remaining industries only quarterly and annual indexes are currently being published. The GDP indexes can also be regarded as an extension of the national accounting framework, i.e., as an elaboration of the supply side of the national income accounts.*

In measuring the output of a single product such as steel, it is normal to think in terms of tons of steel when the question of quantity arises. When measuring the combined production of steel and natural gas, there is an obvious need for a common denominator and it is appropriate to use the average unit prices of a certain time period (chosen as the base) to value the quantities produced before adding them together. The resultant quantity, volume or real output measure can be subsequently left in its constant or base period dollar form or it can be expressed in index number form. The latter is accomplished

* *Indexes of Real Domestic Product by Industry of Origin, 1935-61* (Catalogue No. 61-505). This paper provides a detailed explanation of concepts, uses and limitations, data sources, methodology, etc., and covers a much wider range of industries than provided in this Section. Current quarterly data are published in DBS monthly *Index of Industrial Production* (Catalogue No. 61-005).

† See *Revised Index of Industrial Production, 1935-57* (Catalogue No. 61-502) and the current monthly publication *Index of Industrial Production* (Catalogue No. 61-005).

by dividing the constant dollar aggregate of the current period by the dollar aggregate for the base period and multiplying by 100. In constructing a quantity index for a combination of industries where the output of one industry becomes the input of another, the portion double-counted must be eliminated. This is accomplished by revaluing both intermediate input (materials, fuel, etc.) and total output in terms of the dollars of a common base year and subtracting the constant dollar value of the former from the latter to yield a constant dollar value added aggregate.* This aggregate is the quantity or volume measure represented by the indexes presented herein.

The annual indexes are well suited for studies of production trends, growth rates and inter-industry comparisons, but the quarterly indexes provide a much better tool for the study of the cyclical behaviour of industries, short-term changes in production and, in fact, for most types of current analysis. Statistics computed for less than annual intervals, however, are frequently subject to strong seasonal influences, and variations in the number of working days during a quarter may cause differences in the levels of output between two quarters which otherwise would not exist. Accordingly, the quarterly real output indexes have been adjusted for both seasonal and calendar variation. The effects of the seasonal adjustment are shown on the quarterly chart for the period 1949-64.

Factors Underlying Industrial Output Trends, 1946-64.—The early postwar period was marked by several major expansions. The first was based on satisfying the backlog of war-deferred investment and consumer demand and on supplying the needs of the war-devastated countries, especially for various materials. This was followed by some slowing down in production but the requirements of defence-supporting industries after the outbreak of the Korean hostilities and stock-piling requirements at home and abroad introduced a second expansionary period. The third was the investment boom of the mid-1950's during which output reached a new high level. These strong demand influences combined to make most of this period one of fairly rapid and sustained growth. During the late 1950's the rate of increase diminished, as external sources of supply for many commodities multiplied and as competition intensified. At the same time, there was an absence of strong stimulants to domestic demand, such as the deferred demand and the population growth of the preceding period. During the 1960's, however, the first waves of the postwar generation exercised a growing influence on the demand for goods and services and this proved to be one of the major stimuli to the current expansion which began early in 1961 and continued into 1965. Other notable features of the expansion were the

* See footnote *, p. 1022.

relatively slow growth of imports compared with previous expansion periods, particularly after the stabilization of the Canadian dollar and other government measures undertaken in mid-1962 (although some acceleration took place in imports of machinery and equipment during 1964 and 1965 in response to the increased investment in construction and plant and equipment); the increase in exports, particularly during the latter part of 1963 and early 1964 when large amounts of wheat were sold abroad; the above-average output of the mining and agriculture industries during 1962 and 1963; the substantial gains in the production of the iron and steel and motor vehicle and parts industries throughout most of the period; and the increased investment activity in both non-residential and residential construction and in machinery and equipment during 1964 and 1965.

Along with the increases in total final demand, there were shifts in the composition of demand, which affected the output of the various industries. Imports retained roughly the same relative share of the gross national product but the share of exports declined from 27.1 p.c. in 1946 to 22.2 p.c. in 1964, an indication of the growing importance of the domestic market as an outlet for the products of Canadian industry. Government expenditure and business gross fixed capital formation made considerable relative gains but personal expenditure on goods and services as a percentage of total expenditure declined from 67.8 p.c. in 1946 to 62.6 p.c. in 1964.

Even more remarkable than some of the demand-induced changes were the striking changes brought about by the technological discoveries and innovations that transformed whole production processes and opened up previously unknown areas in the fields of manufacturing, transportation and communication. Newer industries, such as air transport, assumed major importance in a comparatively short time; entirely new industries, such as gas pipelines, appeared; and a profusion of new products were created, such as the petrochemicals of the chemicals industry and the television and other electronic products of the telecommunication equipment industry. As was to be expected, the industries in a position to benefit from such innovations were among the most rapidly expanding in the economy, although the impact of the expansion spread through the entire economic system. The changes in production and demand also influenced the level of employment in the various industries; there was a considerable shift in employment during the postwar period from the goods-producing to the service-producing industries and most of the loss in the former took place in agriculture. From 1946 to 1964, agriculture decreased its share of total employment by 16 p.c. but total employment continued to expand. In the same period the service-producing industries increased their share from 39 p.c. to 54 p.c. of the total.

Industrial Expansion, 1946-64.—Although all the major industry groups expanded during 1946-64, development was not uniform throughout the period. Three important types of factors affecting the expansionary paths of industries were in evidence at some point during the period. The first may be described as some special factor at work in a particular industry, the effects of which would be most noticeable in that industry—for example, the demand for uranium which had an important influence on the mining industry during the latter half of the 1950's; the opening up of new mineral resources such as the iron ore mines in Quebec-Labrador; and certain technological innovations such as the development of synthetic materials or television. The second type of factor is much more general in its effects and in its causes. Such factors as increased demand for consumer goods resulting from a rising standard of living and a growing population, shifts in world trading patterns or shortages causing increased demand for export goods; the surge of investment activity associated with replacement cycles; attempts to broaden the base of economic activity through investment in research, social overhead capital, education, improved management and marketing techniques, or a more efficient production process (or a confluence of all these factors) appear to lie at the root of such postwar expansions as the investment boom of the mid-1950's or the rapid expansion in production immediately following the Second World War. The third type of factor would be some unique and far-reaching event, of which the Korean War might serve as a conspicuous example.

All three factors, jointly or in turn, have reacted on the various industries resulting in the upswings in aggregate production. The percentage growth of each of the main industrial groups in the 1946-64 period was as follows:—

<u>Industry</u>	<u>P.C.</u>	<u>Industry</u>	<u>P.C.</u>
Agriculture.....	1.5	Trade.....	4.0
Forestry.....	1.6	Finance, insurance and real estate.....	5.0
Fishing and trapping.....	1.8	Public administration and defence.....	4.2
Mining.....	8.8	Community, recreation, business and personal service..	3.6
Manufacturing.....	3.9		
Construction.....	5.2	REAL DOMESTIC PRODUCT.....	4.1
Electric power and gas utilities..	9.6		
Transportation, storage and communication.....	4.5		

Foremost in growth was the electric power and gas utilities industry, followed by the mining and construction industries. All three were strongly affected by technological advances, new discoveries and a fairly well sustained demand for their products. The demand in mining frequently came from abroad, resulting in relatively high export sales and providing incentive for the opening up and developing of new mineral resource areas. Some slackening in construction activity was evident following the unusually high levels reached during the mid-1950's but since 1963 the swing has again been upward.

Although most of the other industry divisions (except agriculture, forestry and fishing and trapping) expanded at roughly the same average rate of between about 4 p.c. and 5 p.c., the manufacturing, trade, and transportation, storage and communication industry divisions, which together account for about one half of the total output, also showed strikingly similar cyclical patterns. Both manufacturing and transportation had been given strong impetus during the Second World War and also the Korean War. Within manufacturing it was the durables component that expanded considerably during these periods of hostilities and that benefited from the need for machinery and equipment in the periods of heavy investment and from increased consumer demand. Non-durables maintained a fairly steady rate of expansion for most of the postwar period, largely in response to increased population and demand for industrial materials. Trade was less strongly affected by defence requirements and retail trade, in particular, exhibited a relatively smooth expansionary trend.

The community, recreation, business and personal service industry division was relatively insensitive both to cyclical and irregular influences but, along with some other steadily expanding industries such as finance, insurance and real estate, non-durables and retail trade, it helped to sustain aggregate production and growth during periods of contraction and expansion. Although this division as a whole showed a less-than-average rate of growth, some of its components, such as business services, education and hospitals and restaurants, hotels and motels, were among the most rapidly and steadily expanding in the economy.

The rates of growth in the forestry, agriculture, and fishing and trapping divisions were also below average and were subject to pronounced irregular fluctuations in output—forestry because of the nature of its production processes and also, to some extent, because of its sensitivity to changes in world demand and price; agriculture because of marked year-to-year differences in output more often caused by weather conditions and similar factors than by changes in prices and demand conditions; and fisheries because of its dependence on the vagaries of nature.

Production of Commodity-Producing Industries

The data contained in the tables under this heading are published in the DBS report *Survey of Production*.^{*} The scope of the survey of production is limited to industries chiefly engaged in the production of commodities and it measures production in current dollars. This is in contrast to the real domestic product series (pp. 1022-1025) which encompasses all industries and measures production in terms of the dollars of a base year.

Tables 12 and 13 give "census value added" production data, classified by province and industry, respectively. Census value added is derived by deducting the cost of materials, fuel, electricity and process supplies consumed in the production process from the gross value of output (shipments or sales adjusted for inventories). The figures include interim classification and valuation changes in mining and manufacturing brought about by the adoption of the 1960 standard industrial classification of establishments. However, the two industry aggregates continue to consist of census value added accruing from their primary activity only.^{*} Standard industrial classification changes have not yet been implemented for other industries.

^{*}DBS Catalogue No. 61-202. See Appendix II of the 1962 issue for census value added in manufacturing (all activities) 1961 and 1962.

Section 3.—Aggregate Productivity Trends

During recent years, the increasing interest in questions of economic growth, cost-structure and international competitiveness, and in the relationships between output, employment, earnings and prices has focused attention on productivity as a framework within which such problems can usefully be discussed. In recognition of this interest, the Dominion Bureau of Statistics has made available annual indexes of output per person employed and per man-hour in Canada which now cover the commercial industries as a whole, with separate detail for agriculture and the commercial non-agricultural industries as well as manufacturing and the residual commercial non-manufacturing industries of this universe.*

While these measures relate output to a single input only, namely labour time, it must be emphasized that they do not measure the exclusive contribution of labour to output. Changes in indexes of output per unit of labour input reflect the combined influence of a number of separate though interrelated factors such as the amount and quality of capital equipment, the extent of utilization of available capacity, managerial efficiency and the impact of technological progress, as well as the skill and effort of the work force.

Sources of Data.—The output components of the various indexes of output per unit of labour input referred to here originate from the historical indexes of industrial production described in Section 2, p. 1022. These indexes, which were developed within the conceptual framework of the national accounts and which measure in constant dollar terms the unduplicated contribution of each component industry to total output, are considered basically suitable for productivity measurement when matched with the corresponding input measures.

The major sources for the employment and man-hour indexes were the monthly labour force and employment surveys, and these were supplemented by data from such sources as the annual censuses of manufacturing and mining, and the decennial censuses of population and of merchandising and services. Since the data from these diverse sources varied considerably in their coverage, concepts and methods of compilation, care had to be exercised in their selection, adaptation and combination into aggregate measures of labour input which would be conceptually and statistically consistent, both internally and in relation to the output data. Labour force survey data were used for the paid worker estimates of agriculture and of fishing and trapping, while those for manufacturing and mining were based on adjusted annual census data. Estimates for most of the remaining industry divisions were derived from adjusted employment survey data. Estimates of other than paid workers (own-account workers, employers and unpaid family workers) were mainly derived from the labour force survey. The estimates of average hours worked, which were needed for the indexes of output per man-hour, were also based on labour force survey data, except in the case of manufacturing, where estimates of man-hours paid from the census of manufactures were adjusted to the man-hours worked concept.

Growth Rates.—Output per person employed in the commercial non-agricultural industries, to which the initial coverage of the indexes was confined, grew at an average annual rate of 2.3 p.c. between 1946 and 1964. Because of the decline in average hours worked per person, this is a lower rate of growth than that of output per man-hour which, during the same period, increased by 2.9 p.c. per annum. Corresponding figures for manufacturing were 2.7 p.c. and 3.1 p.c. and, for the residual non-manufacturing industries of the commercial non-agricultural sector, 2.0 p.c. and 2.9 p.c., respectively.

In agriculture, the average annual rates of growth of output per person employed and per man-hour between 1946 and 1964 were 5.2 p.c. and 5.4 p.c., respectively. However, in view of the difficulties of measuring the number and especially the man-hours of persons employed in agriculture, data presented for this industry division should be regarded as

* See DBS Reference Paper *Indexes of Output per Person Employed and per Man-Hour in Canada, Commercial Non-agricultural Industries, 1947-63* (Catalogue No. 14-501) and its first annual revision *Indexes of Output per Person Employed and per Man-Hour in Canada, Commercial Industries, 1946-64* (Catalogue No. 14-201).

approximate. In the commercial industries as a whole, output per person employed increased between 1946 and 1964 at an average annual rate of 3.1 p.c., while output per man-hour grew by 3.9 p.c. per annum.

Inter-industry Shift Effects.—In addition to measuring the changes in productivity within the component industries, the aggregate productivity indexes measure shifts in employment and production between industries having different levels of productivity. One of the most significant such shifts within the commercial industries of Canada during the postwar years was from agriculture to the non-agricultural industries, where a higher level of output per unit of labour input prevails. The effect of this shift can be measured in various ways and a number of alternative calculations have been carried out for the most recent annual publication,* all of which confirm, to a greater or lesser extent, that the decline in the relative importance of agriculture made a positive contribution to the total increase in output per person employed in the commercial industries between 1946 and 1964.

*DBS Catalogue No. 14-201.

Section 4.—Canadian Balance of International Payments*

Canada's total commercial and financial transactions with residents of other countries are presented in summary form in statements of the Canadian balance of international payments. The current account shows separately the principal types of transactions in goods and services with non-residents. The capital account provides a distribution of capital movements into direct and portfolio investments and into long-term and short-term forms. The difference between the current account balance and the balance of these capital movements in an accounting period is reflected in the change in the official holdings of gold, foreign exchange, and Canada's net International Monetary Fund position.

Since the beginning of the 1950's, apart from 1952 when there was a small surplus on current transactions, a wide degree of imbalance has characterized Canada's international payments. Larger current account deficits have customarily been associated with periods of Canadian prosperity. High levels of investment, rising personal consumption and the growth in government expenditures, including defence outlays abroad, have contributed to the deficits. These large current deficits, which reached a peak of \$1,504,000,000 in 1959, have reflected and been financed by substantial inflows of capital. Following this record high level, the imbalances in current transactions narrowed in successive years to \$433,000,000 in 1964.

As 1965 progressed it became clear that, despite further large sales of wheat, the effects of high levels of activity on imports were pointing to a deficit on current account well over twice that of 1964.

* More detailed information is given in DBS annual report *Canadian Balance of International Payments and International Investment Position* (Catalogue No. 67-201) and in *Quarterly Estimates of the Canadian Balance of International Payments* (Catalogue No. 67-001).

Current Account Transactions.—The surplus on merchandise trade,* which emerged in 1961 for the first time since 1954, expanded sharply in 1963 and in 1964 when it reached \$700,000,000; an important element in this rise was the extraordinary sales of wheat and flour to the U.S.S.R. and other communist countries. Net payments on non-merchandise transactions have been at a level of over \$1,000,000,000 since 1959 and amounted in 1964 to \$1,133,000,000. Thus, the reduction of Canada's deficit on current transactions in goods and services between 1959 and 1964 was mainly the result of a shift in the balance of commodity trade. This balance has varied widely; the record deficit of \$728,000,000 occurred in 1956 when it accounted for more than one half of the total current account deficit and the unusually large surplus of \$700,000,000 for 1964 exceeded the level of the merchandise surpluses of the immediate postwar years. The non-merchandise deficit rose steadily from 1952 to a recent peak of \$1,155,000,000 in 1961 but settled at a slightly lower level in the following years because of improvements in the travel, freight and shipping accounts and in migrants' funds.

Since 1954, when merchandise exports and imports were almost equal at \$3,900,000,000, exports have increased fairly steadily to a record, so far, of \$8,240,000,000 in 1964. Imports, on the other hand, have shown wider fluctuations in their growth pattern. The value of imports in current dollars rose more than 40 p.c. in two years to \$5,565,000,000 in 1956 and, except for a substantial drop of nearly 8 p.c. to \$5,066,000,000 in 1958, remained at about that level until 1961. From 1962 through 1964 the value rose successively by roughly 9 p.c., 6 p.c. and 15 p.c. to a record of \$7,540,000,000 in 1964.

In the past decade or so, the relative importance of exports of metals and minerals has increased markedly, that of other materials for industry, such as chemicals and fertilizers, has advanced more moderately, and the percentage shares for farm and forest products have narrowed visibly. The relative position of wheat and wheat flour, which had been diminishing, recovered sharply in 1961 as a result of the large shipments of grain to Mainland China and other communist countries. The very heavy shipments of wheat on the Russian account, together with sizable exports to Britain, Japan, Mainland China, West Germany and Eastern European countries, boosted the total value of wheat and wheat flour exports in 1964 to nearly \$1,100,000,000. During the 1960's, an increasing share of the Canadian national output has moved into foreign markets. About two thirds of the gain of nearly \$1,160,000,000 in merchandise exports to \$8,240,000,000 in 1964 originated from larger shipments—in addition to wheat and flour—of iron ores, non-ferrous metallic ores and alloys, newsprint, wood pulp, fabricated steel materials, cars, trucks, motor vehicle parts and aircraft and parts. Other increases were broadly spread over many commodities, such as barley, fish, whisky, tobacco, lumber, plywood, sulphur, natural gas, chemicals, machinery and equipment. Shipments of uranium decreased, for the fifth successive year. Shipments of highly manufactured products have grown rapidly in the recent period and this group now ranks with the food, forest and mineral product groups. Imports also rose sharply; the machinery group alone contributed over \$200,000,000 of the total rise of \$961,000,000 and less substantial yet large increases were recorded in imports of fabricated steel materials, cars, trucks, motor vehicle parts, engines, electrical apparatus, chemicals and a variety of other commodities including fruits, coffee, oil seeds, fibres and textile products. Imports of raw sugar, meat and crude petroleum were down from the higher levels of 1963.

The 1964 deficit on non-merchandise transactions of \$1,133,000,000 again approached the record level of \$1,155,000,000 reached in 1961 and was more than double that of as recent a year as 1955. A total of \$665,000,000, or close to 60 p.c. of this deficit was directly related to Canada's indebtedness abroad. Interest and dividend payments by Canadians

* Commodity trade statistics have been adjusted to reflect more closely the timing of transactions, particularly for investment goods, and to exclude commodities which are either covered elsewhere in the accounts or are not pertinent for balance of payments purposes.

to non-resident investors reached \$978,000,000, transfers in other forms of investment income amounted to over \$180,000,000, and there were also growing payments abroad for a variety of business services. Furthermore, some hundreds of millions of dollars worth of earnings, which accrued to foreigners but were retained in Canada for reinvestment, are excluded from the current account.

Among non-merchandise transactions in 1964, a noteworthy change was the turn-around of \$74,000,000 in the balance on travel expenditures from a surplus of \$24,000,000 to a deficit of \$50,000,000. This resulted from a one-third decline in net receipts to \$109,000,000 on travel transactions with the United States and a 16-p.c. rise to \$159,000,000 in the deficit with overseas countries. Expenditures in Canada by United States visitors rose to a record \$590,000,000 and Canadian expenditures in the United States, after declining in the preceding two years, climbed to a high of \$481,000,000. Because the increase in Canadian spending overseas was much larger than that in receipts from overseas visitors, net travel payments rose to \$159,000,000 from \$137,000,000 in 1963. The deficit on interest and dividends widened by \$35,000,000 to reach \$665,000,000, as both receipts and payments advanced to record levels. Interest receipts were some \$20,000,000 lower, because of the deferment by British authorities of the regular interest on the 1946 inter-governmental loan, but dividend receipts rose from higher returns on direct investment, including large non-recurring dividend receipts. Sales of new government and corporation bonds to non-residents in 1963 and 1964 brought about increased interest payments and substantial transfers of dividends on direct investment made a considerable contribution to the higher total. The deficit increase of approximately \$30,000,000 in the miscellaneous group of current transactions was accounted for mainly by rising net payments for business services. Included also were official contributions (as distinct from Mutual Aid to NATO countries) of \$69,000,000, up from \$65,000,000 in 1963. Two accounts whose deficits were lower than in 1963 were freight and shipping services and inheritances and migrants' funds. Against the net payments was an amount of \$145,000,000 representing gold production available for export.

The characteristic bilateral distribution of the Canadian current account balances was maintained in 1964; a surplus from transactions with overseas countries partially covered a deficit with the United States. However, a rise of more than 40 p.c. in this deficit from \$1,162,000,000 in 1963 to \$1,655,000,000, which was considerably smaller than the almost twofold increase in the overseas surplus to \$1,222,000,000, contributed to reducing the over-all deficit from \$542,000,000 to \$433,000,000. In current dollars, the 1964 deficit with the United States exceeded the previous record level of \$1,639,000,000 reached in 1956; the surplus on current transactions with Britain rose from \$414,000,000 to a recent high level of \$607,000,000; and the surplus with other overseas countries nearly tripled to \$615,000,000 from \$206,000,000, the latter being just short of the earlier peak established in 1952.

Capital Movements.—Although Canada continued in 1964 to draw substantially on the resources, both real and financial, of the other countries of the world, the net capital inflow of \$796,000,000 (excluding the change in official monetary assets) was well below the \$1,000,000,000-to-\$1,500,000,000 level that prevailed from 1956 to 1962. It was only moderately larger than the net inflow of \$688,000,000 in 1963. Capital movements in long-term forms, covering direct investment, portfolio security transactions, official loans and other long-term investments, amounted to \$853,000,000 in 1964, up considerably from the total of \$637,000,000 in the previous year. The long-term capital inflow exceeded the current account deficit by about 18 p.c.; the years 1963 and 1964 were the first since 1956 in which this excess occurred. Capital movements in short-term forms were on balance outwards in 1964, the flow of \$57,000,000 roughly offsetting an equivalent inflow in 1963.

The net inflow in 1964 of \$255,000,000 of capital for direct investment in foreign-controlled enterprises in Canada was down moderately from 1963 and was the lowest on

record since 1950. On balance, there were significant outflows covering re-purchase of Canadian enterprises and from re-financing. In the main, the inflows continued to reflect investment by foreign corporations in their subsidiaries and branches, which contributed to new capital formation in Canada; manufacturing enterprises and petroleum and natural gas received the largest shares. The flow of direct investment abroad of Canadian capital was estimated at \$140,000,000 in 1964, little changed from the total in 1963.

Capital inflows arising from transactions in Canadian and foreign securities amounted to \$682,000,000 compared with \$471,000,000 in 1963. New issues of bonds sold to investors in the United States were the most important factor in the expanded inflow. In 1964, Canada received a net amount of \$54,000,000 under the arrangements relating to the Columbia River Treaty; the remaining capital movements in long-term forms were largely offsetting. Bank balances and other short-term funds held abroad by Canadian residents reverted in 1963 to the trend characteristic of the 1950's; in that year the net capital outflow was over \$250,000,000 and in 1964 over \$500,000,000, the latter more than offsetting substantial inflows in the form of short-term borrowing, particularly by sales finance and consumer loan companies.

Canada's external monetary assets rose by \$363,000,000 in 1964. The official holdings of gold and foreign exchange increased by \$86,000,000 and Canada's net International Monetary Fund position by \$277,000,000.

Since the shift upward at the beginning of the 1950's, direct investment inflows have been a significant ingredient in the capital account. Continuing and substantial for nearly the entire period, these receipts contributed in particular to resource development and the growth of associated industries. However, from 1956 to 1959 and again in 1963 and 1964, the inflow for direct investment, substantial though it was, was less than the inflow of portfolio capital, as some of the sharply increased demands for new capital were channelled to foreign capital markets through the sale to non-residents of new issues of Canadian bonds and debentures. Corporations, provincial governments and municipalities were all important borrowers.

Section 5.—Canada's International Investment Position*

Canada's balance of payments is influenced to a considerable extent by the size and character of its balance of international indebtedness, a phrase used in the broad sense generally accepted in balance of payments terminology to include equity investments as well as contractual borrowings. This is true not only through the servicing of capital involving interest, dividends and miscellaneous income payments, but also through the influences of foreign investment on the Canadian economy and on the shape and direction of its external demands.

Canada has been among the world's largest importers of private long-term capital. The very substantial capital formation which was a feature particularly of the 1950's was associated with an unprecedented growth in the country's external liabilities. These investments contributed to a rapid rate of growth in the Canadian economy, particularly in the exploitation of natural resources, and added significantly to Canadian production, employment and income. At the same time they added substantially to the continuing burden of Canada's external debt and to the proportion of Canadian industry controlled by non-residents.

Canada's gross external liabilities amounted to \$30,500,000,000 at the end of 1963; non-resident-owned long-term investments in Canada had reached a book value of \$26,200,000,000 (in the two decades since World War II their value has quadrupled). The part of these investments in establishments controlled outside of Canada totalled \$15,400,000,000. These direct investments have been growing more rapidly than the total. Investments in other Canadian equities, although smaller, have also been substantial and there have been periods in recent years of sharp increase in foreign holdings of Canadian bonds and debentures.

Investments of non-resident capital have been closely related to the high rate of growth in Canada and to the heavy demands placed on capital markets by this factor and by the financial needs of governments and municipalities. Large development projects have been initiated and financed by investors from other countries and the growth effects from this investment have, in turn, led to Canadian borrowing in capital markets outside of Canada. While capital inflows have been the principal source of the increased indebtedness abroad, another substantial contributor has been the earnings from non-resident-controlled branches and subsidiaries which were retained in Canada. New resource industries depending to a large extent on non-resident financing include all branches of the petroleum industry, iron ore, potash and other mining, aluminum, nickel, pulp and paper, and chemical industries. In addition, secondary industry has also benefited from non-resident investment.

Canada's gross external assets totalled \$11,200,000,000 at the end of 1963 and government-owned assets made up a substantial part of that total. Canada's net balance of international indebtedness, including equity investments, at the same date was estimated at \$19,300,000,000, more than three quarters of which was incurred since 1950. By the end of 1965, Canada's net balance of international indebtedness had risen to about \$21,500,000,000.

Foreign Investments in Canada.—Dependence upon external sources of capital for financing in periods of heavy investment activity has been characteristic of Canadian development. During the exceptional growth that occurred before World War I, non-resident investment was very high and the main source of that investment was London. However, during the first part of the inter-war period, the United States became the principal source of external capital and by 1926 the portion of Canada's international debt owned in that country exceeded that owned in Britain. With some interruption during the 1930's, United States investment in Canada continued to increase, particularly after 1947 when the period of intense activity in the petroleum industry got under way. Nearly half

* An extended historical review appears in DBS report *Canada's International Investment Position, 1926 to 1954* (Catalogue No. 67-503) and more recent statistics in the annual report *Canadian Balance of International Payments and International Investment Position* (Catalogue No. 67-201). Additional detailed material will be found in the annual report under the Corporations and Labour Unions Returns Act.

of the United States investment in Canada at the end of 1963 was accumulated since 1955. At \$20,488,000,000, United States investments in the later year continued to represent more than three quarters of all non-resident investments in Canada and made up 80 p.c. of the increase since 1955. The main rise occurred in direct investments in companies controlled in the United States, which almost doubled in the 1955-63 period. In the same period, portfolio investments in Canada owned in the United States more than doubled, due mainly to large sales of new issues of securities made in that country.

British investments in Canada totalled \$3,331,000,000 at the end of 1963 and accounted for only about 14 p.c. of the total non-resident investments in Canada compared with 36 p.c. at the end of 1939 before most of the wartime repatriations. After growing each year from a low point in 1948 to 1962, the value of British investments in Canada declined slightly in 1963, reflecting in part Canadian repatriation of investments in railways and other utilities.

Investments of countries other than the United States and Britain reached a record total of \$2,384,000,000 at the end of 1963. Exceeding four times the 1953 figure, this represented a much higher rate of increase than had occurred in either United States or British investments and large increases had taken place in portfolio holdings of securities as well as in direct investments. At about 9 p.c. of the total, compared with 5 p.c. in 1953, this group of countries, mostly in Western Europe, accounted for a slightly smaller proportion of total foreign investments than in 1960 and 1961. Over 90 p.c. of the direct investments, which totalled \$943,000,000 in 1963, also came from Western Europe; more than one quarter was of Netherlands origin, with Belgian, French, Swiss and German investments making up the next largest groups.

The degree of dependence upon non-resident capital for financing Canadian investment has been relatively much less in the postwar period than in the earlier periods of exceptional expansion, even though the rise in non-resident investments has been so great. Thus, from 1950 to 1955 the net use of foreign resources amounted to about one fifth of net capital formation in Canada, and direct foreign financing amounted to about one third. But from 1956 to 1960 when these ratios had increased considerably to 33 p.c. and 45 p.c., respectively, they were still less than the corresponding ratios in the 1929 to 1930 period when inter-war investment activity was at its highest point. In that shorter period more than one half of net capital formation was financed from outside of Canada, and in the period of heavy investment before World War I an even larger ratio of investment was financed by external capital. In considering these changes it should be noted that for a decade and a half, between 1934 and 1949, Canada was a net exporter of capital and that Canadian assets abroad have been rising over a long period.

It should also be noted that the above ratios relate to the place of non-resident investments in all spheres of development including those where Canadian sources of financing predominate such as in merchandising, agriculture, housing, public utilities and other forms of social capital. Thus, non-resident financing of manufacturing, petroleum and mining has been much higher than the over-all ratios indicate and has provided the major portion of the capital investment in this field in the period since 1948. The most recent comprehensive calculation of the ratios of non-resident ownership in Canadian manufacturing, mining and petroleum is for the year 1962 and it should be noted that subsequent changes may have increased non-resident ownership even more. In that year the Canadian manufacturing industry was 54 p.c. owned by non-residents but capital subject to foreign control was 60 p.c. These proportions compared with 47 p.c. and 51 p.c., respectively, as recently as the end of 1954. In the field of petroleum and natural gas, non-resident ownership and control amounted to 63 p.c. and 74 p.c., respectively, at the end of 1962 whereas at the end of 1954 non-resident ownership and control had amounted to 60 p.c. and 69 p.c., respectively; in mining and smelting, non-resident ownership and control amounted to 63 p.c. and 58 p.c., respectively, compared with 53 p.c. and 51 p.c. in 1954. However, resident-owned Canadian capital continued to play a leading role in the financing

of such areas of business as merchandising, railways and other public utilities. Hence non-resident ownership in a broad range of business activity, including manufacturing, petroleum, mining, merchandising and railways and utilities, rose only slightly from 32 p.c. in 1948 to 35 p.c. in 1962. But, in the same years, companies subject to non-resident control increased from 25 p.c. to 34 p.c. their share of the total even in this broad area of business, a trend also evident in many subdivisions of the manufacturing and extractive industries.

Another basis of judging the place of foreign-controlled business in Canadian industry is provided by a special study of production and employment in the larger Canadian manufacturing establishments controlled in the United States. The enterprises having an investment in Canada of \$1,000,000 or more accounted for about 30 p.c. of Canadian manufacturing production in 1953 and 21 p.c. of employment in that field. These ratios in non-resident-controlled plants were considerably higher than in 1946—the previous year for which a study of this kind was made. In some industries the proportions of production and employment in plants controlled in the United States were much higher than this. Automobiles, for example, are mainly produced in United States-controlled plants, but this is exceptional. Among other industries where well over one half of the production is in United States-controlled firms are the smelting and refining of non-ferrous metals, petroleum refining, rubber products and motor vehicle parts. In several major industries like electrical apparatus and supplies and non-ferrous metal products, the distribution of control between Canadian and United States-controlled companies is more even. In other industries the non-resident share is large although less than one half the total. These include pulp and paper, other paper products, chemicals, medicinal and pharmaceutical products, sheet-metal products and certain branches of the machinery industry.

There are, however, many industries where the largest part of production is in Canadian-controlled plants. Prominent among these are such important branches of industry as primary iron and steel and some other subdivisions of the iron and steel industry, textiles, clothing, and such divisions of the food and beverage group as bakery products, beverages and dairy products. But even in some of these industries changes of ownership and control have been occurring in recent years.

Data collected under the Corporations and Labour Unions Returns Act (CALURA) provided further insight into the place of non-resident-owned corporations in the Canadian economy in 1962. The proportion of assets of reporting corporations in mining and manufacturing held by corporations more than 50 p.c. non-resident owned was 65 p.c. in mining and 77 p.c. in primary processing (reaching 99 p.c. in petroleum and coal products); for this group as a whole it was 71 p.c. In other primary manufacturing it was 37 p.c., ranging between 85 p.c. for tobacco and 13 p.c. for beverages. In secondary manufacturing the proportion of assets of reporting corporations held by corporations more than 50 p.c. non-resident owned was 62 p.c., ranging from 92 p.c. for rubber products to 11 p.c. for printing and publishing. In other industrial groupings the proportions ranged between 35 p.c. for wholesale trade and 11 p.c. for gas and electric utilities, with finance, retail trade, construction, transportation and other industries falling in between. It may be noted, however, that in some of these industries significant proportions would be exempt from reporting under the provisions of the Act and these would tend to lower the percentage.

A wide variety of indicators reveal the importance in Canada of foreign-owned establishments. Among the companies reporting under CALURA in the size groups with assets of over \$25,000,000, more than half the profits were derived by corporations more than 50 p.c. owned by non-residents and, including smaller reporting corporations, their share was some 46 p.c.; in manufacturing and mining it was over 56 p.c. It should be remembered, however, that some industries have important Canadian-controlled units which are exempt from reporting.

Canadian Assets Abroad.—Although there has been a great growth in non-resident investment in Canada and in the balance of indebtedness of other countries, it will be noted that Canadian assets abroad, shown in Tables 18, 21 and 22, have continued to rise in value each year. These now equal a larger proportion of liabilities abroad than was the case before World War II, but more than one third of the increase since then has been in government-owned assets such as the official reserves and the loans by the Canadian Government to other governments which were extended during the war and early postwar years. At the end of 1963 the government credits outstanding had a value of \$1,285,000,000 while official holdings of exchange and Canada's net IMF position amounted to some \$2,700,000,000 in terms of Canadian dollars. Other official Canadian assets include Canada's subscriptions to the capital of the International Bank for Reconstruction and Development, the International Development Association and the International Finance Corporation which, by March 1964, amounted to \$80,500,000, \$32,800,000 and \$3,500,000, respectively; these were partly offset by liabilities to these institutions.

The portion of the assets in private investments, particularly in the form of direct investments abroad by Canadian companies, is still small in relation to the corresponding non-resident stake in equities in Canada. Private long-term investments abroad by Canadians in 1963 were made up of direct investments of \$3,145,000,000 and portfolio investments of \$1,797,000,000. About two thirds of the privately owned investments were located in the United States. Direct investments in that country by Canadian businesses have grown rapidly and are found in many fields, among which the beverage and farm implement industries are particularly noteworthy.

Private investments in overseas countries are widely distributed. Somewhat more than one half of the total in 1963 were located in Commonwealth countries, with slightly more in Britain than in the remainder of the Commonwealth. Most of the direct investments in Britain were in industry, while in other Commonwealth countries investments in mining were of almost equal importance with those in industry. In foreign overseas countries the largest part is in the countries of Latin America where Canadian holdings in public utilities are substantial.

21.—Canadian Long-Term Investments Abroad, 1939-63

NOTE.—Excludes investments of insurance companies and banks (held mainly against liabilities to non-residents). Canada's subscriptions to international investment agencies, and miscellaneous investments (Table 18). Holdings of stocks are at book values as shown in the books of issuing companies; holdings of bonds are shown at par values. Foreign currencies are converted into Canadian dollars at current market rates. The series for portfolio investment was reconstructed in 1952 and is not strictly comparable with preceding years.

Section 6.—The Economic Council of Canada

The Economic Council of Canada, a Crown corporation established by Act of Parliament (SC 1963, c. 11) assented to on Aug. 2, 1963, is an independent economic advisory body with broad terms of reference. Its research, analysis and recommendations on a wide range of economic and social matters are designed to help governments and private groups in developing their own longer-term plans, programs and policies. The Council consists of 28 members appointed by the Governor in Council. Included are a chairman and two directors who serve on a full-time basis in their capacity as professional economists, and 25 part-time members who are representative of industry, labour, finance and commerce, agriculture and the other primary industries, and the general public. There are no officials or representatives of government among its members and the Council has no executive or administrative functions.

The central features of the Council's duties are "to advise and recommend . . . how Canada can achieve the highest possible levels of employment and efficient production in order that the country may enjoy a high and consistent rate of economic growth and that all Canadians may share in rising living standards; to recommend what government policies . . . will best help to realize the potentialities of growth of the economy; to consider means of strengthening and improving Canada's international financial and trade position; . . . to study how national economic policies can best foster the balanced economic development of all areas of Canada . . .". Such duties, and others stated in the Act, encompass the basic economic and social goals that have come to be widely accepted in all modern states. These aims usually are briefly stated as full employment, a high rate of economic growth, reasonable stability of prices, a viable balance of payments, and an equitable distribution of rising incomes. Since the Second World War, in a period of accelerating change, the consistent and simultaneous achievement of such objectives has become a major preoccupation of public policy. An increasing number of countries have sought to develop special procedures and machinery to facilitate the attainment of such goals. The creation of the Economic Council of Canada is a part of this development.

In its First Annual Review* the Council stated its underlying philosophy of approach in this way:

"We are concerned not with the question of inventing new forms of intervention, but rather with ordering and developing our policies and social programmes in a rational and coherent manner designed to accomplish consistently what the society has declared to be its economic and social goals. For this purpose it is essential to bring to bear the needs of the future on the decisions of today. This applies not only to decisions by governments but also to decisions in the private sector of the economy."

* Economic Council of Canada, *First Annual Review: Economic Goals for Canada to 1970*. Queen's Printer, Ottawa, December 1964. \$3.50 (Catalogue No. EC 21-1/1964).

In examining the potentialities of the Canadian economy to 1970, the Council in its *First Annual Review* said that the most striking single feature is the tremendous increase in Canada's labour force. The rate of increase in the 1965-70 period is expected to average 2.6 p.c. a year—a rate several times that anticipated in most European countries and well over that in prospect for the United States. Numerically, the Canadian increase would total about 1,000,000 workers in the 1965-70 period. This tremendous labour force growth was considered by the Council in the light of the goal of full employment. In no country does this goal mean that everyone in the labour force must be employed; there is always some voluntary unemployment as well as some that is unavoidable as workers move from one job to another. The Council concluded that 3 p.c. unemployment as an average annual rate would be a practical, realistic objective to be aimed at over the remainder of the 1960's, although it stressed that improved manpower policies (including better labour mobility and higher levels of education and skills) would make it possible to aim at a higher employment potential over the longer term. To attain the "full employment" objective in the face of the large labour force increase, Canada would require a net addition of 1,500,000 jobs in the seven-year period ending in 1970. This is approximately the same gain in total employment that occurred over the previous 14 years.

The Council also placed strong emphasis on increased efficiency—on sustained advances in productivity, which are the essence of economic growth and the real source of improvements in average living standards. Basing its judgment on postwar trends, the Council estimated that, with a reduction of the degree of slack existing in the economy in 1963, output per person employed would increase at an average rate of 2.4 p.c. a year over the period to 1970. This productivity potential was combined with the very rapid rate of expansion required in employment, averaging approximately 3 p.c. a year to 1970, to indicate a potential average rate of growth of output of 5.5 p.c. a year in real terms—that is, in terms of volume, after adjustment for price changes. The Council emphasized that its calculations of potential output to 1970 did not represent forecasts of anticipated trends but rather reasoned appraisals of consistent possibilities for the future. The achievement of such an average annual rate over the whole 1963-70 period would mean an aggregate increase of 50 p.c. in total real output and an increase of over 20 p.c. in real per capita income.

Examining the goal of reasonable stability of prices, the Council said that rates of change in prices and costs to 1970 within Canada's flexible market system should be contained within the limits of the range of movements over the decade from 1953 to 1963. Over this decade, for example, the average annual increases in consumer prices and in prices of all goods and services produced in Canada were 1.4 p.c. and 2.0 p.c., respectively, with some moderate year-to-year variations around these rates.

A "viable balance of payments" was taken by the Council to mean not merely the maintenance of a capability for attaining adequate total international receipts to cover international payments, but also to mean a strengthening of Canada's international economic position in the sense that the possible current account payments deficit (which might be of the order of \$1,500,000,000 to \$2,000,000,000 at potential output in 1970) would be lower in relation to total output (and also that the corresponding net capital inflow would be smaller in relation to domestic investment) than has been the case under comparable past conditions of rapidly rising domestic activity. In short, such a performance would call for some improvement in the basic competitive posture of the Canadian economy.

To meet its interrelated goals and targets, the Council called for an appropriate combination of expansionary measures and policies in the fiscal, monetary and trade fields. In particular, the achievement of its goals would require Canada to participate fully in the new possibilities for an expansion of world trade. There was also a requirement for more adequate measures to facilitate the necessary mobility of productive resources from declining to expanding situations within a rapidly changing economy.

Economic Performance in Relation to Goals

In its *Second Annual Review** published in December 1965, the Council appraised Canada's progress toward the attainment of these basic goals. After considering many factors, the Council's main conclusion was that the Canadian economy moved toward consistently higher standards of performance over the first half of this decade. However, by 1965, following a strong and sustained over-all expansion, some questions arose regarding the possible emergence of imbalances, pressures and distortions which might undermine the economy's capacity for maintaining these standards of performance into the future. In this perspective the Council appraised certain special areas of concern:—

Investment.—In its *First Annual Review*, the Council indicated that, to attain potential output by 1970, the volume of total business fixed investment would have to increase at an average rate of about 10 p.c. a year. In 1963-65 this investment increased by some 16 p.c. a year—a rate of increase which is not sustainable on a long-term basis to 1970 and beyond, the Council observed. During 1965, concern developed about the possibility of severe pressures, especially in the construction industry where shortages of skilled workers appeared along with scattered evidence of strains on capacity. Some cost and price pressures also emerged. The Council saw a need for a somewhat slower rate of advance in construction activity, supported by more vigorous and effective efforts to enlarge the manpower resources and capacity of the construction industry. This underlined the more general need for an appropriate and effective means of facilitating adequate mobility, training and retraining of manpower—a conclusion that had a broader application than in the construction industry alone.

Labour Market Conditions.—There was increasing evidence in 1965 of shortages of manpower in a widening range of occupations and skills and in a growing number of localities. One of the dangers of this kind of situation is that if the shortages become severe before the over-all level of unemployment has been reduced to a satisfactory low level they will spawn cost and price pressures that will be transmitted to other parts of the economy. It was for this reason that the Council in 1964 emphasized the urgent need for improved labour-market and manpower policies. The Council said its view was reinforced by developments in 1965, when the economy appeared to have begun to encounter certain elements of severe labour shortages while the over-all rate of unemployment, although substantially reduced from earlier years, was still around 4 p.c.

Prices.—The Government in 1965 asked the Economic Council to examine the relationships between prices, costs, productivity and incomes in the context of sustained high standards of performance in the economy. The Council expected to report on these issues in 1966. Meanwhile, in its *Second Annual Review*, the Council observed that price increases in Canada in 1965 were slightly above the average annual rates of increase in 1953-63, which the Council had indicated should be the average standard of performance within which price increases should be contained over the 1963-70 period as a whole. However, the Council said that a careful appraisal of the available information regarding the nature and patterns of the 1965 changes suggested little evidence that a broad and widely dispersed acceleration of price increases or accentuation of price pressures was then under way. However, it added that price and cost developments warranted much closer scrutiny and appraisal under conditions in which the economy was operating closer to its current potential.

Exports and Imports.—Canadian export performance improved significantly in 1960-65. The most dramatic and encouraging improvement was in exports of highly manufactured products. These increased in volume by an average of 26 p.c. a year over the 1960-65 period, compared with a rate of 7 p.c. in 1955-60 and an annual rate of only 2 p.c. in 1950-55. However, considering exports as a whole and in longer perspective, the Council judged Canadian export performance to be not entirely encouraging when

* Economic Council of Canada, *Second Annual Review: Towards Sustained and Balanced Growth*. Queen's Printer, Ottawa. December 1965.

compared with the record of other countries. The share of Canadian exports in relation to world trade has tended to decline from the very high level in the early postwar period. The Canadian share fell from 4.7 p.c. in 1955-59 to 4.3 p.c. in the first half of the 1960's, although there was a slight increase in the share in 1964. The Council said sustained and effective efforts are required in both export performance and import-competing performance in Canadian industry if potential output were to be attained and maintained. It called on business to give high priority to these requirements which go hand in hand with adequate development of specialization and productivity and sustained strong industrial growth. The Council also said that government should facilitate such success in the business community by adapting and developing policies deliberately aimed at strengthening Canada's trade performance, particularly in non-agricultural products.

The most important current problem is to achieve and maintain adequate productivity growth, the Council said. This is the key to economic growth and to rising living standards for Canadians. It is also an important factor in maintaining reasonable price and cost stability and a satisfactory international competitive posture. Even the goal of sustained high employment ultimately depends on adequate productivity growth, especially in relation to the United States. Without adequate productivity gains in Canada, imbalances and distortions would sooner or later appear to undermine employment.

Sources of Economic Growth

Successive economic studies, especially in the industrially advanced countries, have shown that total increases in the output of an economy can only be partly attributed to the increase in the quantity of a nation's economic resources (labour, capital, land and natural resources). These studies typically reveal a large 'residual' which must be accounted for by a second set of factors. These include the improvement in the quality of productive resources (such as levels of education and skill), together with the growth in the efficiency with which these resources are combined (including the application of new technology, better organization and production, shifts from less to more productive employment of labour and other resources, and increased specialization and scale of production). An important part of the Council's *Second Annual Review* constituted a preliminary exploration of the roles and relative importance of some of the complex forces affecting Canadian economic growth.

The Council approached its task partly by comparing differences in real per capita income between Canada and the United States. The current gap in output and in money income per person between Canada and the United States suggested that although average per capita incomes in Canada have increased considerably during this century, they have remained persistently and substantially below the U.S. averages. The analysis suggested that, in 1964, average Canadian income was at least 25 p.c. below the U.S. level. Since the over-all averages of current price levels in the two countries appeared to be fairly close together, the Council assumed that differences in the average levels of *money* income between the two countries could be taken as an approximate measure of the differences in the average levels of *real* income.

It was not possible to provide a comprehensive and precise measure of the relative importance of the many factors involved in the differences. However, the role and contribution of at least some of these factors were suggested. For example, Canada has recently had a much lower percentage of its population in the labour force, and an even lower percentage of employment in relation to total population. One reason for this is the relatively lower proportion of people of working age in Canada, especially as the result of the exceptionally high postwar birth rates in Canada. Another reason is the lower

participation rate among those of working population age, especially as a consequence of the very much lower participation of women in the Canadian labour force—only 32 p.c. in Canada in 1960 compared with over 43 p.c. in the United States.

Thus, although the difference in real income per capita between Canada and the United States is in excess of 25 p.c., the real income difference per person in the labour force or per employed person between the two countries is less than 20 p.c. In other words, although average per capita income (and hence the average standard of living) in Canada is more than one quarter below the United States, average productivity in Canada is less than one fifth lower. This is partly due to Canada's relatively greater use of capital facilities and land and natural resources. But these are not sufficient in themselves to assure the attainment of high productivity and high standards of living.

The main explanation for the differences in productivity between the two countries must lie in the differences in the quality of productive resources and the efficiency with which they are used. In this respect many possible comparisons between the two countries could be suggested—levels of education and skill; resource mobility, including the mobility of manpower; technological advances; organization of production; industrial scale and specialization; industrial initiative, enterprise and competition; the attitudes and energy of both workers and management; environmental and institutional influences such as geography, climate and government; population growth and density; and industrial and regional structure. Many of these factors were examined at length by the Council. However, one of the most important factors which the Council assessed—and one which is likely to become much more important over the next two decades—was the over-all differences between the two countries in the average educational levels of their labour forces. The crucial importance of education in economic growth is underlined by the fact that about 75 p.c. of all income in the economy accrues to labour, the remainder arising out of the ownership of property.

Education and Economic Growth

The basic role of education as a factor contributing to economic growth and rising living standards was stressed in the Council's *First Annual Review*, especially in the discussion of Canada's vital need for creating and maintaining an adequate supply of professional, technical, managerial and other highly skilled manpower as a basis for future growth. The *Second Annual Review* attempted a closer examination of education as a factor in growth. The Council recognized that its work in this difficult area was in the nature of a pioneering venture, but considered it useful to make some initial findings and conclusions:—

Average years of education per person in the male labour force rose rapidly and fairly steadily from 1910 to 1960 in the United States, with gains of 9 to 10 p.c. in each decade over that half century. The Canadian increases were somewhat more uneven and were also consistently below those in the United States. Consequently, it is estimated that although average years of schooling increased by less than 40 p.c. in Canada, the comparable increase in the United States was about 60 p.c. There has thus been a widening educational gap between the two countries. This gap appears to have widened particularly at the secondary school level in the inter-war years, and particularly at the university level in the postwar period. For example, in 1960 about 45 p.c. of the United States male labour force had four years of high school or more education, compared with only 24 p.c. in Canada in 1961.

The Council estimated that the Canada-U.S. differences in the average educational attainments of their respective labour forces account for approximately one third of the difference in productivity between the two countries. The Council's analysis also suggested a strong relationship between individual income levels and educational attainments. For example, in Canada the average income of those who have completed four to five years high school is more than one and a half times the average of those who have only elementary school education; and those who have university degrees have an average income which is more than two and a half times the average of those with only elementary school education, and more than twice the average of those who have only one to three years of high school.

A rough estimate of the 'profitability' of education can be made by calculating the extra income which on average is associated with a higher level of education, against the extra outlays and costs involved in obtaining such an education. On the basis of such calculations, it was estimated that returns on the 'human investment' in high school and university education in Canada are in the range of 15 to 20 p.c. a year. This is a somewhat higher rate of return than has been calculated for the United States.

The benefits from increased education, according to certain calculations and assumptions, are estimated to have accounted for a share in the general order of one quarter of the *increase* both in the average standard of living and in the productivity of Canadians from 1911 to 1961. Although this is a large contribution, it is apparently substantially lower than that indicated in comparable estimates for the United States.

Canada now faces a general shortage of manpower with higher educational attainments. The shortages extend from the high school level on up, and are most severe at the professional and university level. These deficiencies in the supply of skills constitute one of the major obstacles to be overcome in achieving a satisfactory rate of improvement in productivity and of economic growth in Canada.

The future benefits from increased efforts in education are very large, and the economic returns to the nation from increased investment in education are likely to exceed by a considerable margin those from most other types of expenditure. This economic gain is complementary to the contribution of education to the human, social and cultural development of individuals.

In the light of these findings, the Council recommended that the advancement of education at all levels be given a very high place in Canadian public policy, and that investment in education be accorded the highest rank in the scale of priorities. In particular, the Council urged that immediate attention be given to:—

- (1) The rapid and substantial expansion of post-secondary education in all parts of Canada. The aim should be to provide a ready opportunity for higher education to every qualified Canadian student so that financial obstacles will be eliminated as a barrier to higher education. A substantial increase in funds for research is a necessary feature of expanded and improved education at the higher levels.
- (2) The closing of the remaining gaps in school facilities and professional resources at the secondary school level so that such education is a real and practical possibility for all Canadian children.
- (3) The development and implementation of greatly expanded programs to upgrade and bring up to date the education and skill qualifications of the existing labour force, including professional workers and management. Continuing education and retraining must play an ever-increasing role in the future.
- (4) Social and other measures to reduce drop-outs in high school to achieve a much higher rate of high school completions.
- (5) Vigorous efforts through research, the use of new techniques, and upgrading the qualifications of teachers to improve the quality and methods of education.
- (6) Closer co-operation between business, labour and the educational system, along with improved counselling of students, regarding future manpower needs and the most effective ways of meeting these needs.

Regional Growth and Disparities

The problem of assuring an appropriate participation on the part of each region in the over-all process of national economic development has long been an elusive goal and a continuing concern of the people of Canada. The Council's analysis showed that over the past four decades there has been relatively little progress toward the achievement of a better balance in this respect. Despite various policies and programs, very wide disparities have continued to exist in average per capita income. Also, there have continued to be wide differences in the extent to which the human and material resources of each region have found opportunities for productive use. While national prosperity has always tended to have a favourable influence everywhere, rapid national growth has not by itself served to bring about any significant or lasting reduction in these large and stubborn differences.

Regional levels of personal income per capita (in current dollars) are shown for three selected groups of years in the following statement. Provinces are ranked in order of level of income in 1963 and the data are for three-year averages centred on the year shown.

<u>Province</u>	<u>1957</u>	<u>1947</u>	<u>1963</u>
	\$	\$	\$
Ontario.....	509	981	2,025
British Columbia (incl. the Yukon and Northwest Territories).....	535	980	1,966
Alberta.....	509	923	1,750
Saskatchewan.....	449	818	1,749
Manitoba.....	455	875	1,721
Quebec.....	378	709	1,521
Nova Scotia.....	299	676	1,302
New Brunswick.....	277	609	1,167
Prince Edward Island.....	248	477	1,115
Newfoundland.....	1,009
PROVINCIAL AVERAGE.....	407	783	1,532

The most striking features of the above comparisons are the substantial percentage difference in income levels between the highest and lowest province and the fact that the rankings of the provinces in terms of income levels have hardly changed over a period of almost 40 years.

The Council explored a number of underlying factors which help to explain why disparities exist in Canada and how they have changed over time. The following summary perspective was offered.

The Atlantic Provinces.—Although there are important distinctions among them, the four Atlantic Provinces clearly constitute the region with the lowest levels of per capita income in Canada and the area which has participated least adequately in the over-all national economic growth. In this sense the Atlantic Region is the 'under-developed region' of Canada, with a particularly unfavourable set of economic circumstances and characteristics.

First, the proportion of its population normally engaged in productive activity is lower than in other areas of the country. This fact alone would appear to account for roughly half of the gap in income per person between the region and the Canadian average. Contributing to this lower utilization of manpower resources are such factors as a relatively smaller proportion of total population in the working age group of 15-65 years, lower rates of participation in the labour force, higher-than-average unemployment and relatively severe seasonal unemployment. In addition, the general educational level of the labour force is below that of other regions and a larger proportion of the population live and work in rural areas where incomes are typically lower than in urban areas. Over the postwar period for which data are available, the rate of capital investment per capita has been well below the Canadian average. Regional public expenditure on growth-related services—including education, health, transport and resources development—has been consistently and substantially lower than in other Canadian regions. These conditions have also been reflected in high and sustained rates of migration of people from the area and in a rate of growth of employment slower than in the rest of Canada. These are the symptoms of a region in a low-level 'income-trap' and the breaking-out from that trap poses a formidable challenge to national policies for regionally balanced economic development.

Quebec.—Income levels per person in Quebec fall somewhat below the average for Canada. Manpower utilization is about 5 p.c. below the national level, mainly because of lower-than-average participation in the labour force and higher-than-average unemployment. Earnings per employed person also fall about 7 p.c. below the national level. It is not easy to isolate the basic contributing causes but lower levels of educational attainment in the labour force and a longer-run lag in investment in both the private and public sectors

of the regional economy undoubtedly have played a part. It is also true that, to a greater extent than in most of the other provinces, Quebec faces a difficult problem of securing sub-regional balance.

In terms of regional income growth, however, Quebec's performance has been well above the Canadian average. Indeed, since 1950, rising levels of income per person in this province have been a powerful force in reducing inter-regional income disparity in Canada. Employment has grown almost as rapidly as in Canada as a whole. Internal migration from rural to urban areas and occupations has also been an important factor in the over-all development of Quebec's economy, especially in the postwar period.

Manitoba and Saskatchewan.—These two Prairie Provinces have important distinguishing features. They are essentially similar, however, with respect to income levels and related economic characteristics, in which they rank somewhat above the average for Canada. Manpower utilization is at or above the national level because participation in the labour force is relatively high and the rate of unemployment is the lowest in the country. Seasonal unemployment associated with agriculture, however, is large. Indeed the importance of agriculture in both economies, but particularly in Saskatchewan, is an overriding influence which affects their economic status in relation to the other regions.

Earnings per employed person average close to the national level, although the relatively high concentration of employment in agriculture exerts a general downward pull. The shift out of this primary industry has involved a replacement of labour by capital on the farm and high rates of migration both to urban areas and to other provinces. Educational attainment in the labour force approximates the national average. Rates of investment per capita have been favourable and, in Saskatchewan particularly, the development of new mineral resources has diversified the productive capacity of the province. In these ways productivity and income per capita have been successfully maintained at or above the Canadian average. Nevertheless, total regional income and employment have increased relatively slowly because a highly mobile population has been attracted away by superior employment alternatives in the most rapidly expanding areas of the country. Consequently, a more rapid and sustained rate of regional growth and participation in national economic development will depend upon the provision of suitable employment opportunities involving high productivity and income within these regions.

Ontario, Alberta and British Columbia.—Although all three provinces have clearly distinguishable economic characteristics, in recent decades they have maintained a consistent standing at or near the top of the regional ranking of personal income per capita. Manpower utilization is higher than average in Ontario and Alberta, with favourable population age structures, high labour force participation rates and low unemployment. These factors are less favourable in British Columbia but their effects are offset by the exceptionally high rate of earnings per person employed—19 p.c. greater than the national average.

In all three provinces, educational attainment in the labour force and educational investment are advanced and rates of new investment have been well above average. In the range of factors the Council was not able to measure statistically—resource endowment, scale of enterprise and the stimulus of urban agglomeration, location and the use of advanced technology—these regions are relatively more favoured than most other provinces. With all these characteristics contributing to rapid growth in employment, population and total income, these regions have participated very strongly in national economic development. At the same time, to a greater extent than elsewhere, these regions have been confronted with problems associated with a sharp increase in the concentration of people and

economic activity—problems such as urban congestion, the optimum use of land, and the provision of services and facilities required to accommodate rapid urban growth. The solution to these problems clearly entails heavy capital investment and far-reaching, complex changes in the institutional framework to enable it to adapt to new needs.

The Council concluded that efforts to promote more regionally balanced growth should be aimed at achieving a more rapid increase in the incomes of the lagging regions by methods which do not retard the development of the faster-growing areas of the country. In this way the economic growth of the national economy would be improved for the benefit of all regions in Canada. The Council said that, in order to accomplish this result, it is essential that regional development policies be directed to two basic objectives—the increase of opportunities for high-productivity employment and the acceleration of programs which can make the maximum contribution to improvements in productivity generally in the region. The Council suggested the following guidelines for action:—

- (1) the avoidance, as far as possible, of subsidies merely to create temporary activity or to sustain indefinitely low-productivity industries and declining occupations;
- (2) encouragement of efficient agglomerations of activity—growth centres—within the different regions in order to achieve increasing economies of scale, larger markets and more useful pools of skills, and to avoid uneconomic scatter and dispersion;
- (3) the taking of decisions in respect of investments in social capital in accordance with an adequate consideration of the economic and social benefits to be obtained in relation to costs;
- (4) the recognition of the urgent need to make available additional financial resources to the governments of the lower-income regions and through the appropriate federal agencies in order to help break the vicious circle of low productivity, low incomes, low government revenues and low investments in growth-promoting services which are needed to improve the quality and effective utilization of the available human and material resources—in particular, education, training, research, health, transport facilities, resource and industrial development and the development of wider markets;
- (5) the necessity for close co-ordination in the formulation and implementation of consistent regional development policies and programs among all levels of government; this is particularly important in view of the wide range of programs and policies affecting regional development, both on the part of the provinces and through certain federal agencies such as the Atlantic Development Board, the Area Development Agency and the Agricultural Rehabilitation and Development Administration; and
- (6) the avoidance of self-defeating restrictive and divisive measures which interfere with the free flow of goods, capital, labour and enterprise between all the provinces; such measures must be avoided if we are to achieve simultaneously the twin goals of more satisfactory growth in every region and a rapid expansion of the national economy from which all would benefit.

The Council observed: "It is clear that the narrowing of inter-regional income disparities and the achievement of a more regionally balanced economic growth involve large, urgent, and especially challenging tasks. Many decades of experience have shown that these tasks cannot be accomplished by piecemeal expenditures, superficial expedients, unproductive works and mere transfers of income. The appropriate policies and programmes will need to be formulated within a long-run consistent framework and carried out with a continuing regard for the real and underlying problems involved."

In addition to the research and analysis of economic prospects and problems carried out by its own expert staff, the Council also draws upon the work of other public and private institutions and assigns consultants to conduct special studies. In addition, liaison is maintained with existing provincial economic and productivity councils and boards. Members and staff of the Council also have participated in a large number of meetings to discuss the Council's work with interested groups and with business, labour and university economists.

The Council also has commissioned specialists in their respective fields to undertake studies for conferences on various subjects. These include the National Conference on Labour-Management Relations held in Ottawa in November 1964, the Conference on Productivity Through New Technology in Toronto in May 1965, the Conference on Stabilization in London, Ont., in the late summer of 1965, and the Conference on International Trade and Canadian Agriculture in Banff, Alta., in January 1966. Papers from these conferences, as well as other staff and special studies for the Council, have been published and are available from the Queen's Printer, Ottawa. In addition, the Council has published a special report on incentives for industrial research and development, prepared by its Advisory Committee on Industrial Research and Technology.

Section 7.—The Atlantic Development Board

The persistence of the problems of slow growth and low income in the Atlantic region compared with the remainder of Canada has long been of concern to the Federal Government as well as to the governments of the Atlantic Provinces. Policies and programs introduced over the years in an effort to better economic conditions were not entirely successful for various reasons and recently it became imperative that new solutions should be sought and the traditional patterns of economic activity in this area modified. Among the changed approaches was the establishment by the Federal Government of the Atlantic Development Board in 1962 (SC 1962-63, c. 10, as amended by SC 1963, c. 5).

The Board incorporates three essential principles in regional economic development: joint and closely co-ordinated development of programs with the governments of the Atlantic Provinces; a concern with the basic structure of the regional economy and with problem causes rather than symptoms; and, where otherwise not available, federal financial assistance for development projects.

The Board is a special agency, distinct from the regular machinery of government. Its eleven members are appointed for fixed periods from all the Atlantic Provinces and from diverse fields of activity. It thus has the knowledge, the interest and the freedom to pioneer regional development. Headquarters of the Board are in Ottawa and the staff consists of 37 persons of whom about half are professional. The staff is organized into two functional Divisions—the Program Division is concerned with all aspects of Board projects including economic and engineering investigations and the carrying out of the projects themselves; the Planning Division is responsible for, in consultation with the Economic Council of Canada, the preparation of a co-ordinated plan for the promotion of the growth of the Atlantic region. For obvious reasons, the staff works very closely with officials of other departments and agencies. Each province has a regional committee which works with the Board staff on matters relating to that particular province. When projects are approved, the appropriate department or agency is requested to supervise the work and arrange administrative details on the Board's behalf. Ministers or officials from each of the four provincial governments are designated to act as liaison officers with the Board.

Very broadly, the Board's functions are to prepare a co-ordinated plan for the promotion of the economic growth of the Atlantic region and to recommend programs and projects to cope with or mitigate current problems. In carrying out these functions, the Board is acutely conscious of the interdependence of short-run and long-run policies and the need for consistency among them. Economic growth and development, particularly when based on increased industrial activity, require substantial investment in capital facilities for power, transportation, pure water for industrial purposes, and other services. These facilities, commonly referred to as 'infrastructure', are of basic importance and, for this reason, major emphasis has been placed on this type of investment. Since the construction of such facilities could not be financed by the Atlantic Provinces themselves at this time and on the necessary scale, the Federal Government, in July 1963, established a \$100,000,000 Atlantic Development Fund which, along with annual appropriations, will enable the Board to carry out its functions.

By Mar. 31, 1965, projects costing an estimated \$57,660,000 had been approved and expenditures of \$3,642,509 had been made against that amount, leaving outstanding commitments of \$54,017,491. The projects are as follows:—

PART I.—BANKING AND OTHER COMMERCIAL FINANCE

Section 1.—Banking

Subsection 1.—The Bank of Canada*

The Bank of Canada is Canada's central bank. It was incorporated under the Bank of Canada Act in 1934 and commenced operations on Mar. 11, 1935. The Act of Parliament which established the central bank charged it with the responsibility for regulating "credit and currency in the best interests of the economic life of the nation", and conferred on it certain specific powers for discharging this responsibility. Through the exercise of these powers, the Bank of Canada determines broadly the combined total of the basic forms of Canadian money held by the community—currency outside banks plus deposit balances in chartered bank accounts.

By virtue of the provisions of the Bank of Canada Act, which enable the central bank to increase or decrease the total amount of cash reserves available to the chartered banks as a group, the Bank of Canada is able to determine broadly the over-all level of the total assets and deposit liabilities of the group, and hence of the combined total of currency and bank deposits. The Bank Act requires that each chartered bank maintain a minimum amount of cash reserves in the form of deposits at the Bank of Canada and holdings of Bank of Canada notes. This minimum requirement is 8 p.c. of the bank's total Canadian

* Revised by the Research Department of the Bank of Canada.

dollar deposit liabilities on a monthly average basis. The ability of the chartered banks as a group to expand their total assets and deposit liabilities therefore depends on the level of total cash reserves. An increase in cash reserves will encourage the banks to expand their total assets (which consist chiefly of loans and marketable securities) with a concomitant increase in deposit liabilities; a decrease in cash reserves will bring about a decline in their total assets and deposit liabilities as they seek to restore their cash reserve ratios.

The chief method by which the Bank of Canada can affect the level of cash reserves of the chartered banks and through them the total of chartered bank deposits, is by purchases and sales of government securities. Payment by the central bank for the securities it purchases in the market adds to the cash reserves of the chartered banks as a group and puts them in a position to expand their assets and deposit liabilities. Conversely, payment to the central bank for securities it sells causes a reduction in reserves of the chartered banks and makes it necessary for them to reduce their assets and deposit liabilities.

The influence that the Bank of Canada has on credit conditions and hence on economic behaviour stems from its ability to determine broadly the level of total holdings of currency and chartered bank deposits. The trend of total holdings of these forms of money can have an influence on liquidity generally, including effects on interest rates and bond prices and the availability of credit, and on expectations regarding future financial and economic trends, all of which have some effect on decisions to spend or to save. However, many factors other than changes in the money supply also have important influences on financial and economic developments, such as: the state of economic conditions and prospects outside Canada; the competitive strength of Canadian business enterprises both at home and abroad; the character of the investment decisions and price and wage policies in domestic industries; the skills and degree of mobility of labour; and the nature of public policies at all levels of government with regard to such matters as expenditure, taxation, subsidies and the regulation of industry. In forming its judgments, the Bank of Canada is bound by criteria laid down by Act of Parliament in the preamble to the Bank of Canada Act of 1934. Its operations must be based, not on any simple mechanical formula, but rather on continuous observation and appraisal of the constantly changing state of the economy as reflected in the complex pattern of economic and financial developments.

Although the Bank of Canada has the power to determine the combined total of currency and chartered bank deposits, it has no means of determining how much of this total is held in the form of currency and how much in the form of chartered bank deposits. That depends on the wishes of the public, since deposits can be converted freely into notes and coin and back again. Nor does the Bank have any direct control over the growth of other forms of money or of close substitutes for money as a store of wealth in liquid form, of which there are many varieties in Canada—mainly deposit balances in savings institutions other than chartered banks and short-term securities issued by governments and corporations.

The cash reserve system in Canada, which is similar to that in a number of other countries, while placing the central bank in a position where it can determine within broad limits the total amount of chartered bank assets and deposits, leaves the allocation of bank credit and other forms of credit to the private sector of the economy. Each chartered bank can attempt to gain as large a share as possible of the total cash reserves by competing for deposits. Each bank determines how its assets will be distributed, for example, between various kinds of securities and loans to various types of borrowers. The Bank of Canada has no power to direct banks or other lenders to make funds available to certain groups or in certain regions on the same terms or on different terms than to other groups or in other regions. The influence of the central bank—based in essence on its power to expand or contract chartered bank cash reserves through its market purchases or sales of securities—is both indirect and impersonal and is brought to bear on financial conditions generally through the chartered banks and the numerous inter-connected channels of the capital market.

The powers of the Bank are set forth in the Bank of Canada Act, 1934 (RSC 1952, c. 13), revisions in which were made in 1936, 1938 and 1954. Some of these powers are outlined in the 1965 Year Book at pp. 1031-1032.

The Bank is under the management of a Board of Directors composed of a Governor, a Deputy Governor and twelve Directors. The Governor and Deputy Governor are appointed for terms of seven years each by the Directors, with the approval of the Governor General in Council. The Directors are appointed by the Minister of Finance, with the approval of the Governor General in Council, for terms of three years each. The Deputy Minister of Finance is a member of the Board but does not have the right to vote. There is an Executive Committee of the Board composed of the Governor, the Deputy Governor, one Director and the Deputy Minister of Finance (who is without a vote) which has the same powers as the Board except that its decisions must be submitted to the Board at its next meeting. In addition to the Deputy Governor who is a member of the Board, there may be one or more Deputy Governors appointed by the Board of Directors to perform such duties as are assigned by the Board.

The head office of the Bank is at Ottawa. It has agencies at Halifax, Saint John, Montreal, Ottawa, Toronto, Winnipeg, Regina, Calgary and Vancouver and is represented in St. John's and Charlottetown.

The Industrial Development Bank.—The Industrial Development Bank, a subsidiary of the Bank of Canada, was incorporated by Act of Parliament during 1944 and its banking operations commenced on Nov. 1, 1944. Its functions are described in the preamble to the Act as follows:—

"To promote the economic welfare of Canada by increasing the effectiveness of monetary action through ensuring the availability of credit to industrial enterprises which may reasonably be expected to prove successful if a high level of national income and employment is maintained, by supplementing the activities of other lenders and by providing capital assistance to industry with particular consideration to the financing problems of small enterprises."

The President of the Industrial Development Bank is the Governor of the Bank of Canada and the Directors are the Directors of the Bank of Canada and the Deputy Minister of Trade and Commerce. The authorized capital of the Bank is \$50,000,000 and it may also raise funds by the issue of bonds and debentures provided that its total direct liabilities and contingent liabilities in the form of guarantees and underwriting agreements do not exceed five times the aggregate of the Bank's paid-up capital and Reserve Fund.

The Bank may extend financial assistance to industrial enterprises in Canada which, by definition in the Act, include any industry, trade or other business undertaking of any kind. With respect to such enterprises the Bank is empowered to lend money or guarantee loans and where an enterprise is a corporation the Bank may also enter into underwriting agreements with regard to any issue of stock, bonds or debentures; acquire stock, bonds or debentures from the issuing corporation or any person with whom the Bank has entered into an underwriting agreement; and acquire certificates issued by a trustee to finance the purchase of transportation equipment. The total amount of commitments of the Bank, in the form of loans, guarantees, etc., in excess of \$200,000 each, may not exceed \$200,000,000.

The Bank may accept any form of collateral security against its advances, including realty and chattel mortgages which constitute the usual kind of security taken. The Bank is intended to supplement the activities of other lending agencies, not to compete with them, and the Act of Incorporation provides that it should extend credit only when, in the Bank's opinion, credit or other financial resources would not otherwise be available on reasonable terms and conditions. Its lending takes the form of fixed-term capital loans rather than current operating loans. The Bank is specifically prohibited from engaging in the business of deposit banking. It has branch offices in the following cities: St. John's, Halifax, Saint John, Moncton, Rimouski, Quebec, Trois-Rivières, Montreal, Ottawa, Toronto, Hamilton, Waterloo, London, Windsor, Sudbury, Port Arthur, Winnipeg, Regina, Saskatoon, Calgary, Edmonton, Kelowna, Vancouver, Victoria and Prince George.

¹ Includes investments; the change in loans outstanding does not equal the difference between disbursements and repayments because of year-end accounting adjustments.

Subsection 2.—Currency

Note Circulation.—The development by which bank notes became the chief circulating medium in Canada prior to 1935 is described in the 1938 Year Book, pp. 900-905. Those features of the development which then became permanent are outlined in the 1941 Year Book, pp. 809-810.

When the Bank of Canada commenced operations in 1935 it assumed liability for Dominion notes outstanding. These were replaced in public circulation and partly replaced in cash reserves by the Bank's legal tender notes in denominations of \$1, \$2, \$5, \$10, \$20, \$50 and \$100. Deposits of chartered banks at the Bank of Canada completed the replacement of the old Dominion notes of \$1,000 to \$50,000 denomination that had previously been used as cash reserves. The chartered banks were required under the Bank Act of 1934 to reduce gradually the issue of their own bank notes during the years 1935-45 to an amount not in excess of 25 p.c. of their paid-up capital on Mar. 11, 1935. Bank of Canada notes thus replaced chartered bank notes as the issue of the latter was reduced. Further restrictions introduced by the 1944 revision of the Bank Act cancelled the right of chartered banks to issue or re-issue notes after Jan. 1, 1945, and in January 1950 the chartered banks' liability for such of their notes issued for circulation in Canada as then remained outstanding was transferred to the Bank of Canada in return for payment of a like sum to the Bank of Canada.

Coinage.*—Under the Currency, Mint and Exchange Fund Act (RSC 1952, c. 315), gold coins may be issued in denominations of twenty dollars, ten dollars and five dollars (nine-tenths fine or millesimal fineness, 900). Subsidiary coins include: silver coins in denominations of one dollar, 50 cents, 25 cents, 10 cents (eight-tenths fine or millesimal fineness, 800); pure nickel five-cent coins; and bronze (copper, tin and zinc) one-cent coins. Provision is made for the temporary alteration of composition in event of a shortage of prescribed metals. A tender of payment of money in coins is a legal tender in the case of gold coins issued under the authority of Sect. 4 of the Currency, Mint and Exchange Fund Act for the payment of any amount; in the case of silver coins for the payment of an amount up to \$10; nickel coins for payment up to \$5; and bronze coins up to 25 cents.

5.—Canadian Coin in Circulation, as at Dec. 31, 1955-64

NOTE.—The figures shown are of net issues of coin. Figures from 1901 are given in the corresponding table of previous Year Books beginning with the 1927-28 edition.

¹ Tombac, a copper-zinc alloy, was used to conserve nickel for war purposes; no coins of this metal have been issued since 1944.

*The Royal Canadian Mint.**—The Mint at Ottawa was established as a branch of the Royal Mint under the (Imperial) Coinage Act 1870 and opened on Jan. 2, 1908. In 1931 (RSC 1952, c. 240) it was constituted a branch of the Canadian Department of

* Revised by the Master of the Royal Canadian Mint, Ottawa.

Finance and has since operated as the Royal Canadian Mint. Gold refining is the principal activity of the Mint. Fine gold produced from the rough bullion shipments received from the mines is purchased by the Mint and later delivered to the Bank of Canada for account of the Minister of Finance in bars of approximately 400 oz.t. each or, for those mines authorized to sell gold in the open market, the bullion is shipped according to instructions from the mines. The fine silver extracted from the rough gold is generally used for coinage purposes.

¹ Less total float, i.e., cheques and other items in transit.

² The deposit balances of religious, educational and welfare institutions and personal accounts used mainly for business purposes were reclassified from "personal savings deposits" to "other notice deposits" as at Sept. 30, 1957 in the returns of the banks to the Department of Finance; from that date the figures are thus not comparable with those for previous years. The amount of deposits reclassified was approximately \$140,000,000.

Subsection 3.—The Chartered Banks*

The Canadian commercial banking system consists of eight privately owned banks, chartered by Parliament and operating under the provisions of the Bank Act.† Of these eight, five are nation-wide institutions; two operate mainly in the Province of Quebec and in other French-speaking areas and one, affiliated with a New York bank, has branches in six large cities. At the end of 1964, these banks together operated 5,782 banking offices of which 5,575 were in Canada and 207 abroad. Thus, the chief distinguishing feature of the Canadian banking system is the relatively small number of large banks having an extensive network of branches, operating under a single legislative jurisdiction (the Federal Government) and under one detailed and comprehensive statute (the Bank Act).

Since the first banks were established during the first quarter of the nineteenth century, the commercial banking system has developed in response to the changing needs of the Canadian economy, an evolution which is still in rapid progress. Canadian economic development has been characterized by two main features—successive but by no means continuous periods of rapid geographical expansion of settlement, and a continued dependence on export markets as new natural resources (agricultural land, forests and minerals) were exploited. Thus, Canadian banking has continually had to migrate to new areas and to find appropriate methods of financing new industries and new products; and it has from the beginning possessed a strongly ‘international’ character‡ with much emphasis on the financing of foreign trade, on foreign exchange operations, and on correspondent relations with foreign banks. At the same time, as regional isolation has gradually broken down and the economy has been integrated, banks originating in local areas have become part of a nation-wide banking system, in part by process of amalgamation particularly marked in the first twenty-five years of the present century.

Bank Legislation

From the first, banks in what is now Canada sought to operate under Acts of incorporation (charters) passed by the legislatures of the colonies in which they operated. As new banks were incorporated and older ones obtained charter renewals, there developed in the bank charters themselves a quite extensive and fairly uniform code of banking law. At Confederation, responsibility for banking and currency was given to the Dominion Government and in 1871 the first general Bank Act was passed. This legislation is subject to review and revision every ten years, a feature that has helped to keep the banking system adapted to the needs of a changing economy. The decennial revision was due in 1964, but the Bank Act was extended in order to provide time to consider recommendations made by the Royal Commission on Banking and Finance established in 1961; the Commission's report was published in 1964.

The Bank Act has become a most detailed and comprehensive piece of legislation which provides for the internal regulation and organization of the banks, for the auditing of their accounts, and for the ways in which their capital stock may be issued and transferred, their dividends paid, and their affairs settled in case of amalgamation, winding-up or insolvency. In addition, it states what cash reserves the banks must keep, what reports they must make to the Government and to the Bank of Canada about their affairs and sets forth a variety of rules governing the conduct of business with the public. The Bank Act also specifies the maximum rate of interest that may be charged on bank loans. (Since the 1944 Bank Act revision this ceiling has been 6 p.c., replacing the 7-p.c. ceiling that had prevailed since 1871.) The banks derive their corporate existence from the Act, which

* More detail is included in an article appearing in the 1961 Year Book, pp. 1115-1120, prepared by J. Douglas Gibson, General Manager of The Bank of Nova Scotia. The early history of currency and banking in Canada is given in the 1938 Year Book, pp. 900-905. A list of the banks at Confederation appears in the 1940 Year Book, p. 897, and bank absorptions since 1867 are given in the 1941 edition, pp. 812-813. A table in the 1937 Year Book, pp. 894-895, shows the insolvencies since Confederation; the last insolvency occurred in 1923.

† The Senate, on July 28, 1964, approved the granting of charters to two additional banks—the Bank of Western Canada and the Laurentide Bank.

‡ The larger Canadian banks have long maintained offices in London and New York. In addition, some Canadian banks for more than half a century have been providing an important part of the commercial banking facilities in the Caribbean area (see Table 10, p. 1065).

states that "each bank . . . is a body politic and corporate and this Act is its charter"; successive Bank Acts have empowered the banks to do business for a period of ten years, until the next revision of the Act.

Banking Operations

Operating under the Bank Act, the chartered banks at their branches accept deposits from the public, make loans covering a wide range of commercial, industrial, agricultural and consumer activities, deal in foreign exchange, receive and pay out Bank of Canada notes and coin, provide safekeeping facilities, and perform a variety of other services coming within the scope of the general business of banking. The head office of a Canadian bank does not transact ordinary day-to-day business with the public; it performs general administration and policy-making functions, manages the bank's investment portfolio, does its centralized accounting work, and maintains specialized departments devoted to inspection of branch operations, the development of branch office methods, the acquisition of new business, premises, staff, arrangements with foreign banks, advertising, etc.

Under its branch system, Canadian banking is able to provide standard banking facilities throughout the country. Every branch, even the smallest, can provide all banking services and each has behind it the resources of a large bank, which means that lending requirements can be met just as well by a branch in a small town or a suburban branch as in the main branches of a large city. Branch banking also provides an excellent training for Canadian bank officers through the system of promotion and transfer from branch to branch. Almost without exception, the chief executives of the Canadian banks have grown up in the service and have been trained in this way.

The branch system has proved to be most flexible and Canadian banking has been able to keep pace with settlement and economic development during its periods of most rapid growth. Particularly during the past quarter-century, with a rapidly expanding economy, sharply rising population and growing urbanization, new branches have opened at a very rapid rate. Banking offices in Canada, which numbered about 3,300 at the end of 1939 and 3,100 at the end of 1945, grew by over 2,400 in the next nineteen years. As this growth suggests, Canadian banks have taken full advantage of the recent expansive atmosphere to extend the volume and variety of their services to industry and to individuals. Strongly competing for customers, they offer a wide variety of new deposit arrangements, including new savings programs, new forms of chequing accounts and greatly broadened lending facilities.

By the end of the War, the banks had experienced more than fifteen years of restricted demand for commercial credit; at the end of 1945 security holdings accounted for about 55 p.c. of the banks' total assets, compared with a little over 40 p.c. just before the War and only about 15 p.c. in 1930. In the early postwar years, the economic control apparatus created for the War was gradually dismantled. The expansion of the private sector of the economy and the contraction of the government sector were quickly reflected in a shift of bank assets from government securities to commercial loans. Between the end of 1945 and the end of 1950, bank loans in Canadian currency increased from about 21 p.c. to 31 p.c. of total assets. There was, at the same time, a rapid growth in total assets, as the monetary authorities leaned to the side of relatively easy money conditions to stimulate the economy and to ward off the widely anticipated postwar recession. In the five years ended Dec. 31, 1950, total assets expanded from about \$7,300,000,000 to \$9,400,000,000, almost all of the increase being in Canadian assets.

It was not until the outbreak of the Korean War in June 1950 that the fear of inflation, arising from the heavy demands on Canadian resources, led to the adoption of restraining measures. Since then, the banks have experienced substantial changes in their credit-granting capacity, as the country's official monetary policy was adapted to meet changes in business conditions. Alternating periods of ease and restraint have been marked by periods of rapidly rising bank assets followed by levelling-off phases.

The Korean boom of 1950-51 was followed, after only a short pause, by the investment boom of 1953-54. Recession in 1954-55 was accompanied by an easy monetary policy, during which the banks built up their liquid assets in the form of government bonds. Then a second and greater investment boom got under way in late 1955, which carried the Canadian economy and the banking system into another period when resources were strained to the limit. At this time, new measures of restraint were introduced into the Canadian banking system by the monetary authorities, including an agreed secondary reserve ratio of 7 p.c. in addition to the cash reserves of 8 p.c. already prescribed in the Bank Act revision of 1954. A further agreement with the Bank of Canada was aimed at restraining term loans for capital purposes* and in 1956 bank loans to instalment finance companies were also put under some restraint. The boom of 1955-57 was followed by a mild recession in 1957-58, moderate recovery in 1958-59, slackening in 1960 and recovery again in 1961-65. Over the period 1955-65, the banks have not regained the liquidity that characterized earlier postwar recessions, and there has been a growing need to husband resources carefully for the various and growing alternative outlets which developed as the result of economic growth, and of the efforts of both the Federal Government and the banks themselves to provide new uses for bank credit.

One of the first government measures was the Farm Improvement Loans Act of 1944, under which the chartered banks were authorized to make loans to farmers for the purchase of equipment and livestock and for making various improvements to their farm buildings and facilities (see p. 462). These loans are often for sizable amounts (an average of about \$1,500) and the terms have been gradually extended to a maximum sum of \$15,000 outstanding to any one borrower with a maximum period of ten years (four years for implements). The banks are guaranteed against loss up to 10 p.c. of their loans made during the three-year "lending periods", up to a maximum total of loans by all banks. This total is \$700,000,000 for the lending period to end in mid-1968. By the end of 1964 the total amount of loans made under this Act was approximately \$1,527,000,000.

The 1954 revision of the Bank Act introduced a major change in banking practice by enabling the banks to acquire mortgages issued under the National Housing Act. About 35 p.c. of all NHA mortgage loans in the years 1954-59 were made by the chartered banks, but at the end of 1959 the NHA interest rate was raised to 6½ p.c. and the banks withdrew from this field of lending. Notwithstanding this, by Dec. 31, 1964 they held some \$851,000,000 in NHA mortgages, representing about 4 p.c. of total assets. Another change affecting housing in the 1954 revision enabled the banks to make home improvement loans under a guarantee system rather similar to the one developed for farm improvement loans. By the end of 1964, home improvement loans amounting to more than \$348,000,000 had been approved and the banks had about \$74,000,000 of such loans on their books.

In November 1960, the Small Businesses Loans Act was passed guaranteeing, under terms to the banks similar to those of the Farm Improvement Loans Act, certain types of bank loan to small businesses for the purposes of making capital improvements to premises and equipment. This provides for loans that do not fall within the usual scope of bank lending to small business, by reason of the term nature of the loan, together with the lack of collateral resources of the borrower. Of course, chartered banks make loans to small businesses for a great variety of purposes, including many of a medium-term character; indeed, the working capital loan to the small-size or medium-size industry or commercial enterprise is the traditional stock-in-trade business of the chartered banks.

In April 1961, the charter of the Export Finance Corporation of Canada Limited, which had been incorporated by special Act of Parliament in June 1959 for private interests, was acquired by the chartered banks. The principal purpose of the Corporation is to assist in the medium-term (one to five years) financing of exports which have been insured by the Export Credit Insurance Corporation, a Crown company.

* Such loans were almost entirely a postwar innovation in Canadian lending practice, and had increased markedly during the easy-money period of 1954-55. Since 1956, term lending has been generally confined within narrower limits, although it is still practised when conditions permit.

Still another area of lending which has expanded greatly in recent years is that of consumer credit. Although the banks have always made some personal loans, they have recently moved aggressively into the field of lending to the general public for the purchase of automobiles, consumer durables and debt consolidation. Following the 1954 Bank Act revision, and partly as a result of the change then made which enabled the banks to take chattel mortgage security, some banks have developed extensive consumer credit divisions. Personal loans made by the banks, other than those secured by stocks and bonds and home improvement loans, mounted from \$420,000,000 at the end of 1957 to \$2,064,000,000 outstanding at June 30, 1965.

Outside of Canada, the Canadian banks have continued to expand their branch systems in the Caribbean area (although the two Canadian banks operating in Cuba found it necessary to withdraw), in South America, and in Europe. In recent years the growth of an international money market, following the economic recovery in Europe and the restoration of confidence in the stability of the Western economies and their currencies, has led to large movements of Western capital from one centre to another. The Canadian banks have participated extensively in this international money market, mainly through New York and London where most of them maintain large offices.

The postwar growth in bank assets has been accompanied by a substantial increase in total earnings. Earnings per share of capital employed did not increase to the same extent, however, as the banks found it necessary to raise new funds from time to time after 1950 in order to maintain an appropriate relationship between their shareholders' capital and the rapidly rising level of risk assets. The banks have been among the largest issuers of new share capital to Canadians in the past quarter-century.

Branches of Chartered Banks.—Although there are fewer chartered banks now than at the beginning of the century, there has been a great increase in the number of branch banking offices. As a result of amalgamations, the number of banks declined from 34 in 1901 to 10 in 1931, and remained at that figure until the incorporation of a new bank—The Mercantile Bank of Canada—in 1953 brought the total to 11. Since then the amalgamation in 1955 of The Bank of Toronto and The Dominion Bank as The Toronto-Dominion Bank, the amalgamation of Barclays Bank (Canada) with the Imperial Bank of Canada in 1956 and the amalgamation of the Canadian Bank of Commerce and the Imperial Bank of Canada as the Canadian Imperial Bank of Commerce on June 1, 1961 have reduced this number to eight.* The number of branches of chartered banks in each province periodically from 1868 to 1964 is given in Table 8.

* See footnote †, p. 1061.

¹ Realized profits and losses on disposal of securities are included in operating earnings. ² Before provision for income taxes, losses, and transfers to inner reserves. ³ Includes taxes other than income taxes. ⁴ Profits and losses on sale of fixed assets and adjustments relating to prior years. ⁵ After amounts retransferred to rest account. ⁶ Includes income taxes on taxable portion of additions to and amounts retransferred from inner reserves, and foreign income taxes.

Cheque Payments.—A monthly record of the value of cheques charged to customer accounts at all chartered bank offices in the major clearing-house centres of Canada is available from 1924. During the past twenty years the value of cheques cleared in these centres has increased steadily at the average rate of 9.4 p.c. a year. Clearing centres in British Columbia showed the highest rate of increase during that period, followed closely by Quebec and Ontario.

The value of cheques cashed in the 35 major clearing centres in 1964 reached a record high of \$417,000,000, an increase of 15.8 p.c. over 1963. All of the reporting centres recorded increases. St. Catharines, Ont., reported the largest advance at 29.4 p.c. Peterborough, Ont., increased by 22.1 p.c., Victoria, B.C., by 21.9 p.c. and London, Ont., by 21.1 p.c. Toronto, which accounted for 37.2 p.c. of the total value of cheques cleared, rose by 18.6 p.c. and Montreal by 17.8 p.c.

Subsection 4.—Government and Other Banking Institutions

There are three distinct types of savings banks in Canada in addition to the savings departments of the chartered banks and of trust and loan companies: (1) the Post Office Savings Bank, in which deposits are a direct obligation of the Government of Canada; (2) Provincial Government savings banking institutions in Ontario and Alberta, where the depositor becomes a direct creditor of the province; and (3) two important savings banks in the Province of Quebec—the Montreal City and District Savings Bank and La Banque d'Économie de Québec—established under federal legislation and reporting monthly to the federal Department of Finance. In addition, co-operative credit unions encourage savings among low-income classes and extend small loans to their members.

Post Office Savings Bank.—The Post Office Savings Bank was established under the Post Office Act of 1867 (SC 1867, c. 10) to "enlarge the facilities now available for the deposit of small savings, to make the Post Office available for that purpose, and to give the direct security of the nation to every depositor for repayment of all money deposited by him together with the interest due thereon". Branches of the Government of Canada's

Savings Bank under the Department of Finance were gradually amalgamated with this Bank over a period of 50 years and the amalgamation was completed in March 1929. Summary financial statistics for the years ended Mar. 31, 1962-65 follow.

<i>Item</i>	<i>1962</i>	<i>1963</i>	<i>1964</i>	<i>1965</i>

Provincial Government Savings Banks.—Institutions for the deposit of savings are operated by the Provincial Governments of Ontario and Alberta.

Ontario.—The establishment of the Province of Ontario Savings Office was authorized by the Ontario Legislature at the 1921 Session and the first branches were opened in March 1922. Interest at the rate of 3 p.c. per annum, compounded half-yearly, is paid on accounts, and deposits are repayable on demand. Total deposits at Mar. 31, 1965 were \$83,300,000 and the number of depositors was approximately 93,000; 21 branches were in operation throughout the province.

Alberta.—Savings deposits are accepted at 61 Province of Alberta Treasury Branches throughout the province. The total of these deposits at Mar. 31, 1965 was \$68,508,573, of which \$50,615,736 was payable on demand bearing interest at 3½ p.c. per annum, \$6,727,706 was in term savings for terms of from one to five years bearing interest at 4 p.c. to 4½ p.c. per annum depending on the term, and \$11,165,131 was in term deposit receipts for terms of from 30 days to 365 days bearing interest at rates comparable to those paid on the open market.

Quebec Savings Banks.—The Montreal City and District Savings Bank, founded in 1846 and now operating under a charter of 1871 had, at Mar. 31, 1965, a paid-up capital and reserve of \$12,000,000, savings deposits of \$335,318,236 and total liabilities of \$349,611,161. Total assets amounted to \$349,611,161, including \$116,383,877 of federal, provincial, municipal and other securities.

La Banque d'Économie de Québec, founded in 1848 (as La Caisse d'Économie de Notre-Dame de Québec) under the auspices of the St. Vincent de Paul Society, incorporated by Act of the Canadian Legislature in 1855 and given a federal charter by SC 1871, c. 7, had, at Mar. 31, 1965, savings deposits of \$55,548,107 and a paid-up capital and reserve of \$3,500,000. Total liabilities amounted to \$60,979,852 and total assets to a like amount.

Credit Unions.—Credit unions are savings and loan associations operated by people with a common bond. The bond of association may be in a parish, club, lodge or labour union, that of employment in a plant, industry or department, or that of a residence in a rural or well-defined urban community. During the ten-year period 1955-64, the number of credit unions chartered increased by 19 p.c., the number of members in reporting organizations by 97 p.c., and assets of reporting organizations by 241 p.c. Membership reached 3,422,658 in 1964, Quebec reporting over half of that membership and 56 p.c. of the total assets. In the Maritime Provinces, Quebec and Saskatchewan the credit unions are predominantly rural but the non-rural credit unions accounted for 62 p.c. of the total in Manitoba, 63 p.c. in Alberta, 75 p.c. in British Columbia, 87 p.c. in Newfoundland and 91 p.c. in Ontario.

Assets amounted to \$2,200,000,000 in 1964, an increase of 16 p.c. over 1963. Savings, which include shares and deposits, increased by 14 p.c. to reach \$2,000,000,000; the average saving per credit union member was \$579.

There were 28 central credit unions in 1964; these central credit unions act as credit unions for the credit unions, mainly by accepting deposits from them and making loans to them, and they facilitate the flow of funds to credit unions that cannot meet the demand for local loans. Some of them admit co-operative associations to membership. The centrals had assets of \$303,355,000 in 1964, an increase of 13 p.c. over 1963; they made loans amounting to \$103,420,000 to member credit unions and co-operatives. The Canadian Co-operative Credit Society serves as a central credit union for provincial centrals and co-operatives all across Canada. In 1964, membership in this national organization included four provincial centrals, four commercial co-operatives, the Co-operative Life Insurance Company and the Co-operative Fire and Casualty Insurance Company. This central had assets of \$2,072,000 in 1964, made loans to members amounting to \$2,605,000 and had member deposits of \$1,500,000.

Section 2.—Other Commercial Finance

Subsection 1.—Trust and Mortgage Loan Companies*

Trust and mortgage loan companies are registered with either the federal or provincial governments. They operate under the Loan and Trust Companies Acts (RSC 1952, c. 170 as amended by SC 1953 c. 5, SC 1958 c. 35, SC 1961 c. 51, and SC 1964-65 c. 40; RSC 1952 c. 272 as amended by SC 1953 c. 10, SC 1958 c. 42, SC 1961 c. 55 and SC 1964-65 c. 40, respectively) or under corresponding provincial legislation.

* Prepared by the Research Department of the Bank of Canada in co-operation with the Superintendent of Insurance for Canada.

The first mortgage loan companies were established in Ontario in the 1840's as co-operative associations to provide mortgage finance for their members. These associations evolved under legislation which was amended to give them permanent corporate status as mortgage lending institutions. They obtained their funds principally by selling medium- and long-term debentures to the public but also had the power to open deposit accounts. Trust companies were first incorporated in Ontario in the 1880's. Although the trust company legislation prevented them from borrowing funds, they had the power to accept funds in guaranteed trust accounts and invest them in specified types of assets. This feature of trust company legislation is now general throughout Canada. Although it does set up a trust rather than creditor relationship between trust companies and the holders of their certificates and deposits, the trust companies operate as financial intermediaries in the same way as mortgage loan companies, chartered or savings banks and other financial institutions. A more important special characteristic of trust companies is that they are the only corporations in Canada with power to act as trustees for property interests and to conduct other fiduciary business. In this capacity they act as executors, trustees and administrators under wills or by appointment, as trustees under marriage or other settlements, as agents in the management of estates of the living, as guardians of minor or incapable persons, as financial agents for municipalities and companies, as transfer agents and registrars for stock and bond issues, as trustees for bond issues and, where so appointed, as authorized trustees in bankruptcies.

Mortgage loan and trust companies were established and grew rapidly under provincial legislation in the late nineteenth and early twentieth centuries. Some companies were chartered by special Acts of Parliament but it was not until 1914 that federal legislation was passed and the Federal Government began to regulate trust and loan companies registered under its Acts. There are now eight federal trust companies and 11 federal loan companies. The Superintendent of Insurance examines these companies and also, by arrangement with the provinces, trust and loan companies incorporated in Nova Scotia, and trust companies incorporated in New Brunswick and Manitoba. Companies must be licensed by each province in which they wish to operate.

Although there are many differences among the various federal and provincial Acts, the broad lines of the legislation are common. In their intermediary business the companies have the powers mentioned above to borrow or, in the case of trust companies, accept funds in guaranteed accounts subject to maximum permitted ratios of these funds to shareholders' equity. The funds may be invested in specified assets which include first mortgages on real property, government securities and the bonds and equity of corporations having established earnings records. The companies may grant loans on the security of such bonds and stocks but may not make unsecured commercial and personal loans. Trust and loan companies are not required to hold specified cash reserves, as are the chartered and savings banks, but there are broadly defined "liquid asset" requirements in a number of the Acts. The investment powers of federal companies were broadened in 1965, when the maximum permitted value of conventional mortgage loans was raised from 66 $\frac{2}{3}$ p.c. to 75 p.c. of the appraised value of the property, the limit on common stock holdings was raised from 15 p.c. to 25 p.c. of total assets and the quality tests for common stocks eligible for investment were relaxed.

The trust and mortgage loan companies have been substantial members of the Canadian financial system since their early years. In the 1920's they held about one half of the private mortgage business in Canada but during the 1930's and World War II their growth rate fell off sharply because of the impact of the depression of the 1930's and World War II on the mortgage business. In the years since the War the re-emergence of strong demands for mortgage financing and the willingness of many trust and loan companies to compete aggressively for funds have led to sustained rapid expansion. These developments may be traced in the annual statistics published by the Superintendent of Insurance and provincial authorities, and in the quarterly balance sheet data compiled by the Dominion Bureau of Statistics.

According to the DBS figures, the mortgage loan companies had assets of \$1,908,000,000 at the end of 1964 compared with \$1,544,000,000 a year earlier. Their holdings of mortgages amounted to \$1,469,000,000, or 77 p.c. of total assets. Specialization in mortgage investment has kept this ratio fairly steady over the years. At the end of the year, these companies had borrowed \$1,256,000,000 or 66 p.c. of their total funds by the sale of debentures and \$320,000,000 from deposit accounts, about one half of the deposits being in chequable savings accounts.

At the end of 1964, the "intermediary" assets of trust companies in the DBS survey were \$2,789,000,000 compared with \$2,321,000,000 a year earlier. In addition, the companies had a total of \$9,966,000,000, at book values, under administration in estate, trust and agency accounts on Dec. 31, 1963.* Trust companies have not specialized in mortgage financing to the same extent as loan companies but in recent years they have been putting a high proportion of their funds into these investments so that mortgages were 51 p.c. of their assets at the end of 1964 compared with 39 p.c. five years earlier. The trust companies had \$1,478,000,000 of term certificates outstanding and \$1,050,000,000 in deposit accounts in December 1964. As in the case of mortgage loan companies, about one half of the deposits were in chequable accounts. There is considerable variety among the trust companies and a few have developed a substantial short-term business, raising funds by issuing certificates for terms as short as thirty days and also operating as lenders in the money market. Nevertheless, it remains true that the main preoccupation of the trust companies in their intermediary role, as of the mortgage loan companies, is the channelling of savings into mortgages and other long-term investments.

More complete information may be found in the reports of the Superintendent of Insurance on Loan and Trust Companies, the reports of provincial supervisory authorities and in the Report of the Royal Commission on Banking and Finance as well as submissions and evidence put before the Commission. Quarterly balance sheet statements are published by the Dominion Bureau of Statistics and the Bank of Canada. The annual figures given in Tables 19-22 are from the Department of Insurance report; data for 1964 were not available at the time of printing.

* Department of Insurance figure; latest available.

¹ Includes companies chartered by the Governments of Nova Scotia, New Brunswick and Manitoba which, by arrangement, are inspected by the federal Department of Insurance. ² Excludes provincial companies of Nova Scotia, New Brunswick and Manitoba which are included with federal companies.

Subsection 2.—Licensed Small Loans Companies and Licensed Money-Lenders*

Small loans companies and money-lenders are subject to the Small Loans Act (RSC 1952, c. 251, as amended by SC 1956, c. 46). This Act, first passed in 1939, sets maximum charges on personal cash loans not in excess of \$1,500 and is administered by the Department of Insurance. Lenders not licensed under the Act may not charge more than 1 p.c. per month. Those wishing to make small loans at higher rates must be licensed each year by the Minister of Finance under the Small Loans Act. The Act allows maximum rates, including charges of every kind, of 2 p.c. per month on unpaid balances not exceeding \$300, 1 p.c. per month on the portion of unpaid balances exceeding \$300 but not exceeding \$1,000 and one half of 1 p.c. on any remainder of the balance exceeding \$1,000. Loans in excess of \$1,500 are not regulated and lenders operating entirely above this limit and the larger loans of licensed lenders are thus exempt from the Act. Nor does the Act regulate charges for the instalment financing of sales. Prior to Jan. 1, 1957, the Act applied only to loans of \$500 or less and the maximum rate was 2 p.c. per month.

At the end of 1963, there were six small loans companies and 83 money-lenders licensed under the Act. Small loans companies are incorporated by special Acts of the Parliament of Canada, the first of them commencing business in 1928; the money-lenders include provincially incorporated companies and a few partnerships and individuals. Many of the small loans companies and money-lenders are affiliated with other financial institutions, principally Canadian sales finance companies and American finance or loan companies, and these subsidiary companies account for a high proportion of the total business of licensed lenders. The affiliations with sales finance companies reflect the close relationship between instalment financing and the consumer loan business. The Dominion Bureau of Statistics publishes quarterly balance sheets for sales finance and consumer loan companies as a whole and does not attempt to distinguish two groups within the industry.†

The subsidiary small loans companies and money-lenders obtain most of their funds through their parent companies. A few of the larger companies have supplemented their bank loans by selling short-term paper in the market but the amount has been small compared with the short-term market borrowing of the sales finance companies. The smaller independent companies rely mainly on their shareholders and on borrowing from the chartered banks.

The annual figures of assets and liabilities given in Table 23 for 1960-63 are from the Department of Insurance report.‡

* Prepared by the Research Department of the Bank of Canada in co-operation with the Superintendent of Insurance for Canada.

† See *Business Financial Statistics* (Catalogue No. 61-006). More complete details on the business of licensed lenders are given in the *Report of the Superintendent of Insurance for Canada on Small Loans Companies and Money-Lenders* for the year ended Dec. 31, 1963. (Catalogue No. In 3-4/1963.)

23.—Assets and Liabilities of Small Loans Companies and Money-Lenders, 1960-63

Assets and Liabilities	1960	1961	1962	1963
	\$	\$	\$	\$
Assets	549,397,569	589,671,958	677,428,408	735,660,587

Balances, large loans and other contracts	143,809,201	149,610,423	179,888,234	187,336,161
Cash	7,136,432	6,114,919	5,924,323	7,999,302
Other	6,903,382	7,789,342	9,368,907	10,294,215
Liabilities	549,397,569	589,671,958	677,428,408	735,660,587
Borrowed money	446,112,043	477,639,594	553,914,368	598,496,241
Reserves for losses	10,966,543	11,603,200	13,202,526	14,962,448
Paid-up capital	39,495,327	42,375,438	45,030,972	48,368,329
Surplus paid in by shareholders	390,390	390,390	407,390	449,865
Earned surplus	20,107,677	25,195,896	29,462,148	34,409,797
Other	32,325,589	32,467,440	35,411,004	38,983,907

The combined companies showed an increase in the amount of business done in 1963 compared with 1962. The number of small loans made to the public during 1963 increased from 1,304,155 to 1,380,063 or by about 6 p.c., and the amount of such loans rose from \$700,906,537 to \$769,648,673 or by about 10 p.c. The average small loan made was approximately \$558 compared with \$537 in 1962. At the end of the year, small loans outstanding numbered 1,112,851 for an amount of \$530,030,909 or an average of \$476 per loan; comparable figures for 1962 were 1,055,266, \$482,246,944 and \$457, respectively.

Gross profits of small loans companies and money-lenders before income taxes and before taking into account any increase or decrease in reserves for bad debts decreased from \$30,517,560 in 1962 (\$19,781,761 being the profit on small loans and \$10,735,799 the profit on business other than small loans) to \$29,175,023 in 1963 (\$19,137,385 being the profit on small loans and \$10,037,638 the profit on business other than small loans).

Subsection 3.—Foreign Exchange

The dollar, established officially as the currency of the united provinces of Canada on Jan. 1, 1858, and extended to cover the New Dominion by the Uniform Currency Act of 1870, was defined as 15/73 of the British gold sovereign.* That is, the par rate of exchange between the dollar and the pound sterling was fixed at \$4.866, making the Canadian currency the equivalent of the United States dollar at parity. With minor variations between the import and export gold points representing the cost of shipping gold in either direction, the value of the pound sterling in Canada remained at this level until the outbreak of World War I. The United States dollar, on the other hand, was at a discount in terms of Canadian funds for the first eleven years after Confederation since it was not redeemable in gold from February 1862 to January 1879. On the basis of gold equivalents it would appear that the greatest monthly average discount on the United States dollar after Confederation was approximately 31 p.c., reached in August 1868. From 1879 to 1914 the dollars of the two countries remained at par, varying only within the gold points or under \$2 per thousand.

On the outbreak of World War I, Canada and Britain suspended the gold standard. For some weeks both the pound and the Canadian dollar rose to a premium in New York. Subsequently both fell back with the pound going to a slight discount. In January 1916 the pound was officially pegged at \$4.76 in American funds. This level was maintained with the help of funds realized by sales of United States securities owned by residents of Britain, by borrowing in the United States and, after the American entry into the War, by the United States Government financing Allied purchases in that country.

* The gold sovereign remained the standard for the Canadian dollar until 1910 when the currency was defined in terms of fine gold, making it the exact gold equivalent of the United States dollar. Both British and United States gold coins were, however, legal tender in Canada for this whole period.

From 1915 to the end of 1917, fluctuations in the rate of exchange between the Canadian and United States dollars did not exceed 2 p.c. on either side of parity; the pound was stable in terms of United States dollars during this period. In 1918 the Canadian dollar began to weaken. After the pound was unpegged in 1919, the Canadian dollar declined further and in 1920 it fell to 82 cents in New York with sterling going as low as \$3.18.

By the latter half of 1922 the Canadian dollar had returned practically to par in New York. Despite some further weakness in sterling, the dollar remained close to that level during the next two years, averaging 98.04 and 98.73 cents in terms of the United States dollar in 1923 and 1924, respectively, and fluctuating between a discount of about 3.6 cents and a premium of approximately 0.4 cents. After Britain resumed gold payments in April 1925, the range of fluctuation of the Canadian dollar narrowed further. From Canada's return to the gold standard in the period July 1, 1926 to January 1929, the exchange rate remained within the gold points. The Canadian dollar then went to a slight discount in New York. With the exception of the period July to November 1930, when it went to a small premium in New York, the dollar remained below parity until Britain abandoned the gold standard in September 1931. After that month the pound sterling depreciated sharply and the Canadian dollar followed, reaching lows* in New York of 80.5 cents in December 1931 and 82.6 cents in April 1933.

Following the prohibition of gold exports in the latter month by the United States, the pound and the Canadian dollar strengthened rapidly in terms of American funds. By November 1933 both currencies had reached a premium in New York. Meanwhile, in a series of steps beginning with permitting the export of newly mined gold in August 1933, the United States moved toward resumption of the gold standard. As of Feb. 1, 1934, the United States Treasury undertook to buy all gold offered at \$35 per ounce. After that the exchange rate between the Canadian and United States dollars stabilized. Until the outbreak of war in 1939 much of the trading was conducted within one cent of parity although the Canadian dollar in New York did go as high as 103.6 cents (September 1934) and as low as 98.0 cents (September 1938).*

On the outbreak of World War II in September 1939, Britain and other sterling countries introduced foreign exchange control involving fixed buying and selling rates of \$4.02½ and \$4.03½, respectively, in terms of the United States dollar. The Canadian dollar in New York declined until Sept. 16, 1939, when the Government instituted foreign exchange control† in Canada and established fixed buying and selling rates of \$1.10 to \$1.11 for the U.S. dollar and \$4.43 to \$4.47 for sterling. As compared with previous months, the depreciation of the Canadian dollar in terms of United States funds was approximately half as great as that of the pound sterling.

Apart from a minor adjustment on Oct. 15, 1945, when selling rates for U.S. dollars and sterling were lowered to \$1.10½ and \$4.45, respectively, the official rates for the Canadian dollar remained unchanged until July 5, 1946. At that time the rate on the U.S. dollar was restored to par, with buying and selling rates for that currency of \$1.00 to \$1.00½ and for sterling \$4.02 to \$4.04. These rates continued in effect until Sept. 19, 1949 when, following a 30.5-p.c. reduction by Britain in the value of sterling to \$2.80 U.S. (an action which was paralleled in varying degrees by numerous other currencies), Canada returned to the former official rates of \$1.10 and \$1.10½ for United States funds. Sterling was quoted at \$3.07¼ and \$3.08½ on the basis of the New York cross rate.

On Sept. 30, 1950, the Minister of Finance announced that official fixed foreign exchange rates which had been in effect at varying levels since 1939 would be withdrawn effective Oct. 2, and that the rate would henceforth be determined in the market for foreign exchange. This policy was carried out within the framework of exchange control until Dec. 14, 1951, at which time the Foreign Exchange Control regulations were revoked by the Governor in Council, terminating the period of exchange control that had prevailed in Canada since 1939. The Foreign Exchange Control Act was repealed in 1952. On

* Noon quotations. Daily highs and lows may have exceeded these rates.

† The operations of the Foreign Exchange Control Board from the time of its establishment to the termination of exchange control in December 1951 are reviewed in the 1941 to 1952-53 editions of the Year Book.

May 2, 1962, the Minister of Finance announced that the Canadian dollar was being stabilized at a fixed par value of 92½ cents in terms of United States currency. This action was taken with the concurrence of the International Monetary Fund and, in accordance with the Articles of Agreement of that organization, the Government of Canada undertook to maintain the Canadian exchange rate within a margin of 1 p.c. on either side of the established par value.

The movements of the U.S. dollar in Canadian funds from January 1957 to December 1965 are shown in Table 24.

¹ On Oct. 1, 1959, \$62,500,000 representing the gold portion of Canada's increased quota was transferred to the International Monetary Fund.

² Includes the proceeds of a drawing equivalent to U.S. \$300,000,000 which was made from the International Monetary Fund in June 1962 and which was outstanding at year-end; the amount of Canada's net obligation to the International Monetary Fund was \$276,000,000 at the end of 1962.

³ The amount of Canada's net obligation to the International Monetary Fund was \$196,000,000 at the end of 1963.

Subsection 4.—The Bond Market*

Sales of Canadian Bonds.—Canadian borrowers, both government and corporations, raised a net total of \$2,887,000,000 in the bond market in 1964, a slight increase over the total of \$2,787,000,000 raised in 1963. However, there was a considerable change in the competition of borrowing in the later year. The Government of Canada reduced its borrowing from \$827,000,000 to \$458,000,000, the lowest level since 1957; sharp increases took place in the sales of municipal and corporate bonds; and net sales of provincial bonds were relatively unchanged.

* Prepared in the Business Finance Division of the Dominion Bureau of Statistics, using Bank of Canada figures.

The Government of Canada issues Treasury bills, marketable bonds and non-marketable bonds, most of the latter being in the form of Canada Savings Bonds. The net annual increase in Canada Savings Bonds has been quite stable over the four years 1961-64, ranging from \$540,000,000 in 1962 to \$480,000,000 in 1964, but net issues of marketable bonds and Treasury bills had much larger year-to-year variations.

Bonds Outstanding.—Total government and business bonds outstanding were estimated at \$45,830,000,000 at Dec. 31, 1964, an increase of 20 p.c. over the total of \$38,274,000,000 outstanding at the end of 1961. The largest increase was shown by provincial bonds which went up 35 p.c. over the following three years and the smallest increase by Government of Canada bonds which advanced 11 p.c. In 1963 the Quebec Government purchased the private hydro-electric companies operating in that province and the corporate bonds of these companies were replaced by provincial government guaranteed bonds. Thus, debt of provincial governments as a whole increased by more and debt of corporations by less than would otherwise have been the case.

The total of outstanding bonds includes Treasury bills, finance company paper and other short-term commercial paper. It does not include the term deposits, certificates and debentures of trust and mortgage loan companies, which totalled about \$2,500,000,000 at the end of 1964. Also excluded is mortgage debt, which the Central Mortgage and Housing Corporation estimated at over \$16,000,000,000 at the end of 1963.

¹ Excludes a small amount of debt which could not be identified by issue. All short-term commercial borrowing is included in the "All other resident" item.

PART II.—INSURANCE*

Section 1.—Life Insurance

Life insurance in force in Canada with companies registered by the Federal Government (exclusive of fraternal benefit societies) amounted to over \$62,672,000,000 at the end of 1964, an increase of \$5,868,000,000 during the year. The ratio of gain in business in force, expressed as a percentage of the amount in force at the beginning of the same year, stood at 10.3 p.c. in 1964.

¹ Death, disability and maturity under insurance contracts.

Subsection 2.—Operational Statistics for Life Insurance Transacted in Canada by Companies under Federal Registration

The amount of life insurance in force in Canada has shown an almost continuous advance year by year since the beginning of the record in 1869. The amount per capita of the estimated population has more than doubled since 1955.

The operations analysed in the tables of this Subsection, with the exception of Table 6, include only those of companies under federal registration and are exclusive of fraternal organizations and provincial licensees. However, companies under federal registration account for over 92 p.c. of the life insurance in force in Canada.

2.—Life Insurance Effectuated and in Force in Canada by Companies under Federal Registration, Decennially 1880-1950 and Annually 1955-64

NOTE.—Figures for 1889-1900 are given in the 1938 Year Book, p. 953; for 1901-39 in the 1942 edition, p. 855; and for 1940-54 in the 1957-58 edition, p. 1168. Statistics of fraternal society insurance, excluded here, are given at pp. 1087-1089.

Subsection 3.—Finances of Companies Transacting Life Insurance under Federal Registration

The financial statistics in Tables 7 and 8 relate only to life insurance transacted by companies under federal registration. The figures for British and foreign companies apply to their assets, liabilities and operations in Canada only. On the other hand, the assets and liabilities, revenue and expenditure of Canadian companies are given for total business, including business arising outside of Canada as well as in Canada.

Subsection 4.—Life Insurance in Canada Transacted by Fraternal Benefit Societies

In addition to life insurance, some fraternal benefit societies grant other insurance benefits to members, notably sickness benefits, but these are relatively unimportant. Table 9 gives statistics of life insurance in Canada transacted by fraternal benefit societies and Table 10 shows statistics of assets, liabilities, income and expenditure relating to all business of Canadian societies and to the business in Canada of foreign societies. The rates charged by these societies are computed to be sufficient to provide the benefits granted, having regard for actuarial principles. The benefit funds of each society must be valued annually by a qualified actuary (Fellow, by examination, of the Institute of Actuaries of Great Britain, of the Faculty of Actuaries in Scotland, or of the Society of Actuaries) and a readjustment of rates or benefits must be made, unless the actuary

certifies to the solvency of each fund. The first sections of Tables 9 and 10 relate to the Canadian societies registered by the federal Department of Insurance; there were 15 such societies at the end of 1964, only one of which did not grant life insurance benefits.

Under an amendment to the Insurance Act, effective Jan. 1, 1920, all foreign fraternal benefit societies were required to obtain authority from the Federal Government prior to transacting business in Canada. However, any such societies which at that date were transacting business under provincial licences, though forbidden to accept new members, were permitted to continue all necessary transactions in respect of insurance already in force. Most of these societies and some foreign societies that had not been licensed previously by the provinces have since obtained federal authority to transact business. At the end of 1964 there were 35 foreign fraternal benefit societies federally registered to transact business in Canada, although two of these do not grant life insurance benefits.

Subsection 5.—Life Insurance Effectuated and in Force Outside Canada by Canadian Companies under Federal Registration

In this Subsection, there are given for the years 1963 and 1964 summary statistics of insurance effectuated and insurance in force at the end of the year in currencies other than Canadian dollars, as written by Canadian companies under federal registration. The data given are in terms of Canadian dollars, the conversions from the various foreign currencies having been made at the book rates of exchange used by the various companies.

Canadian life insurance companies operating under federal registration at Dec. 31, 1964 had life insurance in force amounting to \$18,075,931,516 in countries outside Canada. Insurance in force in currencies other than Canadian dollars amounted to \$18,050,167,500; the difference between these figures is presumably the net amount of business in countries outside Canada transacted in Canadian currency. The business in force in Canada of Canadian companies registered by the Federal Government amounted to \$43,209,488,534 at Dec. 31, 1964, and the total business on the books of these companies, in and out of

Canada, amounted to \$61,285,420,050. Thus, over 29 p.c. of the total business in force for Canadian companies registered by the Federal Government was in force in countries outside Canada. In connection with their business outside Canada, the Canadian life insurance companies registered by the Federal Government held, at the end of 1964, Commonwealth and foreign investments in the amount of \$3,462,399,958.

Approximately 70 p.c. of all business in force in currencies other than Canadian is in United States currency and 17 p.c. is in sterling. From a slightly different point of view, approximately 22 p.c. of this business in force is in currencies of Commonwealth countries other than Canada, and 78 p.c. in currencies of foreign countries.

Section 2.—Fire and Casualty Insurance

At the end of 1964 there were 272 companies registered by the Federal Government to transact fire insurance in Canada (86 Canadian, 74 British and 112 foreign). Of these companies, 265 (80 Canadian, 74 British and 111 foreign) were also registered to transact casualty insurance. In addition, 102 companies were registered by the Federal Government to transact casualty insurance but not fire insurance (26 Canadian, 7 British and 69 foreign). Of the companies registered to transact fire and/or casualty insurance, 79 were also registered to transact life insurance; 14 of these were registered for fire, life and casualty insurance and 65 for life and casualty but not fire insurance. It should be noted also that, in addition to the companies registered by the Federal Government to transact casualty insurance, there were 28 registered fraternal benefit societies transacting accident and sickness insurance, of which 25 also transacted life insurance.

The operations analysed in the tables of this Section, with the exception of Table 12, include only those companies under federal registration. As shown in Table 12, some fire and casualty insurance is transacted in Canada by companies that are provincially licensed only. These companies generally confine their operations to the province of incorporation and many of them are mutual organizations transacting only fire insurance on a county, municipal or parish basis. The table relates to insurance companies only; no data are included for fraternal benefit societies.

Subsection 2.—Fire Losses

The information in Tables 15 to 17, which deals with the loss of property and life caused by fire, has been summarized from the annual report *Fire Losses in Canada* prepared by the Dominion Fire Commissioner, Department of Public Works. Federal losses not included in these figures in 1963 amounted to \$6,497,474 from 2,053 fires; average federal losses for the period 1954-63 amounted to \$5,094,070 from an annual average of 2,238 fires.

15.—Statistics of Fire Losses, 1954-63

NOTE.—Figures for 1926-46 are given in the 1947 Year Book, p. 1078, and those for 1947-53 in the 1960 edition, p. 1169. Figures from 1922 may be obtained from the Dominion Fire Commissioner, Department of Public Works.

**Subsection 4.—Finances of Companies Transacting Fire and Casualty
Insurance under Federal Registration**

The financial statistics of Tables 19 and 20 relate to fire and casualty insurance transacted by companies under federal registration. The figures for British and foreign companies apply to their assets, liabilities and operations in Canada only. On the other hand, the assets and liabilities, revenue and expenditure of Canadian companies are given for total business, including business arising out of Canada as well as in Canada.

Section 3.—Government Insurance

Federal Government Insurance

For more than fifty years the Federal Government has operated an annuity service, instituted to assist Canadians to make provision for old age; this service is described below. In addition, various insurance schemes have been adopted in recent years by the Federal Government or co-operatively by the federal and provincial governments. Information on unemployment insurance, health insurance, veterans insurance, export credits insurance, etc., will be found in the appropriate Chapters on Labour, Health and Welfare, Foreign Trade, etc.

Government Annuities.*—The Government Annuities Act (RSC 1952, c. 132) was passed in 1908 and is administered by the Minister of Labour.

A Canadian Government annuity is a fixed yearly income purchased from and paid by the Government of Canada. The annuity is payable in monthly instalments for life, or for life and guaranteed for a period of years. The minimum annuity is \$10 and the maximum \$1,200 a year or the actuarial equivalent if the annuity is to reduce by the amount of payments under the Old Age Security Act. Annuity contracts may be deferred or immediate. Deferred annuities are purchased by periodic or single premiums. Immediate annuity contracts provide immediate income. Annuities may be arranged to reduce by \$75 a month when payments under the Old Age Security Act begin.

The property and interest of the annuitant are neither transferable nor attachable. In the event of the death of the annuitant before a deferred annuity vests, all money paid is refunded with interest. Provision is made in the Act for group annuity contracts whereby employers may contract for the purchase of annuities on behalf of their employees, or associations on behalf of their members, the purchase money being derived partly from wages and partly from employer contributions or entirely from employer contributions.

* Revised in the Government Annuities Branch, Department of Labour, Ottawa.

Annuities arising from individual contracts may be taxable in either of two ways: (1) if registered under Sect. 79B of the Income Tax Act for tax exemption on premiums, the annuity is fully taxable, or (2) if not registered, the annuity is taxable on the interest portion only. Annuities arising from registered pension plans are fully taxable but the employee and the employer are entitled to tax exemption year by year on their annual contributions to the pension plan.

From Sept. 1, 1908, the date of the inception of the system, to Mar. 31, 1965, the total number of annuity contracts and certificates issued, excluding replacements, was 537,041. On the latter date, 93,342 annuities were being paid amounting to \$53,189,000 annually and 295,672 deferred annuities were being purchased. The net total amount of purchase money received up to Mar. 31, 1965 was \$1,408,936,000. At that date there were in force 1,312 pension plans underwritten by government annuities, providing 205,332 employees with portable pensions; approximately 28,000 retired employees were receiving pensions. The number of certificates issued during the year was 1,783 compared with 2,470 in 1963-64.

1 Undetermined.

Provincial Government Insurance

Saskatchewan.—The Saskatchewan Government Insurance Office, a Crown corporation established by the Saskatchewan Government Insurance Act, 1944, commenced business in May 1945. It deals in all types of insurance other than sickness and life. The aim of the legislation is to provide residents of the province with low-cost insurance designed for their particular needs. Rates are based on loss experience in Saskatchewan only and the surplus is invested, to the extent possible, within the province. Premium income for 1964 amounted to \$9,996,427 and earned surplus to \$376,925. The total amount made available to the Government of Saskatchewan from 1945 to Dec. 31, 1964, was \$4,986,002. Assets at the latter date were \$20,129,885, of which \$13,700,000 were invested in bonds and debentures issued by Saskatchewan schools, municipalities, hospitals and the province. Independent insurance agents numbering 588 sell government insurance throughout the province.

The Automobile Accident Insurance Act, which became effective Apr. 1, 1946, is administered by the Saskatchewan Government Insurance Office. It establishes a compulsory automatic insurance plan designed to provide a reasonable minimum of compensation for losses arising from motor vehicle accidents regardless of fault. It also provides public liability insurance, with an inclusive limit of \$35,000 for bodily injury and property damage, as well as comprehensive and collision coverage subject to a \$200 deductible for private passenger cars. Rates vary from \$4 a year for trucks to \$53 for late-model private passenger cars, and also vary for other types of motor vehicles depending on size and usage. From the inception of the Act in 1946 to Dec. 31, 1964, more than \$81,000,000 was paid in claims.

The Saskatchewan Government Insurance Office, under contract with the Saskatchewan Department of Natural Resources, offers insurance to farmers covering damage to unharvested crops by certain wildlife such as ducks, geese, sandhill cranes, deer, elk, bear and antelope.

Information regarding the operation of the Saskatchewan Government Insurance Office or the Automobile Accident Insurance Act may be obtained from the Office Librarian, Saskatchewan Government Insurance Office, Regina, Sask.

Alberta.—Provincial government insurance in Alberta, coming within the purview of the Alberta Insurance Act, relates (1) to the Alberta General Insurance Company, in which the entire business of the fire branch of the Alberta Government Insurance Office was vested by the Legislature on Mar. 31, 1948, and (2) to the Life Insurance Company of Alberta, which was constituted on the same date to take over the life branch of the Alberta Government Insurance Office. Each company is administered by a separate board of directors. The Lieutenant-Governor in Council appoints the members to the respective boards but the charter of the Life Insurance Company of Alberta provides for the election of two policyholder directors. Although both companies are Crown corporations, they are not entitled to the usual immunities of the Crown, since they may sue and be sued in any court of competent jurisdiction.

A variety of agencies in Alberta offer forms of prepaid protection corresponding to insurance but the nature of the enabling legislation governing these plans emphasizes the fact that they do not constitute insurance. Because such exemptions are specifically provided by the insurance laws of the province, reference to these plans is necessary only to make it clear that they do not come within the scope of the Alberta Insurance Act. It should be noted that the Alberta Hail Insurance Act is administered by the Provincial Treasurer but none of the provisions of the Alberta Insurance Act apply to the Alberta Hail Insurance Board.

Further information on provincial insurance matters may be obtained from the Superintendent of Insurance, Department of the Provincial Secretary, Edmonton, Alta.

Section 4.—Pension Plans

Very few pension plans in Canada have been in existence for more than 25 years and most of the older plans were installed by governments and financial institutions, such as banks. Employers in industry began showing an interest in pension plans for their employees shortly before World War II and from that time on there was a rapid increase in the rate at which plans were introduced.

Up to 1948 the majority of employers made arrangements with either the Annuities Branch of the Department of Labour (see pp. 1097-1099) or an insurance company for the underwriting of their plans. Then began the use of the facilities of corporate trustees (trust companies) to handle pension moneys, and by 1953 the amount of funds under control of such trustee plans had become a significant factor in the capital market and a growing form of savings. Trustee pension funds are also managed by individual trustees appointed by the employer or through a Pension Fund Society, which is a body incorporated under federal or provincial pension fund societies Acts, companies Acts, etc.

Table 24 shows the distribution of pension business for the years 1960-64.

Pension trust funds derive their income from employer and employee contributions, investment income and profit on the sale of securities. Expenditures arise from pension payments, pensions purchased from an underwriter on retirement or separation, cash withdrawals on death or separation, administrative costs and losses on the sale of securities. The funds are invested in federal, provincial, municipal and corporate bonds, stocks, mortgages, real estate and lease-backs. In recent years corporate trustees have introduced the "pooled" or "classified" type of fund, which enables small plans to have their assets combined so that each fund participates in the diversity, security and yield previously available only to the much larger single funds. The trustees of a fund, whether corporate or individuals, may also purchase mutual funds.

Table 25 shows the various types of trusteed funds and the income, expenditures and assets of the funds in 1962-64.

PART 1.—THE ARMED SERVICES AND DEFENCE RESEARCH*

Section 1.—The Department of National Defence

The control and management of all matters relating to national defence, the Canadian Forces and the Defence Research Board are the responsibility of the Minister and Associate Minister of National Defence; the duties and functions relating to national survival have also been assigned to the Department of National Defence with the Canadian Army undertaking the major role.

Effective Aug. 1, 1964, the Headquarters of the Royal Canadian Navy, the Canadian Army and the Royal Canadian Air Force were integrated to form a single Canadian Forces Headquarters (CFHQ) under a single Chief of Defence Staff. The role of CFHQ is to provide military advice to the Minister of National Defence and to control and administer the Canadian Forces.

CFHQ is organized in four functional Branches headed by the Vice-Chief of Defence Staff, the Chief of Personnel, the Chief of Technical Services and the Comptroller General, who are responsible for advising and supporting the Chief of Defence Staff in matters relating to their assigned spheres of activity. The Royal Canadian Navy, Canadian Army and Royal Canadian Air Force retain their individual identities. The Defence Research Board conducts research relating to the defence of Canada and also undertakes the development of or improvements in materiel.

The civilian administration of the Department is organized under the Deputy Minister and is constituted on a functional basis. The Deputy Minister, assisted by an Associate Deputy Minister, maintains a continuing review and control over the financial aspects of operational policy, logistics, and personnel and administration. Three Assistant

* Prepared (November 1965) in the Office of the Deputy Minister, Department of National Defence, Ottawa.

Deputy Ministers each administers a division of the Deputy Minister's branch responsible for administration and personnel, logistics and finance. Also responsible to the Deputy Minister are the Judge Advocate General, the Departmental Secretary and the Director of Information Services.

The Defence Council meets at regular intervals to consider and advise on major policy matters. The Council consists of: the Minister of National Defence as Chairman; the Associate Minister of National Defence as Vice-Chairman; and the Parliamentary Assistant to the Minister of National Defence, the Deputy Minister of National Defence, the Chief of Defence Staff, the Chairman of the Defence Research Board, the Vice-Chief of Defence Staff and a Secretary as members.

Liaison in Other Countries.—The Chief of Defence Staff, who is the Canadian military representative to the North Atlantic Treaty Organization, is responsible for advice on all NATO military matters and acts as a military adviser to Canadian NATO delegations. For purposes of liaison and the furtherance of international co-operation in defence, Canada also maintains: (1) the Canadian Defence Liaison Staff London, representing the Canadian Armed Forces and the Defence Research Board in Britain, the Chairman of which is the principal military adviser to the Canadian High Commissioner in London; (2) the Canadian Defence Liaison Staff Washington, representing the Canadian Armed Forces and the Defence Research Board in the United States, the Chairman of which is the principal military adviser to the Canadian Ambassador in Washington, the Canadian National Liaison Representative to SACLAN'T Headquarters, and the Canadian member of the NATO Military Committee in Permanent Session; (3) the Canadian National Military Representative in Paris, who is the principal military adviser to the Canadian Permanent Representative to the North Atlantic Council and the Canadian National Military Representative to SHAPE; and (4) Service Attachés in various countries throughout the world. In addition, a number of defence matters of concern to both Canada and the United States are considered by the Permanent Joint Board on Defence, which provides advice on such matters to the respective governments.

Canada-United States Committee on Joint Defence.—This Committee is composed of: for Canada, the Secretary of State for External Affairs, the Minister of National Defence and the Minister of Finance; for the United States, the Secretary of State, the Secretary of Defense and the Secretary of the Treasury; together with such other Cabinet members as either government may designate from time to time. Its function is to consult periodically on any matters affecting the joint defence of Canada and the United States; to exchange information and views at the ministerial level on problems that may arise, with a view to strengthening further the close co-operation between the two governments on joint defence matters; and to report on such discussions in order that consideration may be given to measures deemed appropriate and necessary to improve defence co-operation. Meetings normally alternate between Canada and the United States with the host country providing the chairman.

Mutual Aid.—Canada's contributions to NATO are outlined on pp. 170-171.

Rates of Pay and Allowances.—The entire pay structure for comparable ranks in the different Services is on a uniform basis. Monthly rates of pay and allowances effective Oct. 1, 1964 are given in Table 1.

1.—Monthly Rates of Pay and Allowances for the Canadian Armed Forces, Effective Oct. 1, 1964

Royal Canadian Navy	Canadian Army	Royal Canadian Air Force	Basic Pay	Progressive Pay						Group Pay for Tradesmen and Specialists ¹	Subsistence Allowance		Ration Allowance	Quarters Allowance	Marriage Allowance	Separated Family's Allowance (personnel not in married quarters and with children)	
				Years in Rank							Personnel not in Receipt of Marriage Allowance	Personnel in Receipt of Marriage Allowance				In Receipt of Subsistence Allowance	Not in Receipt of Subsistence Allowance
				2	3	4	6	8									
Ordinary Seaman (under 17 years)	Private (recruit under 17 years)	Aircraftman 2 (under 17 years)	\$ 65	\$ —	\$ —	\$ —	\$ —	\$ —	\$ —	\$ 65	\$ —	\$ 30	\$ 24	\$ —	\$ —	\$ —

¹ Paid to other ranks only.² Depending on rank on promotion.

The allowances shown in Table 1 are explained briefly as follows.

Subsistence Allowance.—This allowance is granted whenever rations and quarters are not provided. A married man living with his family uses his subsistence allowance for their maintenance as well as his own.

Ration Allowance.—A ration allowance is granted when quarters are available but rations are not provided. It is not payable concurrently with subsistence allowance.

Quarters Allowance.—A quarters allowance is granted when rations are provided but quarters are not available. It is not payable concurrently with subsistence allowance.

Marriage Allowance.—The amount of this allowance is \$30 a month for men and \$40 a month for officers, subject to a reduction of \$10 a month where permanent married quarters are occupied or \$2.50 a month where temporary married quarters are occupied. All ranks may draw this allowance upon marriage provided the age of 21 years has been attained by men and 23 years by officers.

Separated Family's Allowance.—An officer or man while separated from his dependants for any of various reasons (i.e., movement of dependants prohibited, illness of dependants, lack of suitable accommodation), on being moved other than temporarily, may be entitled to separated family's allowance at a rate and for a period depending on circumstances (i.e., rank, reason for separation, whether or not he has children, whether or not his family is accommodated in married quarters, whether or not he is provided with quarters and rations). The rates listed are the maximum.

In addition to the above, *Foreign Allowances* of various kinds are granted to officers and men posted for duty outside Canada to compensate for additional living expenses or hardships incurred; these vary with rank, appointment and location. *Isolation Allowances* are granted to officers and men serving at specified isolated posts in Canada at rates depending upon location and circumstances. *Outfit Allowances and Clothing Credits* are as follows: Officers receive a single payment of \$450 on appointment and Warrant Officers Class I, \$270; men receive a free issue of clothing when they join and thereafter a monthly clothing credit or allowance of \$7; Navy Petty Officers 1st class and above receive \$8; and women \$8. An *Aircrew Allowance* of \$75 a month is paid to an officer or man undergoing flying training. For qualified aircrew this allowance may be increased to \$150, depending on rank, if filling an appointment requiring active and continuous flying duties, and to \$100, depending on rank, for maintaining proficiency. *Submarine Allowance* is granted an officer or man undergoing submarine training or filling an appointment in a submarine; the allowance for trained submarine personnel varies from \$65 to \$115 a month depending on rank. An officer or man actively engaged or undergoing training as a parachutist or on flying or submarine duty and not entitled to aircrew allowance or submarine allowance is paid a *Risk Allowance* at the rate of \$30 a month. Medical, Dental and Legal Officers are granted extra allowances according to rank.

Command Structure.—The Canadian Forces are in the process of reorganization on a functional basis to reflect the major commitments assigned by the Government. Under this concept, all Forces devoted to a primary mission are grouped under a single commander who will be assigned sufficient resources to discharge his responsibilities. Specifically, the Canadian Forces will be formed into ten major organizational entities reporting to the Chief of the Defence Staff. These are as follows: (1) Mobile Command; (2) 4 Canadian Infantry Brigade Group; (3) 1 Air Division; (4) Maritime Command; (5) Air Defence Command; (6) Air Transport Command; (7) Training Command; (8) Materiel Command; (9) The Reserve and Emergency Measures Organization; and (10) The Canadian Forces Communication System.

The organizations stated for the three Services in Subsections 1, 2 and 3 following will continue to function for the present. However, they will be run down and absorbed in the new Commands as they become operational. It is expected that all Commands will be operational during 1966.

Subsection 1.—The Royal Canadian Navy

Role and Organization.—The role of the Royal Canadian Navy, in support of Canada's defence policy, is to maintain sea communications, to defend Canada against attack from the sea, to contribute to the collective defence of the NATO area against attack from the sea, and to contribute naval forces to the United Nations as may be required. It is substantially an anti-submarine (A/S) role.

The Royal Canadian Navy comes under the central authority of the Chief of the Defence Staff at Canadian Forces Headquarters in Ottawa. The Flag Officer Atlantic Coast, at Halifax, N.S., and the Flag Officer Pacific Coast, at Esquimalt, B.C., exercise operational and administrative command of ships and establishments within the Atlantic and Pacific Coast Commands. The Flag Officers also hold the additional appointments of Maritime Commander Atlantic and Maritime Commander Pacific, respectively. As such, each is responsible for anti-submarine operations involving RCN and RCAF forces in his Command. The 20 Naval Divisions of the Royal Canadian Naval Reserve are under the over-all command of the Commanding Officer Naval Divisions, with headquarters at Hamilton, Ont. There are naval staffs in London, England, and Washington, D.C., U.S.A., to maintain liaison with the Royal Navy and the United States Navy. As a result of Canada's NATO commitments, officers of the Royal Canadian Navy serve on the staffs of: the Supreme Allied Commander, Atlantic, at Norfolk, Va., in the United States; the Commander-in-Chief, Eastern Atlantic Area, at Northwood in Britain; and the Commander-in-Chief, Western Atlantic Area, at Norfolk, Va. The Flag Officer Atlantic Coast holds the NATO appointment of Commander, Canadian Atlantic Sub-Area.

The strength of the RCN on Sept. 30, 1965, was 19,201 officers, men and women in the regular force and 2,272 in the reserve force.

Fleet.—In September 1965 the RCN had 42 ships in commission and two submarines of the Royal Navy under RCN operational control at Halifax. During 1965, up to September, two new HMC ships and one Naval Auxiliary joined the Fleet: HMCS *Annapolis*, the last of the new destroyer escorts to be built, commissioned at Halifax on Dec. 19, 1964; HMCS *Ojibwa*, the first of the three 'O' Class conventional submarines being built for the RCN at Chatham, England, commissioned on Sept. 23, 1965; and the Canadian Naval Auxiliary Vessel *Endeavour*, an oceanographical research ship of 1,540 tons built at Esquimalt, B.C., for service on the Pacific Coast. The second 'O' Class submarine, *Onondaga*, was launched on Sept. 25, 1965 and the third, *Okanagan*, was laid down in March 1965. Also under construction in September 1965 was the fast hydrofoil craft FHE 400 and a second research vessel for service on the East Coast was in the planning stage. The last two of seven St. Laurent class destroyer escorts, *Margaree* and *Fraser*, were being converted to operate helicopters and work had started on *Terra Nova*, the first of seven ships of her class to undergo major modernization. By September, 13 CHSS-2 Sea King helicopters had been delivered to operate from the aircraft carrier *Bonaventure* and destroyer-escorts, and more will be delivered in 1966. The operational support ship HMCS *Provider* completed her first year with the Fleet and two more ships of the same type are projected. Eight ships were disposed of during the year, all of which were old destroyer escorts or ocean escorts.

Training.—The major training establishments of the RCN are HMCS *Cornwallis* near Digby, N.S.; HMCS *Shearwater* near Dartmouth, N.S.; HMCS *Stadacona* at Halifax, N.S.; HMCS *Hochelaga* at LaSalle, Que.; HMCS *Gloucester* near Ottawa, Ont.; and HMCS *Naden* at Esquimalt, B.C. Men and women entering the RCN receive their basic training at HMCS *Cornwallis*; the courses are normally 15 weeks in length. English language training is provided for French-speaking recruits at HMCS *Hochelaga*, lasting 16 weeks. Cadets entered under the Regular Officer Training Plan (ROTP) or College Training Plan (CTP) receive most of their early training at the Canadian Services Colleges (see p. 1116) or a Canadian university; those entered on a short-service appointment train in HMCS *Venture* at Esquimalt, B.C. All cadets receive practical training with the Fleet at various

times of the year. A University Naval Training Division program provides junior officers for the RCN and the RCN Reserve. The cadets are required to complete two winter-training periods and two summer-training periods and certified specified courses.

On Sept. 30, 1965, the RCN had approximately 800 men taking new-entry training, 1,400 men undergoing other training in the various trade areas, and 550 cadets and 200 officers on courses.

Royal Canadian Naval Reserve.—The recruiting and training of officers and men of the RCN Reserve is conducted mainly through 16 Naval Divisions across Canada under the over-all command of the Commanding Officer Naval Divisions, with Headquarters at Hamilton, Ont. Naval Divisions are established in the following centres:—

St. John's, Nfld., HMCS *Cabot*
Halifax, N.S., HMCS *Scotian*
Saint John, N.B., HMCS *Brunswick*
Quebec, Que., HMCS *Montcalm*
Montreal, Que., HMCS *Donnacona*
Toronto, Ont., HMCS *York*
Ottawa, Ont., HMCS *Carleton*
Kingston, Ont., HMCS *Cataragui*

Hamilton, Ont., HMCS *Star*
Windsor, Ont., HMCS *Hunter*
Port Arthur, Ont., HMCS *Griffon*
Winnipeg, Man., HMCS *Chippawa*
Saskatoon, Sask., HMCS *Unicorn*
Calgary, Alta., HMCS *Tecumseh*
Vancouver, B.C., HMCS *Discovery*
Victoria, B.C., HMCS *Malahat*

Naval Divisions, commanded by Reserve officers, provide both basic and specialized training for officers and men of the RCN Reserve. The Great Lakes Training Centre at Hamilton conducts new-entry reserve training afloat during the summer months.

Royal Canadian Sea Cadets.—Royal Canadian Sea Cadets, sponsored by the Navy League of Canada and supported by the RCN, consist of 167 corps, supervised by 16 naval officers responsible to the Commanding Officer Naval Divisions. Instruction is carried out by RCSCC officers. Two training establishments—*Cornwallis* on the East Coast and *Quadra* on the West Coast—accommodate officers and cadets for two-week training periods in the summer. In addition, selected cadets receive a seven-week training course at naval establishments. Sea experience is provided throughout the year in various types of ships of the RCN. In August 1965, the strength of the corps was 1,060 officers and 9,111 cadets.

Subsection 2.—The Canadian Army

Role and Organization.—The role of the Canadian Army in support of Canada's defence policy is to contribute to and support NATO forces overseas, to contribute to and support the North American regional defence, to contribute Army forces to the United Nations as may be required and to undertake survival operations in Canada when necessary. The Canadian Army comes under the central authority of the Chief of the Defence Staff at Canadian Forces Headquarters in Ottawa and is divided for command and control into Commands and Areas with Headquarters as follows:—

<i>Command</i>	<i>Headquarters</i>	<i>Area and Headquarters</i>
Eastern Command.....	Halifax, N.S.....	(1) New Brunswick Area, Fredericton, N.B. (2) Newfoundland Area, St. John's, Nfld. (3) Nova Scotia-Prince Edward Island Area, Halifax, N.S.
Quebec Command.....	Montreal, Que.....	(4) Eastern Quebec Area, Quebec, Que.
Central Command.....	Oakville, Ont.....	(5) Eastern Ontario Area, Kingston, Ont. (6) Central Ontario Area, Oakville, Ont. (7) Western Ontario Area, London, Ont.
Western Command.....	Edmonton, Alta.....	(8) British Columbia Area, Vancouver, B.C. (9) Alberta Area, Edmonton, Alta. (10) Saskatchewan Area, Regina, Sask. (11) Manitoba Area, Winnipeg, Man.

The Canadian Army comprises the Canadian Army (Regular) and the Reserves. The Canadian Army (Regular) consists of a field force of four Infantry Brigade Groups, headquarters and administrative, training and logistic support units. One of the Infantry Brigade Groups is in Europe with the NATO Force and is under command of the Supreme Allied Commander in Europe. The Reserves include the Canadian Army (Militia), the Regular Reserve, the Supplementary Reserve, the Canadian Officers' Training Corps, the Cadet Services of Canada and the Reserve Militia. Additional to but not an integral part of the Canadian Army are the Services Colleges, officially authorized cadet corps, rifle associations and clubs.

At Sept. 30, 1965, the strength of the Canadian Army (Regular) was 44,767 officers and men and the strength of the Canadian Army (Militia) was 31,740, including personnel taking the special militia training courses.

Operations in 1964.—In fulfilment of military obligations under the North Atlantic Treaty, Canada continued to provide ground forces for the defence of Western Europe. The 4th Canadian Infantry Brigade Group, the major units of which were the Fort Garry Horse, the 2nd Regiment Royal Canadian Horse Artillery, No. 1 Surface to Surface Missile Battery, 1st Battalion The Royal Canadian Regiment, 1st Battalion Princess Patricia's Canadian Light Infantry and the 2nd Battalion The Black Watch (Royal Highland Regiment) of Canada, constituted the Canadian Army contribution to NATO in Germany. The Headquarters of the Brigade is at Soest and married quarters are located in the vicinity of Soest, Werl, Hemer and Iserlohn. In March 1964, Canada agreed to provide one battalion group to form part of Allied Command Europe Mobile Forces (Land Component). This battalion group was stationed in Canada but held in readiness for employment should the Mobile Forces be activated.

The Canadian Army continued to provide forces in support of United Nations operations as follows. (1) A force of approximately 870 officers and men forms a part of the United Nations Emergency Force in the Middle East, with tasks of patrolling a sector of the Egypt-Israel international frontier, and providing engineer services, communications, stores, transport, workshop and postal services for the Force. (2) Until withdrawn in July 1964, 57 Canadian Signals Unit, with a strength of approximately 310 officers and men, supported the United Nations Force in the Congo by providing communications, staff officers and other headquarters personnel; the bulk of the unit was stationed in Leopoldville with signal detachments at subordinate headquarters throughout the country. (3) Canadian Army contributions to other United Nations commissions included some 27 officers employed in Palestine, Kashmir and Korea.

In March 1964, in response to a request from the United Nations, an infantry battalion, a reconnaissance squadron, a brigade headquarters and a Canadian element for the UN Headquarters were dispatched to Cyprus to form part of the United Nations Force in Cyprus. At the end of the year the Canadian Contingent, totalling approximately 1,150 men, consisted of 1st Battalion the Canadian Guards, a Reconnaissance Squadron from the Lord Strathcona's Horse (RC) and Headquarters 3 Canadian Infantry Brigade Group which acted as the UN Headquarters for Nicosia Zone. A specially trained and equipped infantry battalion was maintained on standby in Canada to provide at short notice a force for service in support of the United Nations in any part of the world. In addition to its United Nations commitments, the Canadian Army, as a result of Canadian participation in the International Commissions for Supervision and Control in Viet Nam, Cambodia and Laos, continued to provide approximately 75 officers and men for truce supervisory duties in Indo-China.

During 1964, the Canadian Armed Forces Training Team was maintained in Ghana to assist in the training of the Ghana armed forces. The Canadian Army provided 23 of the members of the team, the Royal Canadian Navy three, and the Royal Canadian Air Force four. An officer of the Royal Canadian Engineers was employed on map-making duties in Nigeria. A number of officer cadets from Tanzania, Zambia, Nigeria and Jamaica have received training in Canadian Army schools.

Training.—The training policy for the Canadian Army (Regular) is determined at Canadian Forces Headquarters. General Officers Commanding Commands implement the training policies within their Commands except for that conducted at army and corps schools under the supervision of Canadian Forces Headquarters. On Sept. 15, 1965, a newly formed Training Command Headquarters (Army Component) assumed the latter responsibility. During 1964, the basic training of 3,579 recruits and the corps training of officers and men of the Canadian Army were carried out at regimental depots, units and corps schools, and 10,796 personnel attended courses at the schools of instruction; 397 officers completed promotion qualification examinations; 75 officers attended the Canadian Army Staff College and six commenced courses at Commonwealth Staff Colleges. Qualifying courses for junior NCO's were conducted under General Officers Commanding Commands and senior NCO courses were conducted at corps schools. Officers from the RCN and the RCAF as well as officers from Australia, Britain, Germany, India, Pakistan, Tanzania, Jamaica, Zambia and the United States attended courses at Canadian Army schools of instruction.

English and French language training, which is available to all ranks of the Canadian Army, is conducted by Commands and CFHQ. The R22eR Depot (Language Training Company) conducts six-month French language courses for English-speaking officers and NCO's and a number of French-speaking recruits and potential NCO's receive English language training.

Trade and specialty training is given at corps schools and units. When required, the facilities of civilian schools are used to supplement training at Army establishments. Under an apprentice training program, selected young men are trained as soldier tradesmen and prepared for advancement to senior non-commissioned ranks. During 1964, an additional 397 apprentices were enrolled and 45 civilian teachers were employed to provide academic instruction for about 900 apprentice soldiers. Academic credits are obtained from the educational authorities of the province where the training is conducted.

The training of the Field Force Canada airborne/air transportable element continued during 1964. Airborne continuation training was carried out by each unit in conjunction with unit exercises. Units carried out exercises during the winter under cold weather conditions. Parachute and air supply courses were conducted at the Canadian Joint Air Training Centre at Rivers, Man., and courses in Arctic training at Fort Churchill, Man. Collective training for units in Canada was carried out during the summer months at Camp Gagetown, N.B., and Camp Wainwright, Alta. All-arms training comprised sub-unit and unit training and culminated in exercises at the Brigade Group level.

Under the Regular Officer Training Plan (ROTP), selected students are trained for commissions in the Canadian Army (Regular) at the Canadian Services Colleges (see p. 1116) and at Canadian universities and colleges that have university reserve contingents. Also, units of the Canadian Officers' Training Corps (COTC) form an integral part of the campus life at most Canadian universities. These contingents are maintained primarily to produce officers for the Reserve component of the Army and receive training similar to that given members of the ROTP.

Canadian Army (Militia).—The recently revised priority of roles of the Militia are: support of the Regular Army; provision of a training force; and assistance for internal security and the provision of specialists to assist in staffing national survival installations in times of national emergency. Militia training is intended to produce personnel and units well trained in the basic military skills and techniques of their corps and in the basic skills for survival operations. In consonance with these newly assigned roles, the Militia was extensively reorganized during the period November 1964–March 1965. Based largely upon recommendations of the Ministerial Commission on the Reorganization of the Canadian Army (Militia), a total of 176 self-accounting units, having an approved establishment of 41,807 all ranks, was authorized. Concurrently, personnel and training policies were revised. Emphasis has been placed on youth, physical fitness, professional competence and vigorous leadership.

Royal Canadian Army Cadets.—The aim of the Army Cadet organization is to provide cadets with a sound knowledge of military fundamentals based on the qualities of leadership, patriotism and good citizenship. Planning and the supervision of organization, administration and training are carried out by the Canadian Army (Regular), and 129 officers and men are employed continuously on these duties. Training and administration of Army cadets is the responsibility of officers of the Cadet Services of Canada, a sub-component of the Reserves, and civilian instructors. As of June 30, 1965, cadet and civilian instructors numbered 2,253.

Cadets, aged 14-18 inclusive, take a progressive three-year course in basic military subjects at their cadet corps and selected cadets are given training at summer camps. In 1964, 5,339 cadets attended seven-week trades and specialist courses at Aldershot, N.S., Farnham, Que., Picton, Ipperwash and Camp Borden, Ont., Clear Lake, Man., and Vernon, B.C.; 1,482 cadets attended two-week cadet leader and special camps at Aldershot, N.S., Picton, Ont., and Clear Lake and Rivers, Man.; 212 master cadets attended the National Cadet Camp at Banff, Alta., for four weeks; 58 cadets proceeded on an exchange of cadets between Canada and Barbados, Jamaica and Trinidad and Tobago during the summer of 1965; 441 cadet instructors attended qualifying courses of up to seven weeks and 491 cadet and civilian instructors were employed in training and administrative duties at summer camps. As of September 1965, there were 66,529 cadets enrolled in 503 corps.

Subsection 3.—The Royal Canadian Air Force

Role and Organization.—The role of the Royal Canadian Air Force in support of Canada's defence policy is to provide forces in being for the defence of the North American Continent and the NATO area and the support of the United Nations. The Royal Canadian Air Force comes under the central authority of the Chief of the Defence Staff at the Canadian Forces Headquarters in Ottawa. The major RCAF Formations and their Headquarters are as follows:—

<u>Formations</u>	<u>Headquarters</u>
Air Defence Command.....	St. Hubert, Que.
No. 1 Air Division.....	Metz, France
Air Transport Command.....	Trenton, Ont.
Air Materiel Command.....	Rockcliffe, Ont.
Maritime Air Command.....	Halifax, N.S.
Training Command.....	Winnipeg, Man.

The organization includes 20 flying squadrons of the RCAF Regular and six flying squadrons of the RCAF Auxiliary. The Auxiliary squadrons perform an emergency and rescue role. Three of the regular squadrons contribute to the air defence of the Canada-United States Regions; eight squadrons are assigned to No. 1 Air Division in Europe; four squadrons are required for RCAF transport operations at home and abroad; four maritime squadrons operate in conjunction with other forces for the defence of Canada's East and West Coasts; and one squadron carries out Army support training, aerial photography and reconnaissance functions in Canada.

The strength of the RCAF at Sept. 30, 1965 was 46,385 officers and men in the Regular Force and 833 in the Auxiliary Force.

Operations in 1965.—The RCAF contribution to the air defence of North America, consisting of three CF101B squadrons, two Bomarc squadrons and 29 radar sites, continued under the operational control of North American Air Defence Command (NORAD). The Distant Early Warning Line (DEW) continued to operate as an integral part of NORAD. No. 1 Air Division, Canada's NATO contribution in Europe was equipped with eight squadrons of CF104 aircraft. Six of these squadrons were employed in the strike/attack role and two were employed in the photo reconnaissance role.

The RCAF Maritime Air Command during 1965 contributed four land-based maritime squadrons to the Maritime Defence of North America; three of these, based on the East Coast, were equipped with *Argus* aircraft, the largest and most modern anti-submarine aircraft in the world. A continuous program of aircraft modernization and re-equipping with improved anti-submarine devices was conducted throughout the year. The East Coast squadrons and a *Neptune* aircraft squadron on the West Coast participated in a number of national, international and NATO anti-submarine exercises and maintained daily patrols and surveillance of ocean areas adjacent to the Canadian coastline. Early in 1966, RCAF Maritime Air Command will become an integral part of the new integrated Maritime Command.

Air Transport Command (ATC) continued to provide support to the Air Division and to the Army Brigade in Europe using the *Yukon* and *Hercules* (C130B and C130E) aircraft. Airlift support was also given to the United Nations Emergency Force Middle East and the United Nations in Cyprus using *Yukon*, *North Star* and *Hercules* aircraft. In addition, flying units operating *Caribou* and *Otter* aircraft were maintained in Egypt and India/Pakistan in support of UNEF, UNMOGIP and UNIPOM. In Canada, ATC aircraft airlifted Department of National Defence personnel and cargo over air routes from coast to coast. C119 and C130 aircraft were used for paratroop training of the Canadian Army, and 408 Squadron carried out routine photographic missions for the Department of National Defence. Search and rescue services were provided in Canadian areas of responsibility. Of the 10 major air searches conducted, nine were for civil aircraft and one was for military aircraft. In addition, there was one major marine search and 212 mercy missions.

Training.—Each year the RCAF gives basic training to several thousand officers and men to meet retirements, releases and the introduction of new equipment. English language training on initial enlistment is given to French-speaking personnel—at Centralia, Ont., for officers and at St. Jean, Que., for airmen. Course length is variable, up to a maximum of 21 weeks. Advanced trades training is given within the service, training on specialized equipment is obtained also from industrial firms, and some officers attend postgraduate courses at Canadian and United States universities. In addition, aircraft trades training is given to a number of trainees from developing countries. Aircrew selection is carried out at Officers Selection Unit, Centralia. RCAF pilots are given basic and advanced jet training at Moose Jaw, Sask., and Gimli, Man., and advanced multi-engine training at Portage la Prairie, Man., and navigators are trained at Winnipeg, Man. In the year ending Mar. 31, 1966, approximately 130 RCAF pilots and 100 navigators will complete training to "wings" standard; pilot training on piston-engined aircraft will be provided for 45 RCN and 25 CA(R) officers. Under bilateral agreements, jet training will be provided for 35 Danish and 25 Norwegian pilots, navigation training for three Norwegian and two Danish navigators, and piston-engine training for 15 Malaysian and 26 Tanzanian pilots.

Technical and indoctrination training for newly commissioned non-flying list officers is given at Central Officers School at Centralia. Basic and advanced trades training for airmen is given at the RCAF technical trades schools at Camp Borden or Clinton in Ontario. Staff training at the junior and senior level is given at Air Force College, Toronto; the two formal courses are bridged by a correspondence, self-study course. Trade advancement training to help airmen improve their job proficiency and to qualify for higher trade groupings and pay is provided to Regular Force and Reserve personnel. Operational training on specific aircraft and equipment is given at field technical training units and operational training units situated throughout Canada. Semi-annual trade examinations are written under the direction of the Training Standards Establishments, Trenton, Ont.

RCAF Reserves.—The active sub-components of the RCAF Reserves are designated as the Auxiliary and the Primary Reserve.

The Auxiliary is made up of four Auxiliary Wing Headquarters located in Montreal, Toronto, Winnipeg and Edmonton and six Flying Squadrons located in the same cities;

Wing Headquarters direct the operations, training and administration of the Flying Squadrons in their respective areas. All Flying Squadrons are equipped with two types of transport aircraft—the C-45 *Expeditor* and the DHC-3 *Otter*. Their role is light transport, national survival, and search and rescue services. Light transport and national survival exercises are carried out in conjunction with Regular and Reserve formations of the RCN and the Canadian Army as well as the RCAF. Search and rescue operations are often carried out in accompaniment with civilian and RCAF Regular counterparts. In the event of emergency, these squadrons would be used to support civilian and military requirements.

The Primary Reserve is composed of Air Cadet Officers who staff the Royal Canadian Air Cadet Squadrons throughout Canada, of Manning Support Officers who are employed for 15 to 30 days each year in career counselling duties at RCAF recruiting units, and of University Squadron Staff Officers whose main function is to train members of the University Reserve Training Plan (URTP) during the academic year.

Each summer, approximately 130 first-year URTP undergraduates attend an officers training course at Reserve Officers School, Centralia. Following this initial training, specialized training is provided in aeronautical engineering, armament, administration, accounts, construction engineering, mobile support equipment, recreation, supply or telecommunications. Second-year cadets continue the formal or contact training begun the previous year and a small number of outstanding cadets is selected for a third summer of contact training at a field unit.

Royal Canadian Air Cadets.—Air cadet activities are sponsored and administered by the Air Cadet League of Canada, a voluntary civilian organization. The objectives of air cadet training are to develop the attributes of good citizenship, to stimulate an interest in aviation and space technology and to develop a high standard of physical fitness, mental alertness and discipline. The Canadian Armed Forces work in partnership with the League and provide training personnel, syllabi and equipment.

The authorized ceiling of cadet enrolment is 28,000; the strength at Oct. 1, 1965 was approximately 27,500 attached to 365 squadrons across Canada. During the summer of 1965, camps were conducted at RCAF Stations at Greenwood, N.S., St. Jean, Que., Trenton, Ont., and Namao, Alta., attended by more than 7,000 cadets and 500 officers and instructors. A seven-week course for senior leaders was held for 240 cadets at Camp Borden, Ont. Under the International Exchange Visits Program for 1965, sponsored jointly by the Canadian Armed Forces and the Air Cadet League, 60 cadets were exchanged with Belgium, Britain, Denmark, France, Israel, the Netherlands, Norway, Sweden, Turkey, the United States and West Germany.

About 250 senior Air Cadets receive flying training annually at flying clubs through scholarships provided by the Canadian Armed Forces and additional scholarships are awarded by the Air Cadet League and other organizations, which in 1965 numbered 80.

Subsection 4.—The Defence Research Board

The Defence Research Board, established in 1947, provides scientific assistance and advice to the Canadian Forces. It consists of a full-time chairman and vice-chairman, two or more ex officio members and nine other appointed members. The ex officio members are the Deputy Minister of National Defence, the President of the National Research Council and such other members as may be appointed by the Minister of National Defence as members representing the Canadian Forces. The other members, appointed by the Governor in Council for three-year terms, are selected from universities and industry because of their scientific and technical backgrounds.

The organization consists of headquarters staff, an operational research corps and seven research laboratories, and liaison offices at London, England, and Washington, U.S.A. Advisory committees composed of leading Canadian scientists provide invaluable assistance to the Board by their consideration of a variety of problems.

The Defence Research Board is an integral and permanent part of the defences of the country. The Chairman is a member of the Defence Council. The Board's fundamental purpose is to correlate the special scientific requirements of the Armed Forces with the general research activities of the scientific community at large. Its efforts are concentrated upon defence problems of particular importance to Canada or for which Canada has unique resources or facilities. Existing research facilities such as those of the National Research Council are used whenever possible to meet the needs of the Armed Forces. The Board has built up new facilities only in those fields that have little or no civilian interest. Close collaboration is maintained with Canada's larger partners; specialization is made possible only through the willingness of Britain and the United States to exchange the results of their broader programs for the less numerous but nevertheless valuable benefits of Canadian research.

The Board operates seven specialized research and development laboratories which are concerned primarily with maritime warfare, guns, rockets and missiles as armaments, defence against missiles, research on the upper atmosphere using ground-based equipment as well as balloons, rockets and satellites, propulsion and propellants, telecommunications, geophysical studies of the Arctic, defence against atomic, chemical and biological weapons, studies of shock and blast, biosciences research and operational research. The Board also supports and organizes an extramural program of research in the universities and industry. Some 200 grants are awarded annually to Canadian university staff members for research on problems of defence interest and a special fund is used to place contracts with industry for research in selected fields.

Research on maritime warfare problems, particularly those relating to submarine detection and tracking, is carried out at the Naval Research Establishment, Dartmouth, N.S., and at the Pacific Naval Laboratory, Esquimalt, B.C. Research and development of weapons and defence against various weapons is undertaken in co-operation with the Armed Services at several establishments, the largest of which is the Canadian Armament Research and Development Establishment near Valcartier, Que. Its principal activities include studies of defence against missiles, studies of the properties and application of infrared and other detection devices, exploration of the upper atmosphere with balloons and rockets, and the development of rocket propellants.

The Defence Research Telecommunications Establishment in Ottawa is concerned mainly with problems of communications which involve exploration of the ionosphere with ground-based equipment, with rockets and with satellites, and the applications of the science of electronics to military problems. Research on the defensive aspects of chemical, biological and atomic weapons is carried out at two Defence Research Board establishments—the Defence Chemical, Biological and Radiation Laboratories at Ottawa, Ont., and the Suffield Experimental Station at Ralston, Alta.

The Defence Research Medical Laboratories near Toronto are concerned with biosciences research, chiefly with raising the operating efficiency of man working in the military environment, and includes such subjects as human physiology, experimental psychology and research on clothing.

Operational research is carried on by an integrated headquarters group which conducts long-range scientific analysis of future defence problems. The staff consists of operational research scientists provided by the Board and service officers. The Board also provides operational research scientists as members of teams in the various Service Commands.

Thus, the Board continues to support the fields of research that are of foremost interest to the Canadian Armed Services and the program is under continuing review to ensure that cognizance is taken of all changes in emphasis in defence requirements. Close liaison is maintained between the Defence Research Board and the Department of Defence Production to ensure that research and development activities are closely integrated with production.

Section 2.—Services Colleges and Staff Training Colleges

Canadian Services Colleges.—The three Canadian Services Colleges are the Royal Military College of Canada founded at Kingston, Ont., in 1876, Royal Roads which was established in 1941 near Victoria, B.C., as a school for naval officers, and Collège militaire royal de Saint-Jean established at St. Jean, Que., primarily to meet the needs of French-speaking cadets. The Royal Military College and Royal Roads were constituted as Canadian Services Colleges in 1948, and Collège militaire royal de Saint-Jean was opened in 1952. In 1959, the Legislature of the Province of Ontario granted the Royal Military College a charter empowering it to grant degrees.

The purpose of the instruction and training at the Services Colleges is to impart the knowledge, to teach the skills and to develop the qualities of character and leadership essential to officers of all three Armed Services. The courses of instruction provide a sound and balanced liberal scientific and military education leading to degrees in arts, science and engineering which are granted by the Royal Military College.

For cadets entering the Royal Military College and Royal Roads, the course is of four years duration. As the third and fourth years of the course are given only at the Royal Military College, cadets entering Royal Roads must proceed to that College for the final two years of the arts, science or engineering courses. For cadets entering Collège militaire royal de Saint-Jean, which gives a preparatory year, the course is of five years duration. Cadets take the preparatory, first and second years at that institution and the final two years at the Royal Military College.

For admission to the Royal Military College of Canada and to Royal Roads, an applicant must have obtained senior matriculation or equivalent standing. The compulsory subjects are: English, mathematics (algebra, geometry and trigonometry), physics, chemistry and either a language or history; junior matriculation standing in French is desirable. For admission to Collège militaire royal de Saint-Jean, an applicant must have junior matriculation or equivalent. The compulsory subjects are: English (for English-speaking applicants), French (for French-speaking applicants), algebra, plane geometry, physics and chemistry. Applicants from classical colleges must have sixth year standing (rhétorique). A candidate who has obtained a Bachelor of Arts degree at a classical college or has completed first year science or philosophy II at Collège Mont Saint-Louis may apply for entry into first year at Collège militaire royal de Saint-Jean. A candidate must be single, a Canadian citizen or British subject normally resident in Canada, and be physically fit. The age limits for admission to the first year are between 16 and 21 years as of Jan. 1 of the year of entry; for admission to the preparatory year a cadet must have reached his 16th but not his 20th birthday on Jan. 1 of the year of entry.

Most cadets entering the Services Colleges enrol under the Regular Officer Training Plan. Applicants accepted enrol according to their choice, as officer cadets in the Royal Canadian Navy, the Canadian Army or the Royal Canadian Air Force. Costs of tuition, board, lodging, uniforms, books, instruments and other fees are borne by the Department of National Defence and cadets are paid \$78 a month. On successfully completing their academic and military training, cadets are granted permanent commissions in the Regular Force.

A limited number of high school students may be selected to enter the Services Colleges on payment of tuition fees, etc. Graduates are granted commissions and serve in the Reserve components of the Forces. Young men who qualify for Dominion Cadetships also serve in a reserve capacity. These Cadetships are awarded by the Federal Government in recognition of a candidate's parent having been killed, died or been severely incapacitated in the service of one of Canada's Armed Forces. A maximum of 15 Dominion Cadetships may be awarded in any one year, five in each Service. Each is valued at \$580, which covers first-year fees.

During the 1964-65 academic year, 1,115 cadets were in attendance at the Services Colleges, 521 of them at the Royal Military College, 199 at Royal Roads, and 395 at Collège militaire royal de Saint-Jean. Of the total, 238 were enrolled in the Navy, 390 in the Army and 487 in the Air Force.

Staff Training Colleges.—The Canadian Army Staff College at Kingston, Ont., gives an 11-month course for the training of officers for staff appointments. Although most of the student body is composed of Canadian Army officers, officers from the other two Services and from the armies of other Commonwealth and NATO countries also attend. Instruction is based upon the study of précis and references, demonstrations and lectures, and indoor and outdoor exercises. Aside from purely military subjects, the curriculum includes national survival, research and development, world affairs and lectures by prominent guest speakers.

The Royal Canadian Air Force College at Armour Heights in Toronto, Ont., consists of a Staff College for senior officers, and a Staff School and an Extension School for junior officers. The former affords professional education for officers normally of Squadron Leader and Wing Commander ranks, preparing them to assume higher appointments. The directing staff selected from the Royal Canadian Air Force is augmented by an officer from each of the Royal Canadian Navy, the Canadian Army and the Royal Air Force. The student body, in addition to Royal Canadian Air Force officers, has ten representatives from the Royal Canadian Navy and one or two from each of the Canadian Army, Royal Air Force and United States Air Force. The College course is designed to assist the student to think logically and express his ideas with precision, both orally and in writing; to know his Service and understand the employment of air forces; to keep abreast of scientific and technical developments that may affect the employment of air forces; and to gain a perspective of national and international problems. The 14-week course given at the Staff School and the Extension School provides junior officers with the professional skills and knowledge needed at Flight Lieutenant and Squadron Leader ranks and introduces them to further professional studies. The student comes to the course with one or more tours of specialist employment behind him. The Extension School provides a course of correspondence study to enable graduates to consolidate and expand the knowledge gained at the Staff School, to practise skills of logical thought and the accurate presentation of ideas, and in general to prepare for the acceptance of greater responsibilities in their present or higher ranks.

The National Defence College at Kingston, Ont., is a senior defence college providing an 11-month course of study covering the economic, political and military aspects of the defence of Canada. Senior officers and civil servants from the Armed Forces and government departments attend, as well as a few representatives from industry. Lecturers are chosen from among the leaders in various fields in Canada, the United States, Britain and other countries. In addition, educational tours and visits to certain parts of Canada, the United States, Europe and the Middle East give students more knowledge of conditions and influences in their own and other countries.

PART II.—DEFENCE PRODUCTION*

Under the provisions of the Defence Production Act (RSC 1952, c. 62, as amended), the Department of Defence Production has exclusive authority to procure the goods and services required by the Department of National Defence and the responsibility to ensure that the necessary productive capacity, capability and materials are available to support the defence production program. The latter responsibility includes defence development and production-sharing with the United States, defence production export activities with NATO and other friendly countries, and co-operation in research, development and production programs within the NATO alliance. The Department also provides management and staff for the Canadian Commercial Corporation, a Crown company primarily responsible for the contracting in Canada for defence goods purchased by other governments and for

* Prepared in the Information Division, Department of Defence Production, Ottawa.

contracting for supplies to meet Canadian requirements under External Aid Programs and other international agreements. The Department is responsible for planning and making other necessary arrangements for the immediate establishment of a war supplies agency, should there be a nuclear attack.

Implementing recommendations of the Royal Commission on Government Organization, the Government assigned to the Department of Defence Production the responsibility for forming a central purchasing and supply agency. The plan of organization for a future Department of Supply prepared by the Department requires the integration of the purchasing organization of Defence Production with supply functions. These supply functions were grouped with the regional purchasing function of Defence Production and Crown Assets Disposal Corporation to form the Canadian Government Supply Service.

Procurement and construction contracts issued by the Department of Defence Production and Defence Construction (1951) Limited* had a net value of \$657,985,000 in 1964 and \$395,317,000 in the first half of 1965. (The net value of contracts is made up of the value of new contracts issued as well as amendments that increased or decreased existing contracts.) The net value of contracts in 1964 according to the various sources for which they were issued was as follows:—

<u>Source</u>	<u>Net Value</u>	<u>P.C. of Total Value</u>
	<u>\$</u>	
Department of National Defence.....	497,158,284	75.56
Department of Defence Production (DDP Votes).....	9,564,568	1.45
Foreign Governments—		
United States.....	84,556,999	12.85
Britain.....	2,018,381	0.31
Other.....	15,842,051	2.41
Canadian Sources other than DND and DDP—		
External Aid.....	13,075,616	1.99
Other.....	35,769,053	5.43
TOTALS.....	657,984,952	100.00

The \$497,158,000 in contracts placed by the Department of National Defence in 1964 was 4.8 p.c. below the value in 1963. The largest decrease was in the aircraft program; net value of aircraft contracts amounted to \$146,050,000 against \$167,545,000 in 1963. There was also a decrease of \$11,032,000 in the electronics and communications equipment program, and of \$4,228,000 in the shipbuilding program. On the other hand, there was an increase of \$9,997,000 in tank-automotive contracts and of \$7,115,000 in armament contracts.

Contracts placed outside Canada on behalf of the Department of National Defence in 1964 amounted to \$99,037,000, which was 20 p.c. of the total net value of prime contracts issued. Contracts valued at \$70,951,000 were placed in the United States, \$21,114,000 in Britain and \$6,972,000 in other countries. Expenditure on all contracts placed in 1964 was \$546,232,000, an amount 4.1 p.c. higher than in 1963. Expenditure against aircraft programs increased by \$16,483,000 or 9.4 p.c. and that for tank-automotive by \$14,748,000 or 136.5 p.c.

Of the \$397,317,000 in contracts issued during the first half of 1965, \$279,147,000 or 71 p.c. was for the Department of National Defence and expenditure against prime contracts placed for that Department stood at \$264,448,000. The Department of Defence Production placed \$9,565,000 in contracts in 1964 and \$191,000 in the first half of 1965 against certain appropriations to assist Canadian defence industries. Revolving Fund contracts amounted to \$49,325,000 in 1964, primarily to make funds available in connection with the Canada-United States F-104G Mutual Aid Program (MAP); Revolving Fund contracts amounted to \$8,839,000 in the first half of 1965.

* Military construction is the prime function of Defence Construction (1951) Limited; responsibility for that agency was transferred from the Minister of Defence Production to the Minister of National Defence on Apr. 22, 1965.

Contracts placed for all sources other than the Departments of National Defence and Defence Production totalled \$151,261,000 in 1964, of which \$84,557,000 was for the United States Government and \$2,018,000 for the British Government.

Defence Production and Development Sharing.—In 1964, \$166,800,000 worth of United States defence production-sharing business was placed with Canadian industry, an increase of 16.8 p.c. over 1963. The higher level in 1964 was partly accounted for by an increased level of incremental funding on the F-104G MAP aircraft program. The total United States defence production-sharing business in Canada during the six years of the program was \$914,700,000.

United States inquiries to Canadian industry increased from 12,858 in 1963 to 19,654 in 1964, and responses by Canadian companies from 2,853 to 3,509. Prime contracts placed by the United States Government with the Canadian Commercial Corporation increased from 1,130 to 1,548, the latter having a total value of \$89,900,000. Subcontracts received directly by Canadian firms increased from 2,075 to 2,445 valued at \$74,800,000. Other prime contracts received directly from the United States Government by Canadian industry and other institutions had a value of \$2,000,000.

In 1964, assistance was given to Canadian industry under the development-sharing program for research and development projects of interest to the United States Services; contracts amounting to \$27,800,000 were issued, with expenditure totalling \$20,000,000.

Co-operation in NATO and RDP (Research, Development and Production) and Exports Overseas.—Canadian industry is encouraged to participate in supplying the defence needs of European and other countries in such areas as aircraft, training and navigational aids and engine spares. During 1964, 77 Canadian firms reported the receipt of \$59,770,000 in prime contracts and subcontracts from 40 NATO and other countries (excluding the United States), although over 90 p.c. of this business came from 11 countries. Of the total, which was an increase of 12 p.c. over 1963, prime contracts accounted for \$48,564,000 and subcontracts placed in Canada by overseas countries for \$11,206,000. The major purchases in this group were for *Caribou*, *Beaver* and *Otter* aircraft, F-104G simulators, rocket launchers and nose-cap assemblies for the NATO M-72 light anti-tank weapon program, navigational equipment for the F-104G aircraft, spares for vehicles, aircraft and aircraft engines, and a contribution to the shared development of the CL-89 surveillance drone.

During 1964, Canadian defence contracts placed in overseas countries on behalf of the Canadian Armed Services amounted to \$43,169,000, consisting of \$24,973,000 in prime contracts and \$18,196,000 in subcontracts, so that Canada benefited from this exchange of defence contracting by \$16,601,000.

PART III.—CIVIL EMERGENCY PLANNING (CIVIL DEFENCE)*

The present arrangements for civil emergency planning in Canada took form in 1958 following an analysis by the Canadian Government of the kind of military and civilian arrangements necessary to prepare the nation for the possibility of nuclear war. This review led to a major rearrangement of federal civil defence functions, together with an offer from the Federal Government to assume certain responsibilities previously borne by provinces and municipalities. The reorganization, which became effective on Sept. 1, 1959, was based on the principles that: (1) civil defence was properly a function or activity of government rather than a separate organization as such, and (2) this function should be divided into clearly defined tasks assigned to the appropriate levels of government, and at each governmental level made the responsibility of those departments or agencies best able to undertake and discharge them.

* Prepared (November 1965) by the Director General of the Emergency Measures Organization, Ottawa.

The Emergency Measures Organization is the federal co-ordinating agency for all civil emergency planning. The Civil Emergency Measures Planning Order (Order in Council PC 1965-1041) dated June 8, 1965, defines the functions of the Emergency Measures Organization, designates it as a department for administrative purposes and places it under the control and supervision of the Minister of Industry. Its functions include:—

- (1) the development of policies and a program to ensure the continuity of government in an emergency;
- (2) the co-ordination of civil emergency planning and training within the Federal Government;
- (3) in conjunction with provincial authorities, the development of policies and a program for the control of civil road transport resources;
- (4) the provision of assistance and guidance to provincial governments and municipalities in respect of the preparation of civil emergency measures in matters that are not the responsibility of a department of the Federal Government;
- (5) the provision of general liaison with other countries and with the North Atlantic Treaty Organization on matters relating to civil emergency measures; and
- (6) the responsibility for the direction and administration of the Canadian Emergency Measures College at Arnprior, Ont.

The Civil Emergency Measures Planning Order also defines the civil emergency powers, duties and functions of the Ministers of federal departments and agencies having immediate responsibilities in the event of a war emergency. Included in this category are the Departments of Agriculture, Defence Production, External Affairs, Finance, Fisheries, Justice, Labour and the National Employment Service, National Defence, National Health and Welfare, Post Office, Public Works, and Transport and the Canadian Broadcasting Corporation and the Royal Canadian Mounted Police.

Certain emergency functions of government are a projection of normal provincial peacetime responsibility. In these fields, provinces and municipalities have more experience and knowledge of local conditions and problems than have the Federal Government and its agencies. The following represent responsibilities of this kind, and are the concern of provincial authorities with such federal assistance as may be necessary:—

- (1) Preservation of law and order and the prevention of panic by the use of provincial and municipal police and special constables, with whatever support is necessary and feasible from the RCMP and the Armed Services at provincial request.
- (2) Control of road traffic, except in areas damaged or covered by heavy fallout, including special measures to assist in the emergency movement of people from areas likely to be attacked or affected by heavy fallout.
- (3) Reception services, including arrangements for providing accommodation, emergency feeding and other emergency supplies and welfare services for people who have lost or left their homes or who require assistance because of the breakdown of normal facilities.
- (4) Organization and control of medical services, hospitals and public health measures.
- (5) Maintenance, clearance and repair of highways.
- (6) Organization of municipal and other services for the maintenance and repair of water and sewerage systems.
- (7) Organization of municipal and other fire fighting services, and control over and direction of these services in wartime, except in damaged or heavy fallout areas, where fire fighting services would be under the direction of the Army as part of the re-entry operation.

PART I.—OFFICIAL SOURCES OF INFORMATION

Section 1.—Books About Canada

This basic list of books about Canada, contributed by the National Library (December 1965), includes a selection of about 480 titles of publications grouped alphabetically by author and arranged under the subject classifications of Biography, Country and People, Economics, External Relations, Government and Politics, History, Literature and the Arts, and General Reference Works. The selection represents many aspects of Canadian life, emphasizes the latest editions of books published within the past ten years, and includes titles issued in either or both English and French, accompanied by the publisher's address. For additional titles, the reader should consult one or more of the bibliographical collections listed below under the heading "General Reference Works", particularly the monthly or annual editions of *Canadiana* published by the National Library.

Biography

- BARNARD, Julianne. *Mémoires Chapais*. Montréal, Fides, 1961-64. 3 v.
- BEAL, J. R. *The Pearson phenomenon*. Toronto, Longmans, 1964. 210 p.
- BEAVERBROOK, W. M. A., baron. *My early life*. Fredericton, N.B., Brunswick Press, 1965. 199 p. (An Atlantic Advocate book)
- BÉGIN, abbé Émile. *François de Laval*. Québec, Presses de l'Université Laval, 1959. 222 p.
- BENOIT, Pierre. *Lord Dorchester (Guy Carleton)*. Montréal, Éditions H.M.H., 1961. 203 p. (Figures canadiennes, 5)
- BILODEAU, Rosario. *Champlain*. Montréal, Éditions H.M.H., 1961. 198 p. (Figures canadiennes, 6)
- BISHOP, Morris. *Champlain; the life of fortitude*. Toronto, McClelland and Stewart, 1963. 308 p. (Carleton library, no. 4)
- BISHOP, W. A. *The courage of the early morning, a son's biography of a famous father: the story of Billy Bishop*. Toronto, McClelland and Stewart, 1965. 211 p.
- BOUCHARD, T. D. *Mémoires de T. D. Bouchard*. Montréal, Beauchemin, 1960. 3 v.
- BRADDON, Russell. *Roy Thomson of Fleet Street*. London, Collins, 1965. 396 p.
- BROWN, Florence M. *Breaking barriers; Eric Brown and the National Gallery*. Ottawa, Society for Art Publications, 1964. 113 p.

Section 2.—Federal Government Information Services

The chief source of statistical information on all phases of the economy of Canada is the Dominion Bureau of Statistics where the ten-year and five-year censuses of Canada are planned and statistical information of all kinds—federal and provincial—is centralized. Certain areas of effort, such as trade and commerce, customs and excise, currency and banking, navigation, transportation, radio, population and national defence are constitutionally federal affairs and on such subjects the respective departments at Ottawa are the proper sources of information with which to communicate. Other fields of effort such as the administration of lands and natural resources, education, roads and highways, and health and hospitals are the responsibility of the provinces and data may be obtained concerning the individual provincial efforts in these fields from the respective provincial government departments. However, certain federal departments are also concerned with specific aspects of these subjects and, as in the case of the Dominion Bureau of Statistics, in the co-ordination and presentation of the material for Canada as a whole. The Government of Canada, while not administering the resources within the provincial boundaries, co-operates closely with the provinces and is in a position to furnish material for Canada, especially production data on a national basis, marketing data on international, national and provincial bases, research work and experimental station data on a national basis, and also on a provincial basis from Federal Government stations located within particular provinces. In agriculture, for instance, data on the breeding of livestock and the improvement of strains, on agricultural marketing and on crop yields are cases in point; in forestry, questions on forest research, forest fire protection and reforestation offer good examples.

Certain Federal Government bodies and national agencies, because of the nature of their work and the appeal it has to broad sections of the population, are organized primarily as information or publicity agencies. Among these are: the Information Division, Department of External Affairs, which deals with questions about external affairs originating in Canada and with general requests originating abroad for information on Canada and Canadian affairs; the Trade Publicity Branch, Department of Trade and Commerce; the Information Services Division, Department of National Health and Welfare; the Canadian Broadcasting Corporation; and the National Film Board. The Departments of Agriculture, Fisheries, Forestry, Northern Affairs and National Resources, and Mines and Technical Surveys, and such agencies as the National Gallery of Canada, the National Museum of Canada, the National Library, and the National Research Council, while not thus classed, are interested in the dissemination of information to a greater extent than most of the remaining government departments, although several of the latter have publicity branches.

Thus, inquiries for information of a statistical nature should be forwarded to the Information Division, Dominion Bureau of Statistics, Ottawa. Inquiries to federal sources for information not of a statistical nature should be sent as a general rule to the individual departments and agencies of government which are listed, with their functions, at pp. 118-137 of this publication. Inquiries relating to provincial efforts may be directed to the provincial government department concerned. Inquiries about the Yukon and Northwest Territories should be addressed to the Northern Administration Branch, Department of Northern Affairs and National Resources,* Ottawa.

Section 3. —Sale of Official Publications

Under the provisions of the Public Printing and Stationery Act, the Queen's Printer, Ottawa, has charge of the sale of all official publications of Parliament and the Government of Canada that are issued to the public, as well as of the free distribution of all public documents and papers to persons and institutions (libraries) entitled by statutory provisions to

* To be changed to the Department of Indian and Northern Affairs (see p. 1162).

receive them. The regulations relating to the distribution and sale of government publications made in accordance with the provisions of Sect. 7 of the Public Printing and Stationery Act and Sect. 7(e) of the Financial Administration Act were brought up to date and approved by Treasury Board on Mar. 31, 1955.

In compliance with these regulations, the Queen's Printer issues the *Daily Checklist of Government Publications* which records for the information of the public service, libraries, etc., all Federal Government publications immediately upon release. Those authorized by law or regulation to receive free copies of government publications receive the *Daily Checklist* without charge; others desiring the service may purchase an annual subscription to be forwarded daily or in weekly batches as requested.

The Queen's Printer also issues the *Monthly Catalogue of Canadian Government Publications*, a comprehensive listing of all official publications, public documents and papers not of a confidential nature published at government expense, an *Annual Catalogue* (in January) listing all publications issued during the previous year, as well as sectional catalogues and selected titles bulletins advertising new government publications.

The Queen's Printer is the national sales agent in Canada for publications issued by the United Nations; the United Nations Educational, Scientific and Cultural Organization; the World Health Organization; the Food and Agriculture Organization; the Organization for Economic Co-operation and Development; the International Atomic Energy Agency; the International Civil Aviation Organization; the Council of Europe; the Commonwealth Economic Committee; the Organization of American States (Pan American Union); the General Agreement on Tariffs and Trade; the New Zealand Government; the International Labour Organization; the World Meteorological Organization; and the International Telecommunication Union.

Canadian Government and international organizations publications may be obtained from Queen's Printer bookstores located in Ottawa, Toronto, Montreal, Winnipeg and Vancouver (see imprint on the reverse side of the title page), or by mail from the Queen's Printer, Ottawa.

Dominion Bureau of Statistics Publications.—The Dominion Bureau of Statistics acts as the agent of the Queen's Printer with respect to the sale of DBS publications. Reports of the Bureau cover all aspects of the national economy; the *Canada Year Book* and *Official Handbook Canada* constitute authoritative compendiums of information on the institutions and economic and social development of Canada.

DBS publications are listed with their prices in the Queen's Printer's Catalogues of *Canadian Government Publications*. The DBS *Daily Bulletin* and *Weekly Bulletin*, prepared by the Information Division, are designed to serve persons wishing to keep closely informed on the full range of published information issued by the Bureau; the annual subscription price of each is \$1. Subscription orders for DBS publications or orders for single copies should be addressed to the Publications Distribution Unit, Dominion Bureau of Statistics, Ottawa, and should contain the necessary remittance in the form of a cheque or money order made payable to the Receiver General of Canada.

Provincial Government Publications.—Most provincial government publications may be obtained from the Queen's Printer of the province concerned. Inquiries should be addressed to the provincial capital cities:—

Newfoundland.....	St. John's
Prince Edward Island...	Charlottetown
Nova Scotia.....	Halifax
New Brunswick.....	Fredericton
Quebec.....	Quebec

Ontario.....	Toronto
Manitoba.....	Winnipeg
Saskatchewan.....	Regina
Alberta.....	Edmonton
British Columbia.....	Victoria

DIRECTORY OF SOURCES OF OFFICIAL INFORMATION

Although a number of references have been made throughout this volume to the Directory of Sources of Official Information, normally included in this Chapter, it has been considered advisable to omit the Directory from the current edition in view of impending changes in designation of several Federal Government Departments and the rather extensive re-arrangement of duties among them. At the time of printing, these revisions had been announced but not as yet implemented. Reference is made to the Directory in the 1965 edition at pp. 1117-1149 in which only minor changes were indicated by the end of 1965. A complete revision will appear in the 1967 issue.

PART II.—SPECIAL MATERIAL PUBLISHED IN FORMER EDITIONS OF THE CANADA YEAR BOOK

It is not possible to include in any single edition of the Year Book all articles and descriptive text of previous editions. Therefore the following list has been compiled as an index to such miscellaneous material and special articles as are not repeated in the present edition. This list links up the Year Book with its predecessors in respect of matters that have not been subject to wide change. Those Sections of Chapters, such as "Population", which are automatically revived when later census material is made available and to which adequate references are made in the text, are not listed unless they are in the nature of special contributions. The latest published article on each subject is shown, except when an earlier article includes material not repeated in the later one. When an article covers more than one subject it is listed under each appropriate heading.

The articles marked with an asterisk (*) are available in reprint form from the Information and Public Relations Division, Dominion Bureau of Statistics.

War Veterans Allowance Board.—1965. *June 3*, *Charles Henry Rennie*, Victoria, B.C.: to be again a temporary member for one year from Oct. 2, 1965. *Oct. 4*, *John Harold McDougal Dehler*, Ottawa, Ont.: to be a temporary member for one year from Oct. 15, 1965.

PART IV. —FEDERAL LEGISLATION, 1964-65

Legislation passed in the second and third sessions of the Twenty-sixth Parliament is outlined on pp. 1150-1154. Naturally in summarizing material of this kind it is not always possible to convey the full implication of the legislation. The reader who is interested in any specific Act is therefore referred to the *Statutes of Canada* in the given volume and chapter.

**Legislation of the Second Session of the Twenty-sixth Parliament,
Feb. 18, 1964 to Apr. 3, 1965**

Subject, Chapter and Date of Assent	Synopsis
13-14 ELIZ. II	
Agriculture— 1964	
12 June 18	<i>An Act to amend the Farm Credit Act</i> increases the capital of the Farm Credit Corporation permitting it to borrow up to \$600,000,000 rather than \$400,000,000 from the Consolidated Revenue Fund; the amendment also increases the limits on borrowing for a single farming enterprise under Parts II and III of the Act, permits an advance in the interest rates on the increased portion, and permits repayment to be amortized over the entire term of the loan rather than requiring greater repayments to be made during the first ten years.
28 Oct. 15	<i>An Act to amend the Crop Insurance Act</i> authorizes the establishment of a crop reinsurance plan whereby those provinces operating a crop insurance plan may, if they so desire, reinsure part of their risks under such plan.
29 Oct. 15	<i>The Farm Machinery Syndicates Credit Act</i> provides for the extension of credit to farm machinery syndicates.
Finance— 1964	
1 Mar. 30	<i>Appropriation Act No. 1, 1964</i> grants certain sums of money for the public service for the financial year ending Mar. 31, 1965.
3 Apr. 3	<i>Appropriation Act No. 3, 1964</i> grants certain sums of money for the public service for the financial year ending Mar. 31, 1964.
4 Apr. 6	<i>Appropriation Act No. 2, 1964</i> grants certain sums of money for the public service for the financial year ending Mar. 31, 1964.
5 Apr. 13	<i>Appropriation Act No. 4, 1964</i> grants certain sums of money for the public service for the financial year ending Mar. 31, 1964.
9 May 28	<i>Appropriation Act No. 5, 1964</i> grants certain sums of money for the public service for the financial year ending Mar. 31, 1965.
10 June 18	<i>An Act to amend the Bank Act and the Quebec Savings Banks Act</i> extends by one year authority to carry on business for the banks to which these Acts apply.
17 June 30	<i>Appropriation Act No. 6, 1964</i> grants certain sums of money for the public service for the financial year ending Mar. 31, 1965.
20 July 16	<i>Appropriation Act No. 7, 1964</i> grants certain sums of money for the public service for the financial year ending Mar. 31, 1965.
25 Aug. 7	<i>Appropriation Act No. 8, 1964</i> grants certain sums of money for the public service for the financial year ending Mar. 31, 1965.
26 Aug. 13	<i>The Federal-Provincial Fiscal Revision Act, 1964</i> revises certain fiscal arrangements with the provinces and adjusts fiscal arrangements and taxation provisions consequential upon the provision of youth allowances to parents resident in certain provinces.
30 Nov. 5	<i>Appropriation Act No. 9, 1964</i> grants certain sums of money for the public service for the financial year ending Mar. 31, 1965.
34 Dec. 2	<i>Appropriation Act No. 10, 1964</i> grants certain sums of money for the public service for the financial year ending Mar. 31, 1965 (Main Supply Bill).
1965	
49 Apr. 3	<i>Appropriation Act No. 1 (Interim), 1965</i> grants certain sums of money for the public service for the financial year ending Mar. 31, 1965.
50 Apr. 3	<i>Appropriation Act No. 2 (Supplementary), 1965</i> grants certain sums of money for the public service for the financial year ending Mar. 31, 1965.
Government— 1964	
31 Nov. 20	<i>The Electoral Boundaries Readjustment Act</i> provides for the establishment of Electoral Boundaries Commissions to report upon the readjustment of the representation of the provinces in the House of Commons and provides for the readjustment of such representation in accordance therewith.

**Legislation of the Second Session of the Twenty-sixth Parliament,
Feb. 18, 1964 to Apr. 3, 1965—continued**

Subject, Chapter and Date of Assent	Synopsis
Government—concl. 1965	
47 Mar. 18	<i>An Act to amend the Privileges and Immunities (United Nations) Act</i> enables Canada to accord privileges and immunities to additional international organizations of which it is a member and ensures that experts performing missions for such organizations are granted appropriate privileges and immunities when on official missions in Canada.
48 Mar. 18	<i>An Act respecting the Revised Statutes of Canada</i> authorizes the preparation and publication of a revision and consolidation of the public general statutes of Canada.
54 Apr. 3	<i>The Established Programs (Interim Arrangements) Act</i> is an Act of an interim nature respecting the operation of certain established federal-provincial conditional-grant and shared-cost programs, permitting the provinces that wish to do so to assume financial responsibility for such programs and providing for financial adjustments consequential upon such assumption of responsibility.
Justice— 1964	
14 June 18	<i>An Act to amend the Judges Act and the Exchequer Court Act</i> authorizes the appointment of, and the provision of salary for, an additional judge of the Exchequer Court of Canada to perform the duties referred to in the Dissolution and Annulment of Marriages Act (SC 1963, c. 10).
35 Dec. 18	<i>An Act to amend an Act to amend the Combines Investigation Act and the Criminal Code</i> extends for two years the moratorium which prevents the application of the Combines Investigation Act as far as the relations between fishermen of British Columbia and those who process fish are concerned.
36 Dec. 18	<i>An Act to amend the Judges Act</i> authorizes the provision of salaries for seven additional judges: three judges of the Superior Court of Quebec; one justice of appeal of the Supreme Court of Alberta; two Ontario county court judges; and one British Columbia county court judge.
1965	
46 Mar. 18	<i>An Act to amend the Penitentiary Act</i> makes express provision to cover the present practice whereby, during any period in which an appeal by a person sentenced to penitentiary is pending or he is awaiting a medical certificate, he shall be held in custody in a place other than a penitentiary.
53 Apr. 3	<i>An Act to amend the Criminal Code (Habeas Corpus)</i> provides for the right of appeal in habeas corpus proceedings.
Labour— 1965	
38 Mar. 18	<i>The Canada Labour (Standards) Code</i> establishes a national minimum wage of \$1.25 an hour, a standard eight-hour day and a forty-hour week, annual vacations with pay and seven statutory holidays for works under federal jurisdiction.
National Defence— 1964	
21 July 16	<i>An Act to amend the National Defence Act</i> replaces the Chairman of the Chiefs of Staff Committee and the Chiefs of the Naval Staff, General Staff and Air Staff with an authority to be charged with all the functions, powers and duties of the persons being replaced, to be known as the Chief of the Defence Staff; consequential amendments are made to the portions of the Act concerned.
Revenue— 1964	
7 May 21	<i>An Act to amend the Customs Tariff</i> implements the Budget resolutions relating to the Customs Tariff.
8 May 21	<i>An Act to amend the Estate Tax Act</i> provides that the estate tax will be reduced by 75 p.c. in provinces that levy their own succession duty; raises the limit of funds available to beneficiaries from any one bank to \$2,500; and adjusts certain settlements and dispositions in the Province of Quebec.
11 June 18	<i>The Crown Corporations (Provincial Taxes and Fees) Act</i> authorizes the payment of certain provincial taxes and fees by Crown corporations.

**Legislation of the Second Session of the Twenty-sixth Parliament,
Feb. 18, 1964 to Apr. 3, 1965—continued**

Subject, Chapter and Date of Assent	Synopsis
Revenue—concluded	
13 1964 June 18	<i>An Act to amend the Income Tax Act</i> contains a number of technical and other revisions including the allowance of a deduction in 1964 to parents of children aged 16 and 17 years and the modification of the definition of a child qualified for family allowance.
37 1965 Mar. 18	<i>The Canada-Japan Income Tax Convention Act, 1965</i> implements a Convention between Canada and Japan for the avoidance of double taxation with respect to income tax and amends the existing Agreement and Conventions between Canada and Denmark, Finland and the Netherlands with respect to income tax.
Transportation—	
2 1964 Mar. 30	<i>An Act respecting the Trans-Canada Air Lines Act</i> changes the name of Trans-Canada Air Lines and Lignes aériennes Trans-Canada to "Air Canada".
6 May 21	<i>The Blue Water Bridge Authority Act</i> authorizes the establishment of a Blue Water Bridge Authority to operate and maintain the Canadian portion of the international bridge connecting Canada and the United States across the St. Clair River.
16 May 19	<i>The Ste-Foy-St-Nicolas Bridge Act</i> authorizes the construction and maintenance of a bridge across the St. Lawrence River between the City of Ste-Foy and the municipality of St-Nicolas in the Province of Quebec.
32 May 7	<i>The Harbour Commissions Act</i> provides for the establishment of new harbour commissions, defining the limits of the harbour and the authorities having power to appoint the members of a commission; existing harbour commissions may be brought under the standard Act as circumstances warrant.
33 July 22	<i>An Act to repeal certain Acts of the Province of Newfoundland respecting Harbours and Pilotage.</i>
39 1965 Mar. 18	<i>An Act to amend the Canada Shipping Act</i> gives effect to the International Convention for the Safety of Life at Sea, 1960.
41 Mar. 18	<i>The Canadian National Railways Financing and Guarantee Act, 1964</i> authorizes the provision of money to meet certain capital expenditures of the Canadian National Railways System for the period Jan. 1, 1964 to June 30, 1965, and the guarantee of certain securities to be issued by the CNR.
Welfare—	
23 1964 July 16	<i>The Youth Allowances Act</i> provides for the payment to a parent of a dependent youth aged 16 or 17 years of a monthly allowance of \$10.
45 1965 Mar. 18	<i>An Act to amend the Merchant Seamen Compensation Act</i> increases the benefits under the Act, bringing them into line with the level of benefits under the workmen's compensation Acts of the Maritime Provinces.
51 Apr. 3	<i>The Canada Pension Plan</i> establishes a comprehensive program of old age pensions and supplementary benefits in Canada payable to and in respect of contributors.
Miscellaneous—	
15 1964 June 18	<i>An Act to amend the National Housing Act, 1954</i> , among other revisions, provides further assistance to provinces and municipalities carrying out urban renewal programs; authorizes loans to provincially or municipally owned agencies for acquiring lands for and constructing public housing projects; increases from \$2,000,000,000 to \$2,500,000,000 the amount provided for direct loaning by Central Mortgage and Housing Corporation; and increases from \$100,000,000 to \$150,000,000 the amount of loans for the construction of university housing projects.
18 June 30	<i>An Act to amend the Export Credits Insurance Act</i> exempts the Export Credits Insurance Corporation from the obligation of paying income tax; authorizes the insurance against loss of equipment employed in rendering technical services outside Canada; authorizes the Corporation to take on additional insurable business of Canadian exporters; raises the allowable amount of liability of the Corporation under contracts of insurance from \$400,000,000 to \$600,000,000; and adjusts other financial arrangements.

**Legislation of the Second Session of the Twenty-sixth Parliament,
Feb. 18, 1964 to Apr. 3, 1965—concluded**

Subject, Chapter and Date of Assent	Synopsis
Miscellaneous—conc.	
1964	
19 June 30	<i>The Roosevelt Campobello International Park Commission Act</i> embodies the necessary Canadian federal legislation required for the joint administration, by international commission, of the Roosevelt Campobello International Park in New Brunswick.
22 July 16	<i>The Territorial Sea and Fishing Zones Act</i> establishes, on proclamation, the fishing zones of Canada at 12 miles from the coastline and authorizes the application of the straight base line system to the Canadian coastline.
24 July 28	<i>The Canada Student Loans Act</i> facilitates the making of loans to students by guaranteeing bank loans for this purpose of not more than \$1,000 to a student in one academic year, and a total of \$5,000 to that student over a five-year period.
1965	
40 Mar. 18	<i>An Act to amend certain Acts administered in the Department of Insurance</i> amends four Acts (the Canadian and British Insurance Companies Act, the Foreign Insurance Companies Act, the Trust Companies Act and the Loan Companies Act) for the purposes of expanding the investment powers of federally incorporated insurance and loan and trust companies and retaining in Canada ownership and control of those federally incorporated companies that still remain in Canadian hands.
42 Mar. 18	<i>An Act to amend the Coal Production Assistance Act</i> extends to Oct. 31, 1969 the period during which coal assistance loans may be made.
43 Mar. 18	<i>An Act to amend the Corporations and Labour Unions Returns Act</i> permits the elimination of duplication in the filing of returns to two separate government bodies and facilitates more effective processing of corporation financial statistics.
44 Mar. 18	<i>The Geneva Conventions Act</i> approves the Geneva Conventions for the Protection of War Victims, signed at Geneva Aug. 12, 1949.
52 Apr. 3	<i>An Act to amend the Companies Act</i> changes the name of the Act to the Canada Corporations Act and includes extensive amendments to company legislation in order to bring it up to date and to meet present-day requirements.

**Legislation of the Third Session of the Twenty-sixth Parliament,
Apr. 5, 1965 to June 30, 1965**

Subject, Chapter and Date of Assent	Synopsis
14 ELIZ. II	
Finance—	
1 June 2	<i>Appropriation Act No. 3, 1965</i> grants certain sums of money for the public service for the financial year ending Mar. 31, 1966.
6 June 23	<i>Appropriation Act No. 4, 1965</i> grants certain sums of money for the public service for the financial year ending Mar. 31, 1966.
10 June 30	<i>Appropriation Act No. 5, 1965</i> grants certain sums of money for the public service for the financial year ending Mar. 31, 1966.
11 June 30	<i>Appropriation Act No. 6, 1965</i> grants certain sums of money for the public service for the financial year ending Mar. 31, 1966.
Government—	
4 June 2	<i>An Act to make provision for the retirement of members of the Senate</i> places at 75 years the age at which a Senator shall cease to hold his place in the Senate and provides for retiring allowances on a contributory basis.
5 June 2	<i>An Act to amend certain Acts respecting the superannuation of persons employed in the Public Service, members of the Canadian Forces and members of the Royal Canadian Mounted Police</i> relates mainly to the adjustment of the Superannuation Account, required as a result of any salary increase.

**Legislation of the Third Session of the Twenty-sixth Parliament,
Apr. 5, 1965 to June 30, 1965—concluded**

Subject, Chapter and Date of Assent	Synopsis
Housing—	
3 June 2	<i>An Act to amend the National Housing Act, 1954</i> increases from \$6,000,000,000 to \$8,500,000,000 the maximum of all loans insured under the Act, from \$2,500,000,000 to \$3,250,000,000 the amount available for direct borrowing, and from \$100,000,000 to \$300,000,000 the amount available for urban renewal projects.
8 June 23	<i>An Act to amend the Central Mortgage and Housing Corporation Act</i> provides for the appointment of two additional vice-presidents, and certain amendments to the Act consequential thereon.
Revenue—	
2 June 2	<i>An Act to amend an Act to amend the Excise Tax Act</i> removes the deadline date of Dec. 31, 1964, in the case of a refund of or deduction from tax or payment of an amount equal to tax in respect of designated goods.
16 June 30	<i>An Act to amend the Customs Act</i> permits the acceptance of a bond or other security as guarantee of payment of duty; permits the reduction of value for duty in certain circumstances; establishes a procedure for determining the value for duty of goods shipped indirectly to Canada; and permits the setting of rates of duty on goods of a foreign government that are sold in Canada on behalf of that government.
17 June 30	<i>An Act to amend the Customs Tariff</i> implements the Budget resolutions relating to the Customs Tariff.
18 June 30	<i>An Act to amend the Income Tax Act and the Federal-Provincial Fiscal Arrangements Act</i> provides for a 10-p.c. reduction in income tax payable by individuals and for consequential changes in the Federal-Provincial Fiscal Arrangements Act; other provisions relate to exemptions and deductions permissible in the computation of taxable income and to expenditures of a taxpayer for advertising space in a non-Canadian newspaper or periodical.
Veterans—	
15 June 30	<i>An Act to amend the Children of War Dead (Education Assistance) Act</i> provides for an increase from \$25 to \$35 in the monthly allowance paid to a student and provides that when the rate of pension payable to an orphan under the Pension Act is changed there be a corresponding change in the additional amount paid to a student after he has reached 21 years of age.
19 June 30	<i>An Act to amend the Veterans' Land Act</i> extends many provisions of the Act in order to serve the needs of veterans already settled on farms, small holdings and other properties, makes available increased loan amounts for veterans who wish to become established under the provisions of the Act and also includes improved administration provisions.
20 June 30	<i>An Act to amend the War Veterans Allowance Act, 1952</i> allows for further exemptions in property and income and makes certain administrative changes.
Miscellaneous—	
7 June 23	<i>An Act to amend the Bank Act and the Quebec Savings Banks Act</i> extends to Dec. 31, 1965 the authority to carry on business for the banks to which these Acts apply.
9 June 23	<i>An Act to amend the Fisheries Improvement Loans Act</i> increases the maximum loan amount from \$4,000 to \$10,000, increases the repayment period from eight to ten years, and extends the period during which loans may be made to June 30, 1970.
12 June 30	<i>The Area Development Incentives Act</i> provides incentives for the development of industrial employment opportunities in designated areas and effects certain related amendments to the Income Tax Act.
13 June 30	<i>An Act to amend the Army Benevolent Fund Act</i> increases the rate of interest payable on the minimum balance to the credit of the Fund and provides for periodic adjustment of this rate.
14 June 30	<i>An Act respecting the construction of a line of railway in the Province of Ontario by Canadian National Railway Company from a point at or near mileage 3.2 of the Froomfield Spur of the Canadian National Railway near Sarnia in a southerly direction for a distance of approximately 12 miles to the property of Canadian Industries Limited in Sombra Township in the County of Lambton.</i>

PART V.—CANADIAN CHRONOLOGY

Events in the general chronology from 1497 to 1866 are given in the 1951 Year Book, pp. 46-49; from 1867 to 1953 in the 1954 Year Book, pp. 1259-1264; and annually from that year on in successive editions. A reprint entitled *Canadian Chronology, 1497-1960* is also available from the Dominion Bureau of Statistics. The following listing covers the year 1965 and it should be mentioned that certain of the dates given therein are approximate. References regarding changes in federal and provincial legislatures or ministries are not included but may be found in Chapter II on Constitution and Government or in the Appendix.

1965

January: *Jan. 1*, External Affairs Minister Martin announced relief assistance of \$40,000 to India and Ceylon following cyclone and tidal wave disaster. *Jan. 3*, Death of R. Watson Sellar, former Auditor General of Canada, in Ottawa. *Jan. 4*, Montreal newspaper *La Presse* resumed publication after a seven-month strike. *Jan. 5*, Commonwealth officials met in London to consider the structure and functions of the proposed Commonwealth Secretariat. *Jan. 6*, Release of letters from Mrs. Jacqueline Kennedy and Mrs. Rose Kennedy thanking Canada for naming a mountain in tribute to the late U.S. President John F. Kennedy and for \$100,000 contribution to the John F. Kennedy Memorial Library. The Dominion Bureau of Statistics was designated a "department" for the purposes of the Civil Service Act and the Financial Administration Act, and the Dominion Statistician the Deputy Head of the Department. Formation announced of a multi-national anti-submarine destroyer squadron under NATO, in which Canada will participate. *Jan. 7*, President Sukarno announced Indonesia's intention to withdraw from the UN; official notification given to Secretary-General U Thant *Jan. 21*, Agreement between Canada and the Malagasy Republic to establish diplomatic relations announced. *Jan. 9*, Mountain slide into a half-mile-wide valley near Hope, B.C., covered Hope-Princeton Highway and claimed four lives. *Jan. 11*, Presentation to Governor General Vanier of a gold medallion commemorating 100 years of Italian settlement in Canada by Dan Iannuzzi of Montreal, Secretary of the Canadian-Italian Centennial Committee. First report of the Economic Council of Canada, appointed Sept. 12, 1963, published. Ceremonies held in Kingston, Ont., marking the sesquicentennial of the birth of Sir John A. Macdonald, Canada's first Prime Minister. *Jan. 13*, External Affairs Minister Orlich announced that the Toronto Symphony Orchestra, the Royal Winnipeg Ballet, le Théâtre du Nouveau Monde and Les Feux Follets had accepted a Government invitation to perform in the Commonwealth Arts Festival in Britain, Sept. 16-Oct. 2. Seven lives lost in massive avalanche at Ocean Falls, B.C. *Jan. 16*, An agreement eliminating all tariffs on new cars and new car parts signed by Prime Minister Pearson and U.S. President Johnson. *Jan. 17*, Death of Senator Austin C. Taylor of Salisbury, N.B. *Jan. 18*, Agreement between Canada and Nepal to establish diplomatic relations announced. *Jan. 20*, Legislation proclaimed providing for the establishment of Electoral Boundaries Commissions to report on the readjustment of the representation of the provinces in the House of Commons; members named. Resignation of Hon. Yvon Dupuis, Minister without Portfolio; arraigned Mar. 4 in St. Jean, Que., on charges of having accepted \$10,000 during efforts in 1961 to obtain a racetrack franchise in his riding from the Quebec Government. Hon. Mr. Justice François Chevalier, Hull, Que., appointed mediator of the labour dispute between Actors' Equity and the Montreal-based Union des Artistes (CLC) bargaining for entertainment people in the Montreal area; under terms of agreement,

June 30, jurisdiction to be divided on the basis of English and French expression. *Jan. 24*, Death of Sir Winston Churchill; state funeral Jan. 31. *Jan. 25*, Military assistance to Malaysia amounting to \$4,000,000 announced, to include four transport aircraft and parts, 250 motorcycles and pilot and cadet training facilities. *Jan. 28*, Proclamation of National Flag of Canada signed by H.M. Queen Elizabeth at Buckingham Palace.

February: Under extended aid program, Canada agreed to give Trinidad and Tobago \$3,000,000 in grants and loans over a 50-year period at low interest. *Feb. 1-26*, Dispute in Quebec re teachers' salaries involved about 12 district school boards, 506 teachers and 17,000 French-speaking students. *Feb. 1*, Hook-up of Canadian TWX (teletypewriter exchange service) with more than 100 countries, giving access to 128,000 overseas stations in addition to the more than 60,000 subscribers to the TWX network in the U.S., making it the largest dial-and-type network in the world. Discovery of five decomposed bodies near Quebec City linked with underworld activities including fraudulent bankruptcies and arson. Oct. 5, The first foreign industrial company signed by Expo 67; the Watchmakers of Switzerland will erect 14 clock towers. Oct. 6, Report of the Bladen Commission, appointed in 1964 by the Association of Universities and Colleges of Canada, released; recommendations included the raising of university grants, increased aid to students and appointment of a federal minister of higher education. Oct. 7, Report of Mr. Justice Kelly, appointed Aug. 13 as a one-man Royal Commission to investigate stock market activities of Windfall Oils and Mines Ltd., released; recommendations included changes in the conduct of business in the Toronto Stock Exchange and establishment of the Ontario Securities Commission as an independent agency, and findings included condemnation of the Director of the Commission and the promoters of Windfall; George and Viola MacMillan charged (Oct. 7) with fraud stemming from the rise and fall of Windfall stocks and John Hunter Campbell, former Director of the Ontario Securities Commission, charged (Oct. 12) with breach of trust arising out of the Windfall report. Resignation of Frank H. Hall, leader of Canada's non-operating railway unions for 20 years. Oct. 8, Announcement of Royal approval of Manitoba's provincial flag—a Red Ensign bearing the provincial coat-of-arms. Death in New York of Thomas Costain, novelist and historian born in Brantford, Ont., and former editor of the *Guelph Mercury* and director of *Maclean's Magazine*. Oct. 13, Announcement of the establishment of a Crown corporation to assist the Canadian private film industry in the production of feature films. Canada and Ethiopia agreed to establish diplomatic relations. Oct. 16, Official opening of the \$13,000,000 Macdonald-Cartier Bridge spanning the Ottawa River by Prime Minister Pearson, Premier Robarts of Ontario and Premier Lesage of Quebec. Oct. 16, Singapore admitted to membership in the Commonwealth, bringing membership to 22 countries. Oct. 18, Abraham Allen Okpik of Yellowknife, N.W.T., became the first Eskimo to be appointed to the Northwest Territories Council. Oct. 19, André Lamothe, Ovila Boulet, Jean-Jacques Gagnon and Fernand Quirion found criminally responsible in four arson-racket killings believed to have been staged by the underworld to stop investigations by the Quebec Department of Justice. Oct. 20, Two cornerstones, one in English and the other in French, laid by Premier Robarts of Ontario and Premier Lesage of Quebec for Champlain College, the first building on the site of Trent University, Peterborough, Ont. Oct. 21, The \$10,500,000 Concordia Bridge, linking Montreal Island with the man-made islands of the Expo 67 site, officially opened by Governor General Vanier. Oct. 27, Federal contribution to the UN High Commission for Refugees increased to \$350,000, subject to the approval of Parliament, making Canada the second largest contributor.

November: Nov. 1, Heavy speculation on the Vancouver Stock Exchange in stocks of companies with claims in the Pine Point area of the Northwest Territories. Nov. 2, The first contract for construction of the causeway linking Prince Edward Island with mainland New Brunswick awarded; causeway, bridge and tunnel to be completed in late 1970. Nov. 4, Death of Senator Norman Platt Lambert in Ottawa. Nov. 8, Twenty-seventh General Election; Prime Minister Pearson's Liberal government returned to office; party standing—131 Liberal, 97 Progressive Conservative, 21 New Democratic Party, 9 Ralliement chrétien, 5 Social Credit and 2 Independent. Nov. 9, International

power failure extending from the Atlantic Coast to Chicago and from Florida into southern Ontario lasted up to 12 hours; investigation traced the fault to failure of a relay device in Ontario Hydro's generating station at Queenston. Nov. 11, Hon. Walter L. Gordon resigned as Minister of Finance. Rhodesia declared unilaterally its independence from Britain; Prime Minister Wilson announced sanctions against Rhodesia; Prime Minister Pearson confirmed that Canada does not recognize the unilateral declaration of Prime Minister Ian Smith or the independent state of Rhodesia. Nov. 12, The S.S. *Yarmouth Castle*, a cruise ship under Panamanian registry en route from Miami to Nassau, burned and sank with a loss of 90 persons, including two Canadians. The UN Security Council approved unanimously a resolution condemning the declaration of independence by the racist minority government in Rhodesia, calling on all countries to withhold aid from and recognition of the Smith regime. Lucien Rivard sentenced to 20 years in prison and fined \$20,000 on two narcotics convictions in Laredo, Texas. Nov. 12-20, Royal Agricultural Winter Fair held in Toronto; Larry C. Hixt of Beiseker, Alta., won world championship wheat title and Bert Tupling of Honeywood, Ont., won Queen's Guineas, top prize for 4-H Club members, for his Hereford steer. Nov. 13, Manitoba Hydro's \$140,000,000 power generating station officially opened at Grand Rapids. Nov. 16, Dr. Albert W. Trueman received diploma of honor awarded by the Canadian Conference of the Arts; presented by Governor General Vanier. Nov. 17, Prime Minister Pearson received the Family of Man Award for 1965 from the Protestant Council of Churches in New York. The first general cultural agreement between France and Canada signed by French Ambassador to Canada and Canada's Secretary of State for External Affairs. Nov. 18, The Vanier Medal of the Canadian Institute of Public Administration presented to Robert B. Bryce, Deputy Minister of Finance, by Governor General Vanier. Nov. 22, Canada Council medals presented to Yousuf Karsh, photographer; Gustave Lanctot, historian; Alfred Pelland, painter; and Walter B. Herbert, Canada Foundation Director. Molson Prizes presented to Jean Gascon, actor-director; and Frank Scott, constitutional expert and poet. Nov. 23, Appointment announced of Mme Georges P. Vanier as Chancellor of the University of Ottawa. Nov. 25, Lt.-Col. Terrance D. Lafferty of Kingston, C.O. of the 1st Battalion, the Royal Canadian Regiment, presented with the Ring of Honour by the City of Soest, Germany, for his service in creating good relations between the men of his Battalion and the people of Soest. Death of Gwethalyn Graham of Montreal, author of two Governor General's award-winning novels. Nov. 26, France launched its first satellite from a station in Algiers. Death of Senator Thomas Harold Wood of Regina. Nov. 27, The Grey Cup, symbol of Canadian professional football supremacy, won by Hamilton Tiger Cats over Winnipeg Blue Bombers by a score of 22-16. Nov. 28, Prime Minister Pearson and Mrs. Pearson arrived in the Caribbean for a vacation combined with official visits to Jamaica and Trinidad and Tobago. Nov. 29, Fifteen persons arrested in Quebec Province in connection with a multi-million dollar auto theft ring.

December: Dec. 5, The Bank of Canada announced an immediate increase in the bank rate to 13½ p.c. from 12½ p.c. Dec. 9, Resignation of Anastas Mikoyan, President of the U.S.S.R.; succeeded by Nikolai Podgorny. Dec. 15, First rendezvous of two spacecraft in flight accomplished by U.S. astronauts Schirra and Stafford in *Gemini 6* and Borman and Lovell in *Gemini 7* on the 11th day of the latter's 14 days in space. Dec. 15-18, Canada agreed to act as diplomatic intermediary between Britain and the United Arab Republic in Cairo and

as a protecting power for Tanzania in London and for Britain in Dar es Salaam; the UAR and Tanzania are among seven African states, two of them Commonwealth members, which broke off relations with Britain in protest against British failure to oust the white-minority regime in Rhodesia. *Dec. 16*, Ghana broke off diplomatic relations with Britain over the Rhodesian crisis. Secretary of State Maurice Lamontagne and Postmaster General René Tremblay resigned from the Federal Cabinet. *Dec. 17*, Rhodesian currency frozen by Swiss banks. Prime Minister Pearson announced several changes in designation of government departments and extensive rearrangement of duties in connection therewith. *Dec. 19*, Prime Minister Wilson of Britain visited Ottawa for talks with Prime Minister Pearson. General Charles de Gaulle won a second seven-year term as President of France. *Dec. 20*, Announcement of Canadian participation in airlift to supply Zambia with the necessities cut off by Rhodesian action, and of the decision to place an embargo on

the export of oil and oil products from Canada to Rhodesia. A Canadian member of a four-man survey party captured by Viet Cong guerrillas near Saigon, Otto Scholton of Burnaby, B.C., killed by his captors. Irish Hospitals Sweepstakes tickets valued at \$17,000,000 seized by police in the Montreal area. *Dec. 22*, Report of the Organizing Committee for the Company of Young Canadians released; recommendations include the setting up of the Company as a Crown corporation, and the choosing of volunteers for their ability to serve. *Dec. 29*, Canada to provide \$15,000,000 worth of food to famine-stricken India in addition to the \$10,000,000 worth of wheat already shipped under the 1965-66 food aid program. *Dec. 30*, Mme Georges P. Vanier, wife of the Governor General and a moving force behind the Vanier Institute of the Family, chosen Canada's woman of the year for 1965 in the annual Canadian Press year-end poll. Miss Petra Burka of Toronto, 19-year-old figure-skating star, voted Canada's top female athlete for the second consecutive year.

APPENDIX

Certain information given in Chapter II on Constitution and Government (closed off Apr. 30, 1965) is brought up to the date of going to press (Dec. 31, 1965-Jan. 31, 1966) in this Appendix.

Page 76, Table 4

Members of the Nineteenth Ministry, as announced Dec. 17, 1965 following the General Election of Nov. 8, 1965, were as follows, according to precedence:—

<i>Office</i>	<i>Occupant</i>
Prime Minister.....	Rt. Hon. LESTER BOWLES PEARSON
Secretary of State for External Affairs.....	Hon. PAUL JOSEPH JAMES MARTIN

Minister without Portfolio.....	Hon. JOHN NAPIER TURNER

Page 76

Parliamentary Secretaries appointed Jan. 9, 1966 were as follows:—

<i>Secretary</i>	<i>Minister</i>
JOHN MATHESON.....	} Prime Minister
PIERRE ELLIOT TRUDBAU.....	
BRUCE S. BEER.....	
JOHN C. MUNRO.....	
DONALD S. MACDONALD.....	} Agriculture Citizenship and Immigration (later to be Manpower) External Affairs Finance and Receiver General Fisheries Labour Mines and Technical Surveys (later to be Resources and Energy) National Health and Welfare National Revenue Northern Affairs and National Resources (later to be Indian and Northern Affairs) Public Works Secretary of State Trade and Commerce Transport
J. J. JEAN CHRÉTEN.....	
CHARLES R. M. GRANGER.....	
BRYCE S. MACKASEY.....	
JACK DAVIS.....	
MARGARET RIDEOUT.....	
JAMES E. WALKER.....	
STANLEY HADASZ.....	
JOHN B. STEWART.....	
ALBERT BÉCHARD.....	
JEAN-CHARLES CANTIN.....	
JAMES A. BYRNE.....	

When announcing the above appointments, the Prime Minister gave notice of intention to seek the authority of Parliament to appoint six additional Parliamentary Secretaries.

Pages 77 and 78, Table 5

Privy Council appointments from Apr. 30 to Dec. 31, 1965 are given in the Register of Official Appointments, p. 1143.

Page 78, Table 6

Third Session of the 26th Parliament adjourned June 30, 1965.

26th Parliament dissolved Sept. 8, 1965.

First Session of the 27th Parliament opened Jan. 18, 1966.

Pages 80-81, Table 8

Senate appointments, Apr. 30, 1965 to Jan. 31, 1966:—

HON. WILLIAM MOORE BENIDICKSON.....	Ontario
HON. ALEXANDER HAMILTON McDONALD.....	Saskatchewan

Senate separations, Apr. 30, 1965 to Jan. 31, 1966:—

Retired—

HON. THOMAS VINCENT GRANT.....	Prince Edward Island
HON. JOSEPH WILLIE COMEAU.....	Nova Scotia
HON. WISHART McLEA ROBERTSON.....	Nova Scotia
HON. LEONARD DAVID SWEZEY TREMBLAY.....	Quebec
HON. JOHN ALEXANDER BUCHANAN.....	Alberta
HON. J. WESLEY STAMBAUGH.....	Alberta
HON. NANCY HODGES.....	British Columbia

Deceased—

HON. NORMAN P. LAMBERT.....	Ontario
HON. THOMAS H. WOOD.....	Saskatchewan

At Jan. 31, 1966, there were 14 vacancies in the Senate.
